tagpdf – A package to experiment with pdf tagging[*]

Ulrike Fischer[†]

Released 2023-08-04

Contents

III   The tagpdf-tree module
Commands trees and main dictionaries
Part of the tagpdf package   **50**

IV   The tagpdf-mc-shared module
Code related to Marked Content (mc-chunks), code shared by
all modes
Part of the tagpdf package   **60**

V   The tagpdf-mc-generic module
Code related to Marked Content (mc-chunks), generic mode
Part of the tagpdf package   **68**

VI   The **tagpdf-mc-luacode** module
Code related to Marked Content (mc-chunks), luamode-specific
Part of the tagpdf package   81

VII   The **tagpdf-struct** module
Commands to create the structure
Part of the tagpdf package   90

VIII   The **tagpdf-luatex.def**
Driver for luatex
Part of the tagpdf package   122

\ref_value:nnn	\ref_value:nnn{⟨*label*⟩}{⟨*attribute*⟩}{⟨*fallback default*⟩}

This is a temporary definition which will have to move to l3ref. It allows to locally set a default value if the label or the attribute doesn't exist. See issue #4 in Accessible-xref.

\tag_stop_group_begin:	We need commands to stop tagging in some places. They simply switches the two local booleans. The grouping commands can be used to group the effect.
\tag_stop_group_end:	
\tag_stop:	
\tag_start:	
\tagstop	
\tagstart	

\tag_stop:n	\tag_stop:n{⟨*label*⟩}
\tag_start:n	\tag_start:n{⟨*label*⟩}

This commands are intended as a pair. The start command will only restart tagging if the previous stop command with the same label actually stopped tagging.

activate-space␣(setup-key)	activate-space activates the additional parsing needed for interword spaces. It is not documented, the parsing is currently implicitly activated by the known key interwordspace, as the code will perhaps move to some other place, now that it is better separated.

activate-mc␣(setup-key)	
activate-tree␣(setup-key)	
activate-struct␣(setup-key)	
activate-all␣(setup-key)	

Keys to activate the various tagging steps

no-struct-dest␣(setup-key)	The key allows to suppress the creation of structure destinations

log␣(setup-key)	The log takes currently the values none, v, vv, vvv, all. More details are in tagpdf-checks.

tagunmarked␣(setup-key)	This key allows to set if (in luamode) unmarked text should be marked up as artifact. The initial value is true.

tabsorder␣(setup-key)	This sets the tabsorder on a page. The values are row, column, structure (default) or none. Currently this is set more or less globally. More finer control can be added if needed.

tagstruct	These are attributes used by the label/ref system.
tagstructobj	
tagabspage	
tagmcabs	
tagmcid	

1 Initialization and test if pdfmanagement is active.

```
1  ⟨@@=tag⟩
2  ⟨*package⟩
3  \ProvidesExplPackage {tagpdf} {2023-08-04} {0.98k}
4    { A package to experiment with pdf tagging }
5
6  \bool_if:nF
7    {
8      \bool_lazy_and_p:nn
9        {\cs_if_exist_p:N \pdfmanagement_if_active_p:}
10       { \pdfmanagement_if_active_p: }
11   }
12   {  %error for now, perhaps warning later.
13     \PackageError{tagpdf}
14       {
15         PDF~resource~management~is~no~active!\MessageBreak
16         tagpdf~will~no~work.
17       }
18       {
19         Activate~it~with \MessageBreak
20         \string\RequirePackage{pdfmanagement-testphase}\MessageBreak
21         \string\DocumentMetadata{<options>}\MessageBreak
22         before~\string\documentclass
23       }
24   }
25 ⟨/package⟩
```

```
<*debug>
26 \ProvidesExplPackage {tagpdf-debug} {2023-08-04} {0.98k}
27   { debug code for tagpdf }
28 \@ifpackageloaded{tagpdf}{}{\PackageWarning{tagpdf-debug}{tagpdf~not~loaded,~quitting}\endinpu
```

</debug> We map the internal module name "tag" to "tagpdf" in messages.

```
29 ⟨*package⟩
30 \prop_gput:Nnn \g_msg_module_name_prop { tag }{ tagpdf }
31 ⟨/package⟩
```

Debug mode has its special mapping:

```
32 ⟨*debug⟩
33 \prop_gput:Nnn \g_msg_module_type_prop { tag / debug} {}
34 \prop_gput:Nnn \g_msg_module_name_prop { tag / debug }{tagpdf~DEBUG}
35 ⟨/debug⟩
```

2 base package

To avoid to have to test everywhere if tagpdf has been loaded and is active, we define a base package with dummy functions

```
36 ⟨*base⟩
37 \ProvidesExplPackage {tagpdf-base} {2023-08-04} {0.98k}
38   {part of tagpdf - provide base, no-op versions of the user commands }
39 ⟨/base⟩
```

3   Package options

There are only two options to switch for luatex between generic and luamode, TODO
try to get rid of them.

```
40 ⟨∗package⟩
41 \bool_new:N\g__tag_mode_lua_bool
42 \DeclareOption {luamode}  { \sys_if_engine_luatex:T { \bool_gset_true:N \g__tag_mode_lua_bool
43 \DeclareOption {genericmode}{ \bool_gset_false:N\g__tag_mode_lua_bool }
44 \ExecuteOptions{luamode}
45 \ProcessOptions
```

4   Packages

We need the temporary version of l3ref until this is in the kernel.

```
46 \RequirePackage{l3ref-tmp}
```

To be on the safe side for now, load also the base definitions

```
47 \RequirePackage{tagpdf-base}
48 ⟨/package⟩
```

The no-op version should behave a near enough to the real code as possible, so we define
a command which a special in the relevant backends:

```
49 ⟨∗base⟩
50 \AddToHook{begindocument}
51  {
52   \str_case:VnF \c_sys_backend_str
53    {
54     { luatex  } { \cs_new_protected:Npn \__tag_whatsits: {} }
55     { dvisvgm } { \cs_new_protected:Npn \__tag_whatsits: {} }
56    }
57    {
58     \cs_new_protected:Npn \__tag_whatsits: {\tex_special:D {} }
59    }
60  }
61 ⟨/base⟩
```

4.1   a LastPage label

See also issue #2 in Accessible-xref

__tag_lastpagelabel:

```
62 ⟨∗package⟩
63  \cs_new_protected:Npn \__tag_lastpagelabel:
64    {
65     \legacy_if:nT { @filesw }
66       {
67        \exp_args:NNnx \exp_args:NNx\iow_now:Nn \@auxout
68          {
69           \token_to_str:N \newlabeldata
70            {__tag_LastPage}
71            {
72             {abspage} { \int_use:N \g_shipout_readonly_int}
73             {tagmcabs}{ \int_use:N \c@g__tag_MCID_abs_int }
```

```
74                          {tagstruct}{\int_use:N \c@g__tag_struct_abs_int }
75                      }
76                  }
77              }
78          }
79
80      \AddToHook{enddocument/afterlastpage}
81          {\__tag_lastpagelabel:}
```

(*End of definition for* `\__tag_lastpagelabel:`*.*)

`\ref_value:nnn` This allows to locally set a default value if the label or the attribute doesn't exist.

```
82      \cs_if_exist:NF \ref_value:nnn
83          {
84              \cs_new:Npn \ref_value:nnn #1#2#3
85                  {
86                      \exp_args:Nee
87                          \__ref_value:nnn
88                              { \tl_to_str:n {#1} } { \tl_to_str:n {#2} } {#3}
89                  }
90              \cs_new:Npn \__ref_value:nnn #1#2#3
91                  {
92                      \tl_if_exist:cTF { g__ref_label_ #1 _ #2 _tl }
93                          { \tl_use:c { g__ref_label_ #1 _ #2 _tl } }
94                          {
95                              #3
96                          }
97                  }
98          }
```

(*End of definition for* `\ref_value:nnn`*. This function is documented on page* *6*.)

5 Variables

`\l__tag_tmpa_tl`
`\l__tag_tmpb_tl`
`\l__tag_get_tmpc_tl`
`_tag_get_parent_tmpb_tl`␣␣␣␣`\l_tag_tmpa_str`
`\l__tag_tmpa_prop`
`\l__tag_tmpa_seq`
`\l__tag_tmpb_seq`
`\l__tag_tmpa_clist`
`\l__tag_tmpa_int`
`\l__tag_tmpa_box`
`\l__tag_tmpb_box`

A few temporary variables

```
99   \tl_new:N     \l__tag_tmpa_tl
100  \tl_new:N     \l__tag_tmpb_tl
101  \tl_new:N     \l__tag_get_tmpc_tl
102  \tl_new:N     \l__tag_get_parent_tmpa_tl
103  \tl_new:N     \l__tag_get_parent_tmpb_tl
104  \str_new:N    \l__tag_tmpa_str
105  \prop_new:N   \l__tag_tmpa_prop
106  \seq_new:N    \l__tag_tmpa_seq
107  \seq_new:N    \l__tag_tmpb_seq
108  \clist_new:N  \l__tag_tmpa_clist
109  \int_new:N    \l__tag_tmpa_int
110  \box_new:N    \l__tag_tmpa_box
111  \box_new:N    \l__tag_tmpb_box
```

(*End of definition for* `\l__tag_tmpa_tl` *and others.*)

Attribute lists for the label command. We have a list for mc-related labels, and one for structures.

```
112 \clist_const:Nn \c__tag_refmc_clist     {tagabspage,tagmcabs,tagmcid}
113 \clist_const:Nn \c__tag_refstruct_clist {tagstruct,tagstructobj}
```

(*End of definition for* \c__tag_refmc_clist *and* \c__tag_refstruct_clist.)

This integer hold the log-level and so allows to control the messages. TODO: a list which log-level shows what is needed. The current behaviour is quite ad-hoc.

```
114 \int_new:N  \l__tag_loglevel_int
```

(*End of definition for* \l__tag_loglevel_int.)

These booleans should help to control the global behaviour of tagpdf. Ideally it should more or less do nothing if all are false. The space-boolean controles the interword space code, the mc-boolean activates \tag_mc_begin:n, the tree-boolean activates writing the finish code and the pdfmanagement related commands, the struct-boolean activates the storing of the structure data. In a normal document all should be active, the split is only there for debugging purpose. Structure destination will be activated automatically if pdf version 2.0 is detected, but with the boolean struct-dest-boolean one can suppress them. Also we assume currently that they are set only at begin document. But if some control passing over groups are needed they could be perhaps used in a document too. TODO: check if they are used everywhere as needed and as wanted.

```
115 \bool_new:N \g__tag_active_space_bool
116 \bool_new:N \g__tag_active_mc_bool
117 \bool_new:N \g__tag_active_tree_bool
118 \bool_new:N \g__tag_active_struct_bool
119 \bool_new:N \g__tag_active_struct_dest_bool
120 \bool_gset_true:N \g__tag_active_struct_dest_bool
```

(*End of definition for* \g__tag_active_space_bool *and others.*)

These booleans should help to control the *local* behaviour of tagpdf. In some cases it could e.g. be necessary to stop tagging completely. As local booleans they respect groups. TODO: check if they are used everywhere as needed and as wanted.

```
121 \bool_new:N \l__tag_active_mc_bool
122 \bool_set_true:N \l__tag_active_mc_bool
123 \bool_new:N \l__tag_active_struct_bool
124 \bool_set_true:N \l__tag_active_struct_bool
```

(*End of definition for* \l__tag_active_mc_bool *and* \l__tag_active_struct_bool.)

This boolean controls if the code should try to automatically tag parts not in mc-chunk. It is currently only used in luamode. It would be possible to used it in generic mode, but this would create quite a lot empty artifact mc-chunks.

```
125 \bool_new:N \g__tag_tagunmarked_bool
```

(*End of definition for* \g__tag_tagunmarked_bool.)

6   Variants of l3 commands

```
126 \prg_generate_conditional_variant:Nnn \pdf_object_if_exist:n {e}{T,F}
127 \cs_generate_variant:Nn \pdf_object_ref:n {e}
128 \cs_generate_variant:Nn \pdfannot_dict_put:nnn {nnx}
129 \cs_generate_variant:Nn \pdffile_embed_stream:nnn {nxx,oxx}
130 \cs_generate_variant:Nn \prop_gput:Nnn {Nxx,Nen}
131 \cs_generate_variant:Nn \prop_put:Nnn  {Nxx}
132 \cs_generate_variant:Nn \prop_item:Nn {No,Ne}
133 \cs_generate_variant:Nn \ref_label:nn { nv }
134 \cs_generate_variant:Nn \seq_set_split:Nnn{Nne}
135 \cs_generate_variant:Nn \str_set_convert:Nnnn {Nonn, Noon, Nnon }
136 \cs_generate_variant:Nn \clist_map_inline:nn {on}
```

7   Setup label attributes

tagstruct
tagstructobj
tagabspage
tagmcabs
tagmcid

This are attributes used by the label/ref system. With structures we store the structure number `tagstruct` and the object reference `tagstructobj`. The second is needed to be able to reference a structure which hasn't been created yet. The alternative would be to create the object in such cases, but then we would have to check the object existence all the time.

With mc-chunks we store the absolute page number `tagabspage`, the absolute id `tagmcabc`, and the id on the page `tagmcid`.

```
137 \ref_attribute_gset:nnnn { tagstruct } {0} { now }
138   { \int_use:N \c@g__tag_struct_abs_int }
139 \ref_attribute_gset:nnnn { tagstructobj } {} { now }
140   {
141     \pdf_object_if_exist:eT {__tag/struct/\int_use:N \c@g__tag_struct_abs_int}
142       {
143         \pdf_object_ref:e{__tag/struct/\int_use:N \c@g__tag_struct_abs_int}
144       }
145   }
146 \ref_attribute_gset:nnnn { tagabspage } {0} { shipout }
147   { \int_use:N \g_shipout_readonly_int }
148 \ref_attribute_gset:nnnn { tagmcabs } {0} { now }
149   { \int_use:N \c@g__tag_MCID_abs_int }
150 \ref_attribute_gset:nnnn {tagmcid }  {0} { now }
151   { \int_use:N \g__tag_MCID_tmp_bypage_int }
```

(*End of definition for* `tagstruct` *and others. These functions are documented on page 6.*)

8   Label commands

__tag_ref_label:nn   A version of \ref_label:nn to set a label which takes a keyword `mc` or `struct` to call the relevant lists. TODO: check if \@bsphack and \@esphack make sense here.

```
152 \cs_new_protected:Npn \__tag_ref_label:nn #1 #2 %#1 label, #2 name of list mc or struct
153   {
154     \@bsphack
155     \ref_label:nv {#1}{c__tag_ref#2_clist}
156     \@esphack
157   }
158 \cs_generate_variant:Nn \__tag_ref_label:nn {en}
```

11

(*End of definition for* `\__tag_ref_label:nn`.)

`\__tag_ref_value:nnn` A local version to retrieve the value. It is a direct wrapper, but to keep naming consistent
.... It uses the variant defined temporarily above.

```
159 \cs_new:Npn \__tag_ref_value:nnn #1 #2 #3 %#1 label, #2 attribute, #3 default
160   {
161     \ref_value:nnn {#1}{#2}{#3}
162   }
163 \cs_generate_variant:Nn \__tag_ref_value:nnn {enn}
```

(*End of definition for* `\__tag_ref_value:nnn`.)

`\__tag_ref_value_lastpage:nn` A command to retrieve the lastpage label, this will be adapted when there is a proper,
kernel lastpage label.

```
164 \cs_new:Npn \__tag_ref_value_lastpage:nn #1 #2
165   {
166     \ref_value:nnn {__tag_LastPage}{#1}{#2}
167   }
```

(*End of definition for* `\__tag_ref_value_lastpage:nn`.)

9 Commands to fill seq and prop

With most engines these are simply copies of the expl3 commands, but luatex will over-
write them, to store the data also in lua tables.

`\__tag_prop_new:N`
`\__tag_seq_new:N`
`\__tag_prop_gput:Nnn`
`\__tag_seq_gput_right:Nn`
`\__tag_seq_item:cn`
`\__tag_prop_item:cn`
`\__tag_seq_show:N`
`\__tag_prop_show:N`

```
168 \cs_set_eq:NN \__tag_prop_new:N          \prop_new:N
169 \cs_set_eq:NN \__tag_seq_new:N           \seq_new:N
170 \cs_set_eq:NN \__tag_prop_gput:Nnn       \prop_gput:Nnn
171 \cs_set_eq:NN \__tag_seq_gput_right:Nn   \seq_gput_right:Nn
172 \cs_set_eq:NN \__tag_seq_item:cn         \seq_item:cn
173 \cs_set_eq:NN \__tag_prop_item:cn        \prop_item:cn
174 \cs_set_eq:NN \__tag_seq_show:N          \seq_show:N
175 \cs_set_eq:NN \__tag_prop_show:N         \prop_show:N
176
177 \cs_generate_variant:Nn \__tag_prop_gput:Nnn      { Nxn , Nxx, Nnx , cnn, cxn, cnx, cno}
178 \cs_generate_variant:Nn \__tag_seq_gput_right:Nn { Nx  , No, cn, cx }
179 \cs_generate_variant:Nn \__tag_prop_new:N    { c }
180 \cs_generate_variant:Nn \__tag_seq_new:N     { c }
181 \cs_generate_variant:Nn \__tag_seq_show:N    { c }
182 \cs_generate_variant:Nn \__tag_prop_show:N   { c }
```

(*End of definition for* `\__tag_prop_new:N` *and others.*)

10 General tagging commands

`\tag_stop_group_begin:`
`\tag_stop_group_end:`
`\tag_stop:`
`\tag_start:`
`\tag_stop:n`
`\tag_start:n`

We need commands to stop tagging in some places. This simply switches the two local
booleans. In some cases tagging should only restart, if it actually was stopped before.
For this it is possible to label a stop.

```
183 \cs_new_protected:Npn \tag_stop_group_begin:
184   {
```

```
185      \group_begin:
186      \bool_set_false:N \l__tag_active_struct_bool
187      \bool_set_false:N \l__tag_active_mc_bool
188    }
189  \cs_set_eq:NN \tag_stop_group_end: \group_end:
190  \cs_set_protected:Npn \tag_stop:
191    {
192      \bool_set_false:N \l__tag_active_struct_bool
193      \bool_set_false:N \l__tag_active_mc_bool
194    }
195  \cs_set_protected:Npn \tag_start:
196    {
197      \bool_set_true:N \l__tag_active_struct_bool
198      \bool_set_true:N \l__tag_active_mc_bool
199    }
200  \cs_set_eq:NN\tagstop\tag_stop:
201  \cs_set_eq:NN\tagstart\tag_start:
202  \prop_new:N\g__tag_state_prop
203  \cs_set_protected:Npn \tag_stop:n #1
204    {
205      \tag_if_active:TF
206        {
207          \bool_set_false:N \l__tag_active_struct_bool
208          \bool_set_false:N \l__tag_active_mc_bool
209          \prop_gput:Nnn \g__tag_state_prop { #1 }{ 1 }
210        }
211        {
212          \prop_gremove:Nn \g__tag_state_prop { #1 }
213        }
214    }
215  \cs_set_protected:Npn \tag_start:n #1
216    {
217      \prop_gpop:NnN \g__tag_state_prop {#1}\l__tag_tmpa_tl
218      \quark_if_no_value:NF \l__tag_tmpa_tl
219        {
220          \bool_set_true:N \l__tag_active_struct_bool
221          \bool_set_true:N \l__tag_active_mc_bool
222        }
223    }
224  ⟨/package⟩
225  ⟨∗base⟩
226  \cs_new_protected:Npn \tag_stop:{}
227  \cs_new_protected:Npn \tag_start:{}
228  \cs_new_protected:Npn \tagstop{}
229  \cs_new_protected:Npn \tagstart{}
230  \cs_new_protected:Npn \tag_stop:n  #1 {}
231  \cs_new_protected:Npn \tag_start:n #1 {}
232  ⟨/base⟩
```

(*End of definition for* \tag_stop_group_begin: *and others. These functions are documented on page 6.*)

11   Keys for tagpdfsetup

TODO: the log-levels must be sorted

<div style="float:left">

activate-space␣(setup-key)
activate-mc␣(setup-key)
activate-tree␣(setup-key)
activate-struct␣(setup-key)
activate-all␣(setup-key)
no-struct-dest␣(setup-key)

</div>

Keys to (globally) activate tagging. `activate-space` activates the additional parsing needed for interword spaces. It is not documented, the parsing is currently implicitly activated by the known key `interwordspace`, as the code will perhaps move to some other place, now that it is better separated. `no-struct-dest` allows to suppress structure destinations.

```
233 ⟨*package⟩
234 \keys_define:nn { __tag / setup }
235   {
236     activate-space  .bool_gset:N = \g__tag_active_space_bool,
237     activate-mc     .bool_gset:N = \g__tag_active_mc_bool,
238     activate-tree   .bool_gset:N = \g__tag_active_tree_bool,
239     activate-struct .bool_gset:N = \g__tag_active_struct_bool,
240     activate-all    .meta:n =
241       {activate-mc={#1},activate-tree={#1},activate-struct={#1}},
242     activate-all  .default:n = true,
243     no-struct-dest .bool_gset_inverse:N = \g__tag_active_struct_dest_bool,
244
```

(*End of definition for* `activate-space (setup-key)` *and others. These functions are documented on page 6.*)

log␣(setup-key)

The `log` takes currently the values `none`, `v`, `vv`, `vvv`, `all`. The description of the log levels is in tagpdf-checks.

```
245     log             .choice:,
246     log / none      .code:n = {\int_set:Nn \l__tag_loglevel_int { 0 }},
247     log / v         .code:n =
248       {
249         \int_set:Nn \l__tag_loglevel_int { 1 }
250         \cs_set_protected:Nn \__tag_check_typeout_v:n { \iow_term:x {##1} }
251       },
252     log / vv        .code:n = {\int_set:Nn \l__tag_loglevel_int { 2 }},
253     log / vvv       .code:n = {\int_set:Nn \l__tag_loglevel_int { 3 }},
254     log / all       .code:n = {\int_set:Nn \l__tag_loglevel_int { 10 }},
```

(*End of definition for* `log (setup-key)`. *This function is documented on page 6.*)

tagunmarked␣(setup-key)

This key allows to set if (in luamode) unmarked text should be marked up as artifact. The initial value is true.

```
255     tagunmarked     .bool_gset:N = \g__tag_tagunmarked_bool,
256     tagunmarked     .initial:n = true,
```

(*End of definition for* `tagunmarked (setup-key)`. *This function is documented on page 6.*)

tabsorder␣(setup-key)

This sets the tabsorder on a page. The values are `row`, `column`, `structure` (default) or `none`. Currently this is set more or less globally. More finer control can be added if needed.

```
257     tabsorder       .choice:,
258     tabsorder / row       .code:n =
259       \pdfmanagement_add:nnn { Page } {Tabs}{/R},
260     tabsorder / column    .code:n =
```

14

```
261      \pdfmanagement_add:nnn { Page } {Tabs}{/C},
262    tabsorder / structure .code:n =
263      \pdfmanagement_add:nnn { Page } {Tabs}{/S},
264    tabsorder / none      .code:n =
265      \pdfmanagement_remove:nn {Page} {Tabs},
266    tabsorder      .initial:n = structure,
267    uncompress      .code:n = { \pdf_uncompress:  },
268  }
```

(*End of definition for* `tabsorder` *(setup-key). This function is documented on page* *6*.)

12   loading of engine/more dependent code

```
269 \sys_if_engine_luatex:T
270   {
271     \file_input:n {tagpdf-luatex.def}
272   }
273 ⟨/package⟩
274 ⟨*mcloading⟩
275 \bool_if:NTF \g__tag_mode_lua_bool
276   {
277    \RequirePackage {tagpdf-mc-code-lua}
278   }
279   {
280    \RequirePackage {tagpdf-mc-code-generic} %
281   }
282 ⟨/mcloading⟩
283 ⟨*debug⟩
284 \bool_if:NTF \g__tag_mode_lua_bool
285   {
286    \RequirePackage {tagpdf-debug-lua}
287   }
288   {
289    \RequirePackage {tagpdf-debug-generic} %
290   }
291 ⟨/debug⟩
```

15

Part I
The **tagpdf-checks** module Messages and check code Part of the tagpdf package

1 Commands

`\tag_if_active_p:` ⋆
`\tag_if_active:`*TF* ⋆

This command tests if tagging is active. It only gives true if all tagging has been activated, *and* if tagging hasn't been stopped locally.

`\tag_get:n` ⋆

`\tag_get:n{⟨keyword⟩}`

This is a generic command to retrieve data for the current structure or mc-chunk. Currently the only sensible values for the argument ⟨*keyword*⟩ are `mc_tag`, `struct_tag`, `struct_id` and `struct_num`.

`\tag_if_box_tagged_p:N` ⋆
`\tag_if_box_tagged:N`*TF* ⋆

`\tag_if_box_tagged:N{⟨box⟩}`

This tests if a box contains tagging commands. It relies currently on that the code that saved the box correctly set the command `\l_tag_box_\int_use:N #1_tl` to a positive value. The LaTeX commands will do that automatically at some time but it is in the responsability of the user to ensure that when using low-level code. If the internal command doesn't exist the box is assumed to be untagged.

2 Description of log messages

2.1 \ShowTagging command

Argument	type	note
\ShowTaggingmc-data = num	log+term	lua-only
\ShowTaggingmc-current	log+term	
\ShowTaggingstruck-stack= [log|show]	log or term+stop	

16

2.2 Messages in checks and commands

command	message	action
\@@_check_structure_has_tag:n	struct-missing-tag	error
\@@_check_structure_tag:N	role-unknown-tag	warning
\@@_check_info_closing_struct:n	struct-show-closing	info
\@@_check_no_open_struct:	struct-faulty-nesting	error

in enddocument/info-hook	para-hook-count-wrong	error (warning?)

2.3 Messages from the ptagging code

A few messages are issued in generic mode from the code which reinserts missing TMB/TME. This is currently done if log-level is larger than zero. TODO: reconsider log-level and messages when this code settles down.

2.4 Warning messages from the lua-code

The messages are triggered if the log-level is at least equal to the number.

message	log-level	remark
WARN TAG-NOT-TAGGED:	1	
WARN TAG-OPEN-MC:	1	
WARN SHIPOUT-MC-OPEN:	1	
WARN SHIPOUT-UPS:	0	shouldn't happen
WARN TEX-MC-INSERT-MISSING:	0	shouldn't happen
WARN TEX-MC-INSERT-NO-KIDS:	2	e.g. from empty hbox

2.5 Info messages from the lua-code

The messages are triggered if the log-level is at least equal to the number. `TAG` messages are from the traversing function, `TEX` from code used in the tagpdf-mc module. `PARENTREE` is the code building the parenttree.

message	log-level	remark
INFO SHIPOUT-INSERT-LAST-EMC	3	finish of shipout code
INFO SPACE-FUNCTION-FONT	3	interwordspace code
INFO TAG-ABSPAGE	3	
INFO TAG-ARGS	4

`INFO PARENTTREE-STRUCT-OBJREF`	4	

2.6 Debug mode messages and code

If the package tagpdf-debug is loaded a number of commands are redefined and en-
hanced with additional commands which can be used to output debug messages or
collect statistics. The commands are present but do nothing if the log-level is zero.

command	name	action	remark
`\tag_mc_begin:n`	mc-begin-insert	msg	
	mc-begin-ignore	msg	if inactive

2.7 Messages

`mc-nested`
`mc-tag-missing`
`mc-label-unknown`
`mc-used-twice`
`mc-not-open`
`mc-pushed`
`mc-popped`
`mc-current`
	Various messages related to mc-chunks. TODO document their meaning.

`struct-no-objnum`
`struct-faulty-nesting`
`struct-missing-tag`
`struct-used-twice`
`struct-label-unknown`
`struct-show-closing`
	Various messages related to structure. TODO document their meaning.

`attr-unknown`	Message if an attribute i sunknown.

`role-missing`
`role-unknown`
`role-unknown-tag`
`role-tag`
`new-tag`
	Messages related to role mapping.

`tree-mcid-index-wrong`	Used in the tree code, typically indicates the document must be rerun.

`sys-no-interwordspace`	Message if an engine doesn't support inter word spaces

`para-hook-count-wrong`	Message if the number of begin paragraph and end paragraph differ. This normally means faulty structure.

3 Messages

3.1 Messages related to mc-chunks

mc-nested This message is issue is a mc is opened before the previous has been closed. This is not relevant for luamode, as the attributes don't care about this. It is used in the `\@@_check_mc_if_nested:` test.

```
6 ⟨*package⟩
7 \msg_new:nnn { tag } {mc-nested} { nested~marked~content~found~-~mcid~#1 }
```

(*End of definition for* `mc-nested`*. This function is documented on page 18.*)

mc-tag-missing If the tag is missing

```
8 \msg_new:nnn { tag } {mc-tag-missing} { required~tag~missing~-~mcid~#1 }
```

(*End of definition for* `mc-tag-missing`*. This function is documented on page 18.*)

mc-label-unknown If the label of a mc that is used in another place is not known (yet) or has been undefined as the mc was already used.

```
9 \msg_new:nnn { tag } {mc-label-unknown}
10   { label~#1~unknown~or~has~been~already~used.\\
11     Either~rerun~or~remove~one~of~the~uses. }
```

(*End of definition for* `mc-label-unknown`*. This function is documented on page 18.*)

mc-used-twice An mc-chunk can be inserted only in one structure. This indicates wrong coding and so should at least give a warning.

```
12 \msg_new:nnn { tag } {mc-used-twice} { mc~#1~has~been~already~used }
```

(*End of definition for* `mc-used-twice`*. This function is documented on page 18.*)

mc-not-open This is issued if a \tag_mc_end: is issued wrongly, wrong coding.

```
13 \msg_new:nnn { tag } {mc-not-open} { there~is~no~mc~to~end~at~#1 }
```

(*End of definition for* `mc-not-open`*. This function is documented on page 18.*)

mc-pushed
mc-popped Informational messages about mc-pushing.

```
14 \msg_new:nnn { tag } {mc-pushed} { #1~has~been~pushed~to~the~mc~stack}
15 \msg_new:nnn { tag } {mc-popped} { #1~has~been~removed~from~the~mc~stack }
```

(*End of definition for* `mc-pushed` *and* `mc-popped`*. These functions are documented on page 18.*)

mc-current Informational messages about current mc state.

```
16 \msg_new:nnn { tag } {mc-current}
17   { current~MC:~
18     \bool_if:NTF\g__tag_in_mc_bool
19       {abscnt=\__tag_get_mc_abs_cnt:,~tag=\g__tag_mc_key_tag_tl}
20       {no~MC~open,~current~abscnt=\__tag_get_mc_abs_cnt:"}
21   }
```

(*End of definition for* `mc-current`*. This function is documented on page 18.*)

3.2 Messages related to structures

struct-unknown if for example a parent key value points to structure that doesn't exist (yet)

```
22 \msg_new:nnn { tag } {struct-unknown}
23   { structure~with~number~#1~doesn't~exist\\ #2 }
```

(*End of definition for* `struct-unknown`*. This function is documented on page* **??**.*)

struct-no-objnum Should not happen . . .

```
24 \msg_new:nnn { tag } {struct-no-objnum} { objnum~missing~for~structure~#1 }
```

(*End of definition for* `struct-no-objnum`*. This function is documented on page 19.*)

struct-orphan This indicates that there is a structure which has kids but no parent. This can happen if a structure is stashed but then not used.

```
25 \msg_new:nnn { tag } {struct-orphan}
26   {
27     Structure~#1~has~#2~kids~but~no~parent.\\
28     It~is~turned~into~an~artifact.\\
29     Did~you~stashed~a~structure~and~then~didn't~use~it?
30   }
31
```

(*End of definition for* `struct-orphan`*. This function is documented on page* **??**.)

struct-faulty-nesting   This indicates that there is somewhere one `\tag_struct_end:` too much. This should be normally an error.

```
32 \msg_new:nnn { tag }
33    {struct-faulty-nesting}
34    { there~is~no~open~structure~on~the~stack }
```

(*End of definition for* `struct-faulty-nesting`*. This function is documented on page* *19*.)

struct-missing-tag   A structure must have a tag.

```
35 \msg_new:nnn { tag } {struct-missing-tag} { a~structure~must~have~a~tag! }
```

(*End of definition for* `struct-missing-tag`*. This function is documented on page* *19*.)

struct-used-twice

```
36 \msg_new:nnn { tag } {struct-used-twice}
37    { structure~with~label~#1~has~already~been~used}
```

(*End of definition for* `struct-used-twice`*. This function is documented on page* *19*.)

struct-label-unknown   label is unknown, typically needs a rerun.

```
38 \msg_new:nnn { tag } {struct-label-unknown}
39    { structure~with~label~#1~is~unknown~rerun}
```

(*End of definition for* `struct-label-unknown`*. This function is documented on page* *19*.)

struct-show-closing   Informational message shown if log-mode is high enough

```
40 \msg_new:nnn { tag } {struct-show-closing}
41    { closing~structure~#1~tagged~\use:e{\prop_item:cn{g__tag_struct_#1_prop}{S}} }
```

(*End of definition for* `struct-show-closing`*. This function is documented on page* *19*.)

tree-struct-still-open   Message issued at the end if there are beside Root other open structures on the stack.

```
42 \msg_new:nnn { tag } {tree-struct-still-open}
43    {
44      There~are~still~open~structures~on~the~stack!\\
45      The~stack~contains~\seq_use:Nn\g__tag_struct_tag_stack_seq{,}.\\
46      The~structures~are~automatically~closed,\\
47      but~their~nesting~can~be~wrong.
48    }
```

(*End of definition for* `tree-struct-still-open`*. This function is documented on page* **??**.)

3.3   Attributes

Not much yet, as attributes aren't used so much.

attr-unknown

```
49 \msg_new:nnn { tag } {attr-unknown}  { attribute~#1~is~unknown}
```

(*End of definition for* `attr-unknown`*. This function is documented on page* *19*.)

3.4 Roles

role-missing
role-unknown
role-unknown-tag

Warning message if either the tag or the role is missing

```
50 \msg_new:nnn { tag } {role-missing}     { tag~#1~has~no~role~assigned  }
51 \msg_new:nnn { tag } {role-unknown}     { role~#1~is~not~known  }
52 \msg_new:nnn { tag } {role-unknown-tag} { tag~#1~is~not~known  }
```

(*End of definition for* `role-missing` *,* `role-unknown` *, and* `role-unknown-tag`*. These functions are documented on page 19.*)

role-parent-child

This is info and warning message about the containment rules between child and parent tags.

```
53 \msg_new:nnn { tag } {role-parent-child}
54   { Parent-Child~'#1'~-->~'#2'.\\Relation~is~#3~\msg_line_context:}
```

(*End of definition for* `role-parent-child`*. This function is documented on page* **??**.*)

role-remapping

This is info and warning message about role-remapping

```
55 \msg_new:nnn { tag } {role-remapping}
56   { remapping~tag~to~#1 }
```

(*End of definition for* `role-remapping`*. This function is documented on page* **??**.*)

role-tag
new-tag

Info messages.

```
57 \msg_new:nnn { tag } {role-tag}        { mapping~tag~#1~to~role~#2  }
58 \msg_new:nnn { tag } {new-tag}         { adding~new~tag~#1 }
59 \msg_new:nnn { tag } {read-namespace}  { reading~namespace~definitions~tagpdf-ns-
   #1.def }
60 \msg_new:nnn { tag } {namespace-missing}{ namespace~definitions~tagpdf-ns-#1.def~not~found }
61 \msg_new:nnn { tag } {namespace-unknown}{ namespace~#1~is~not~declared }
```

(*End of definition for* `role-tag` *and* `new-tag`*. These functions are documented on page 19.*)

3.5 Miscellaneous

tree-mcid-index-wrong

Used in the tree code, typically indicates the document must be rerun.

```
62 \msg_new:nnn { tag } {tree-mcid-index-wrong}
63   {something~is~wrong~with~the~mcid--rerun}
```

(*End of definition for* `tree-mcid-index-wrong`*. This function is documented on page 19.*)

sys-no-interwordspace

Currently only pdflatex and lualatex have some support for real spaces.

```
64 \msg_new:nnn { tag } {sys-no-interwordspace}
65   {engine/output~mode~#1~doesn't~support~the~interword~spaces}
```

(*End of definition for* `sys-no-interwordspace`*. This function is documented on page 19.*)

__tag_check_typeout_v:n

A simple logging function. By default is gobbles its argument, but the log-keys sets it to typeout.

```
66 \cs_set_eq:NN \__tag_check_typeout_v:n \use_none:n
```

(*End of definition for* `\__tag_check_typeout_v:n`*.*)

para-hook-count-wrong At the end of the document we check if the count of para-begin and para-end is identical. If not we issue a warning: this is normally a coding error and and breaks the structure.

```
67 \msg_new:nnnn { tag } {para-hook-count-wrong}
68    {The~number~of~automatic~begin~(#1)~and~end~(#2)~#3~para~hooks~differ!}
69    {This~quite~probably~a~coding~error~and~the~structure~will~be~wrong!}
70 ⟨/package⟩
```

(*End of definition for* `para-hook-count-wrong`. *This function is documented on page 19*.)

4   Retrieving data

\tag_get:n This retrieves some data. This is a generic command to retrieve data. Currently the only sensible values for the argument are `mc_tag`, `struct_tag` and `struct_num`.

```
71 ⟨base⟩\cs_new:Npn \tag_get:n #1    { \use:c {__tag_get_data_#1: } }
```

(*End of definition for* `\tag_get:n`. *This function is documented on page 16*.)

5   User conditionals

\tag_if_active_p:
\tag_if_active:*TF* This tests if tagging is active. This allows packages to add conditional code. The test is true if all booleans, the global and the two local one are true.

```
72 ⟨*base⟩
73 \prg_new_conditional:Npnn \tag_if_active: { p , T , TF, F }
74   { \prg_return_false: }
75 ⟨/base⟩
76 ⟨*package⟩
77 \prg_set_conditional:Npnn \tag_if_active: { p , T , TF, F }
78   {
79     \bool_lazy_all:nTF
80       {
81         {\g__tag_active_struct_bool}
82         {\g__tag_active_mc_bool}
83         {\g__tag_active_tree_bool}
84         {\l__tag_active_struct_bool}
85         {\l__tag_active_mc_bool}
86       }
87       {
88         \prg_return_true:
89       }
90       {
91         \prg_return_false:
92       }
93   }
94 ⟨/package⟩
```

(*End of definition for* `\tag_if_active:TF`. *This function is documented on page 16*.)

\tag_if_box_tagged_p:N
\tag_if_box_tagged:N*TF* This tests if a box contains tagging commands. It relies on that the code that saved the box correctly set `\l_tag_box_<box number>_tl` to a positive value. The LaTeX commands will do that automatically at some time but it is in the responsability of the user to ensure that when using low-level code. If the internal command doesn't exist the box is assumed to be untagged.

23

```
95 ⟨*base⟩
96 \prg_new_conditional:Npnn \tag_if_box_tagged:N #1 {p,T,F,TF}
97     {
98       \tl_if_exist:cTF {l_tag_box_\int_use:N #1_tl}
99        {
100         \int_compare:nNnTF {0\tl_use:c{l_tag_box_\int_use:N #1_tl}}>{0}
101          { \prg_return_true:   }
102          { \prg_return_false: }
103       }
104       {
105         \prg_return_false:
106         % warning??
107       }
108     }
109 ⟨/base⟩
```

6 Internal checks

These are checks used in various places in the code.

6.1 checks for active tagging

`\__tag_check_if_active_mc:TF` This checks if mc are active.

`\__tag_check_if_active_struct:TF`

```
110 ⟨*package⟩
111 \prg_new_conditional:Npnn \__tag_check_if_active_mc: {T,F,TF}
112   {
113     \bool_lazy_and:nnTF { \g__tag_active_mc_bool } { \l__tag_active_mc_bool }
114       {
115         \prg_return_true:
116       }
117       {
118         \prg_return_false:
119       }
120   }
121 \prg_new_conditional:Npnn \__tag_check_if_active_struct: {T,F,TF}
122   {
123     \bool_lazy_and:nnTF { \g__tag_active_struct_bool } { \l__tag_active_struct_bool }
124       {
125         \prg_return_true:
126       }
127       {
128         \prg_return_false:
129       }
130   }
```

(*End of definition for* `\__tag_check_if_active_mc:TF` *and* `\__tag_check_if_active_struct:TF`.)

6.2 Checks related to structures

__tag_check_structure_has_tag:n

Structures must have a tag, so we check if the S entry is in the property. It is an error if this is missing. The argument is a number. The tests for existence and type is split in structures, as the tags are stored differently to the mc case.

```
131 \cs_new_protected:Npn \__tag_check_structure_has_tag:n #1 %#1 struct num
132   {
133     \prop_if_in:cnF { g__tag_struct_#1_prop }
134       {S}
135       {
136         \msg_error:nn { tag } {struct-missing-tag}
137       }
138   }
```

(*End of definition for* __tag_check_structure_has_tag:n.)

__tag_check_structure_tag:N

This checks if the name of the tag is known, either because it is a standard type or has been rolemapped.

```
139 \cs_new_protected:Npn \__tag_check_structure_tag:N #1
140   {
141     \prop_if_in:NoF \g__tag_role_tags_NS_prop {#1}
142       {
143         \msg_warning:nnx { tag } {role-unknown-tag} {#1}
144       }
145   }
```

(*End of definition for* __tag_check_structure_tag:N.)

__tag_check_info_closing_struct:n

This info message is issued at a closing structure, the use should be guarded by log-level.

```
146 \cs_new_protected:Npn \__tag_check_info_closing_struct:n #1 %#1 struct num
147   {
148     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
149       {
150         \msg_info:nnn { tag } {struct-show-closing} {#1}
151       }
152   }
153
154 \cs_generate_variant:Nn \__tag_check_info_closing_struct:n {o,x}
```

(*End of definition for* __tag_check_info_closing_struct:n.)

__tag_check_no_open_struct:

This checks if there is an open structure. It should be used when trying to close a structure. It errors if false.

```
155 \cs_new_protected:Npn \__tag_check_no_open_struct:
156   {
157     \msg_error:nn { tag } {struct-faulty-nesting}
158   }
```

(*End of definition for* __tag_check_no_open_struct:.)

__tag_check_struct_used:n

This checks if a stashed structure has already been used.

```
159 \cs_new_protected:Npn \__tag_check_struct_used:n #1 %#1 label
160   {
161     \prop_get:cnNT
162       {g__tag_struct_\__tag_ref_value:enn{tagpdfstruct-#1}{tagstruct}{unknown}_prop}
```

25

```
163        {P}
164        \l__tag_tmpa_tl
165        {
166          \msg_warning:nnn { tag } {struct-used-twice} {#1}
167        }
168    }
```

(*End of definition for* `\__tag_check_struct_used:n`.)

6.3 Checks related to roles

`\__tag_check_add_tag_role:nn` This check is used when defining a new role mapping.

```
169 \cs_new_protected:Npn \__tag_check_add_tag_role:nn #1 #2 %#1 tag, #2 role
170    {
171      \tl_if_empty:nTF {#2}
172        {
173          \msg_error:nnn { tag } {role-missing} {#1}
174        }
175        {
176          \prop_get:NnNTF \g__tag_role_tags_NS_prop {#2} \l_tmpa_tl
177            {
178              \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
179                {
180                  \msg_info:nnnn { tag } {role-tag} {#1} {#2}
181                }
182            }
183            {
184              \msg_error:nnn { tag } {role-unknown} {#2}
185            }
186        }
187    }
```

Similar with a namespace

```
188 \cs_new_protected:Npn \__tag_check_add_tag_role:nnn #1 #2 #3 %#1 tag/NS, #2 role #3 namespace
189    {
190      \tl_if_empty:nTF {#2}
191        {
192          \msg_error:nnn { tag } {role-missing} {#1}
193        }
194        {
195          \prop_get:cnNTF { g__tag_role_NS_#3_prop } {#2} \l_tmpa_tl
196            {
197              \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
198                {
199                  \msg_info:nnnn { tag } {role-tag} {#1} {#2/#3}
200                }
201            }
202            {
203              \msg_error:nnn { tag } {role-unknown} {#2/#3}
204            }
205        }
206    }
```

(*End of definition for* `\__tag_check_add_tag_role:nn`.)

6.4 Check related to mc-chunks

__tag_check_mc_if_nested:
__tag_check_mc_if_open:

Two tests if a mc is currently open. One for the true (for begin code), one for the false part (for end code).

```
207 \cs_new_protected:Npn \__tag_check_mc_if_nested:
208   {
209     \__tag_mc_if_in:T
210       {
211         \msg_warning:nnx { tag } {mc-nested} { \__tag_get_mc_abs_cnt: }
212       }
213   }
214
215 \cs_new_protected:Npn \__tag_check_mc_if_open:
216   {
217     \__tag_mc_if_in:F
218       {
219         \msg_warning:nnx { tag } {mc-not-open} { \__tag_get_mc_abs_cnt: }
220       }
221   }
```

(*End of definition for* __tag_check_mc_if_nested: *and* __tag_check_mc_if_open:.)

__tag_check_mc_pushed_popped:nn

This creates an information message if mc's are pushed or popped. The first argument is a word (pushed or popped), the second the tag name. With larger log-level the stack is shown too.

```
222 \cs_new_protected:Npn \__tag_check_mc_pushed_popped:nn #1 #2
223   {
224     \int_compare:nNnT
225       { \l__tag_loglevel_int } =( 2 }
226       { \msg_info:nnx {tag}{mc-#1}{#2} }
227     \int_compare:nNnT
228       { \l__tag_loglevel_int } > { 2 }
229       {
230         \msg_info:nnx {tag}{mc-#1}{#2}
231         \seq_log:N \g__tag_mc_stack_seq
232       }
233   }
```

(*End of definition for* __tag_check_mc_pushed_popped:nn.)

__tag_check_mc_tag:N

This checks if the mc has a (known) tag.

```
234 \cs_new_protected:Npn \__tag_check_mc_tag:N #1  %#1 is var with a tag name in it
235   {
236     \tl_if_empty:NT #1
237       {
238         \msg_error:nnx { tag } {mc-tag-missing} { \__tag_get_mc_abs_cnt: }
239       }
240     \prop_if_in:NoF \g__tag_role_tags_NS_prop {#1}
241       {
242         \msg_warning:nnx { tag } {role-unknown-tag} {#1}
243       }
244   }
```

(*End of definition for* __tag_check_mc_tag:N.)

$\g__tag_check_mc_used_intarray$
$\__tag_check_init_mc_used:$

This variable holds the list of used mc numbers. Everytime we store a mc-number we will add one the relevant array index If everything is right at the end there should be only 1 until the max count of the mcid. 2 indicates that one mcid was used twice, 0 that we lost one. In engines other than luatex the total number of all intarray entries are restricted so we use only a rather small value of 65536, and we initialize the array only at first used, guarded by the log-level. This check is probably only needed for debugging. TODO does this really make sense to check? When can it happen??

```
245 \cs_new_protected:Npn \__tag_check_init_mc_used:
246   {
247     \intarray_new:Nn \g__tag_check_mc_used_intarray { 65536 }
248     \cs_gset_eq:NN \__tag_check_init_mc_used: \prg_do_nothing:
249   }
```

(*End of definition for* $\g__tag_check_mc_used_intarray$ *and* $\__tag_check_init_mc_used:$.)

$\__tag_check_mc_used:n$ This checks if a mc is used twice.

```
250 \cs_new_protected:Npn \__tag_check_mc_used:n #1 %#1 mcid abscnt
251   {
252     \int_compare:nNnT {\l__tag_loglevel_int} > { 2 }
253       {
254         \__tag_check_init_mc_used:
255         \intarray_gset:Nnn \g__tag_check_mc_used_intarray
256           {#1}
257           { \intarray_item:Nn \g__tag_check_mc_used_intarray {#1} + 1 }
258         \int_compare:nNnT
259           {
260             \intarray_item:Nn \g__tag_check_mc_used_intarray {#1}
261           }
262           >
263           { 1 }
264           {
265             \msg_warning:nnn { tag } {mc-used-twice} {#1}
266           }
267       }
268   }
```

(*End of definition for* $\__tag_check_mc_used:n$.)

$\__tag_check_show_MCID_by_page:$ This allows to show the mc on a page. Currently unused.

```
269 \cs_new_protected:Npn \__tag_check_show_MCID_by_page:
270   {
271     \tl_set:Nx \l__tag_tmpa_tl
272       {
273         \__tag_ref_value_lastpage:nn
274           {abspage}
275           {-1}
276       }
277     \int_step_inline:nnnn {1}{1}
278       {
279         \l__tag_tmpa_tl
280       }
281       {
282         \seq_clear:N \l_tmpa_seq
283         \int_step_inline:nnnn
```

28

```
284              {1}
285              {1}
286              {
287                \__tag_ref_value_lastpage:nn
288                  {tagmcabs}
289                  {-1}
290              }
291              {
292                \int_compare:nT
293                  {
294                    \__tag_ref_value:enn
295                      {mcid-####1}
296                      {tagabspage}
297                      {-1}
298                    =
299                    ##1
300                  }
301                  {
302                    \seq_gput_right:Nx \l_tmpa_seq
303                      {
304                        Page##1-####1-
305                        \__tag_ref_value:enn
306                          {mcid-####1}
307                          {tagmcid}
308                          {-1}
309                      }
310                  }
311              }
312            \seq_show:N \l_tmpa_seq
313        }
314    }
```

(*End of definition for* `\__tag_check_show_MCID_by_page:`.)

6.5 Checks related to the state of MC on a page or in a split stream

The following checks are currently only usable in generic mode as they rely on the marks defined in the mc-generic module. They are used to detect if a mc-chunk has been split by a page break or similar and additional end/begin commands are needed.

`\__tag_check_mc_in_galley_p:`
`\__tag_check_mc_in_galley:`*TF*

At first we need a test to decide if `\tag_mc_begin:n` (tmb) and `\tag_mc_end:` (tme) has been used at all on the current galley. As each command issues two slightly different marks we can do it by comparing firstmarks and botmarks. The test assumes that the marks have been already mapped into the sequence with `\@@_mc_get_marks:`. As `\seq_if_eq:NNTF` doesn't exist we use the tl-test.

```
315 \prg_new_conditional:Npnn \__tag_check_if_mc_in_galley: { T,F,TF }
316  {
317    \tl_if_eq:NNTF \l__tag_mc_firstmarks_seq \l__tag_mc_botmarks_seq
318      { \prg_return_false: }
319      { \prg_return_true: }
320  }
```

(*End of definition for* `\__tag_check_mc_in_galley:TF`.)

This checks if a extra top mark ("extra-tmb") is needed. According to the analysis this the case if the firstmarks start with e- or b+. Like above we assume that the marks content is already in the seq's.

```
321 \prg_new_conditional:Npnn \__tag_check_if_mc_tmb_missing: { T,F,TF }
322   {
323     \bool_if:nTF
324       {
325         \str_if_eq_p:ee {\seq_item:Nn \l__tag_mc_firstmarks_seq {1}}{e-}
326         ||
327         \str_if_eq_p:ee {\seq_item:Nn \l__tag_mc_firstmarks_seq {1}}{b+}
328       }
329       { \prg_return_true: }
330       { \prg_return_false: }
331   }
```

(*End of definition for* _tag_check_if_mc_tmb_missing:*TF*.)

This checks if a extra bottom mark ("extra-tme") is needed. According to the analysis this the case if the botmarks starts with b+. Like above we assume that the marks content is already in the seq's.

```
332 \prg_new_conditional:Npnn \__tag_check_if_mc_tme_missing: { T,F,TF }
333   {
334     \str_if_eq:eeTF {\seq_item:Nn \l__tag_mc_botmarks_seq {1}}{b+}
335       { \prg_return_true: }
336       { \prg_return_false: }
337   }
```

(*End of definition for* _tag_check_if_mc_tme_missing:*TF*.)

```
338 ⟨/package⟩
```

```
339 ⟨∗debug⟩
```

Code for tagpdf-debug. This will probably change over time. At first something for the mc commands.

```
340 \msg_new:nnn { tag / debug } {mc-begin} { MC~begin~#1~with~options:~\tl_to_str:n{#2}~[\msg_lin
341 \msg_new:nnn { tag / debug } {mc-end}   { MC~end~#1~[\msg_line_context:] }
342
343 \cs_new_protected:Npn \__tag_debug_mc_begin_insert:n #1
344   {
345     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
346       {
347         \msg_note:nnnn { tag / debug } {mc-begin} {inserted} { #1 }
348       }
349   }
350 \cs_new_protected:Npn \__tag_debug_mc_begin_ignore:n #1
351   {
352     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
353       {
354         \msg_note:nnnn { tag / debug } {mc-begin } {ignored} { #1 }
355       }
356   }
357 \cs_new_protected:Npn \__tag_debug_mc_end_insert:
358   {
359     \int_compare:nNnT { \l__tag_loglevel_int } > {0}
```

```
360        {
361            \msg_note:nnn { tag / debug } {mc-end} {inserted}
362        }
363    }
364    \cs_new_protected:Npn \__tag_debug_mc_end_ignore:
365    {
366        \int_compare:nNnT { \l__tag_loglevel_int } > {0}
367        {
368            \msg_note:nnn { tag / debug } {mc-end } {ignored}
369        }
370    }
```

And now something for the structures

```
371    \msg_new:nnn { tag / debug } {struct-begin}
372    {
373        Struct~\tag_get:n{struct_num}~begin~#1~with~options:~\tl_to_str:n{#2}~[\msg_line_context:]
374    }
375    \msg_new:nnn { tag / debug } {struct-end}
376    {
377        Struct~end~#1~[\msg_line_context:]
378    }
379    \msg_new:nnn { tag / debug } {struct-end-wrong}
380    {
381        Struct~end~'#1'~doesn't~fit~start~'#2'~[\msg_line_context:]
382    }
383
384    \cs_new_protected:Npn \__tag_debug_struct_begin_insert:n #1
385    {
386        \int_compare:nNnT { \l__tag_loglevel_int } > {0}
387        {
388            \msg_note:nnnn { tag / debug } {struct-begin} {inserted} { #1 }
389            \seq_log:N \g__tag_struct_tag_stack_seq
390        }
391    }
392    \cs_new_protected:Npn \__tag_debug_struct_begin_ignore:n #1
393    {
394        \int_compare:nNnT { \l__tag_loglevel_int } > {0}
395        {
396            \msg_note:nnnn { tag / debug } {struct-begin } {ignored} { #1 }
397        }
398    }
399    \cs_new_protected:Npn \__tag_debug_struct_end_insert:
400    {
401        \int_compare:nNnT { \l__tag_loglevel_int } > {0}
402        {
403            \msg_note:nnn { tag / debug } {struct-end} {inserted}

429      }
430  }
431
432  ⟨/debug⟩
```

Part II

The **tagpdf-user** module
Code related to LaTeX2e user commands and document commands
Part of the tagpdf package

1 Setup commands

`\tagpdfsetup` `\tagpdfsetup{⟨key val list⟩}`

This is the main setup command to adapt the behaviour of tagpdf. It can be used in the preamble and in the document (but not all keys make sense there).

`activate␣(setup-key)` And additional setup key which combine the other activate keys `activate-mc`, `activate-tree`, `activate-struct` and additionally add a document structure.

`\tag_tool:n` `\tag_tool:n{⟨key val⟩}`
`\tagtool`

The tagging of basic document elements will require a variety of small commands to configure and adapt the tagging. This command will collect them under a command interface. The argument is *one* key-value like string. This is work in progress and both syntax, known arguments and implementation can change!

2 Commands related to mc-chunks

`\tagmcbegin` `\tagmcbegin {⟨key-val⟩}`
`\tagmcend` `\tagmcend`
`\tagmcuse` `\tagmcuse{⟨label⟩}`

These are wrappers around `\tag_mc_begin:n`, `\tag_mc_end:` and `\tag_mc_use:n`. The commands and their argument are documentated in the **tagpdf-mc** module. In difference to the expl3 commands, `\tagmcbegin` issues also an `\ignorespaces`, and `\tagmcend` will issue in horizontal mode an `\unskip`.

`\tagmcifinTF` `\tagmcifin {⟨true code⟩}{⟨false code⟩}`

This is a wrapper around `\tag_mc_if_in:TF`. and tests if an mc is open or not. It is mostly of importance for pdflatex as lualatex doesn't mind much if a mc tag is not correctly closed. Unlike the expl3 command it is not expandable.

The command is probably not of much use and will perhaps disappear in future versions. It normally makes more sense to push/pop an mc-chunk.

3 Commands related to structures

\tagstructbegin \tagstructbegin {⟨*key-val*⟩}
\tagstructend \tagstructend
\tagstructuse \tagstructuse{⟨*label*⟩}

These are direct wrappers around `\tag_struct_begin:n`, `\tag_struct_end:` and `\tag_struct_use:n`. The commands and their argument are documentated in the `tagpdf-struct` module.

4 Debugging

\ShowTagging \ShowTagging {⟨*key-val*⟩}

This is a generic function to output various debugging helps. It not necessarily stops the compilation. The keys and their function are described below.

mc-data␣(show-key) mc-data = ⟨*number*⟩

This key is (currently?) relevant for lua mode only. It shows the data of all mc-chunks created so far. It is accurate only after shipout (and perhaps a second compilation), so typically should be issued after a newpage. The value is a positive integer and sets the first mc-shown. If no value is given, 1 is used and so all mc-chunks created so far are shown.

mc-current␣(show-key) mc-current

This key shows the number and the tag of the currently open mc-chunk. If no chunk is open it shows only the state of the abs count. It works in all mode, but the output in luamode looks different.

mc-marks␣(show-key) mc-marks = show|use

This key helps to debug the page marks. It should only be used at shipout in header or footer.

struct-stack␣(show-key) struct-stack = log|show

This key shows the current structure stack. With `log` the info is only written to the log-file, `show` stops the compilation and shows on the terminal. If no value is used, then the default is `show`.

5 Extension commands

The following commands and code parts are not core command of tagpdf. They either provide work-arounds for missing functionality elsewhere, or do a first step to apply tagpdf commands to document commands.

The commands and keys should be view as experimental!

This part will be regularly revisited to check if the code should go to a better place or can be improved and so can change easily.

5.1 Fake space

`\pdffakespace` (lua-only) This provides a lua-version of the `\pdffakespace` primitive of pdftex.

5.2 Paratagging

This is a first try to make use of the new paragraph hooks in a current LaTeX to automate the tagging of paragraph. It requires sane paragraph nesting, faulty code, e.g. a missing `\par` at the end of a low-level vbox can highly confuse the tagging. The tags should be carefully checked if this is used.

`paratagging␣(setup-key)` `paratagging = true|false`
`paratagging-show␣(setup-key)` `paratagging-show = true|false`

This keys can be used in `\tagpdfsetup` and enable/disable paratagging. `paratagging-show` puts small red numbers at the begin and end of a paragraph. This is meant as a debugging help. The number are boxes and have a (tiny) height, so they can affect typesetting.

`\tagpdfparaOn` These commands allow to enable/disable para tagging too and are a bit faster then
`\tagpdfparaOff` `\tagpdfsetup`. But I'm not sure if the names are good.

`\tagpdfsuppressmarks` This command allows to suppress the creation of the marks. It takes an argument which should normally be one of the mc-commands, puts a group around it and suppress the marks creation in this group. This command should be used if the begin and end command are at different boxing levels. E.g.

```
\@hangfrom
 {
  \tagstructbegin{tag=H1}%
  \tagmcbegin    {tag=H1}%
  #2
 }
 {#3\tagpdfsuppressmarks{\tagmcend}\tagstructend}%
```

5.3 Header and footer

Header and footer are automatically excluded from tagging. This can be disabled with the following key. If some real content is in the header and footer, tagging must be restarted there explicitly. The key accepts the values `true` which surrounds the header with an artifact mc-chunk, `false` which disables the automatic tagging, and `pagination` which additionally adds an artifact structure with an pagination attribute.

`exclude-header-footer␣(setup-key)` `exclude-header-footer = true|false|pagination`

5.4 Link tagging

Links need a special structure and cross reference system. This is added through hooks of the l3pdfannot module and will work automatically if tagging is activated.

Links should (probably) have an alternative text in the Contents key. It is unclear which text this should be and how to get it. Currently the code simply adds the fix texts `url` and `ref`. Another text can be added by changing the dictionary value:

```
\pdfannot_dict_put:nnn
{ link/GoTo }
{ Contents }
{ (ref) }
```

6 User commands and extensions of document commands

```
1 ⟨@@=tag⟩
2 ⟨*header⟩
3 \ProvidesExplPackage {tagpdf-user} {2023-08-04} {0.98k}
4   {tagpdf - user commands}
5 ⟨/header⟩
```

7 Setup and preamble commands

\tagpdfsetup

```
6 ⟨base⟩\NewDocumentCommand \tagpdfsetup { m }{}
7 ⟨*package⟩
8 \RenewDocumentCommand \tagpdfsetup { m }
9   {
10     \keys_set:nn { __tag / setup } { #1 }
11   }
12 ⟨/package⟩
```

(*End of definition for* \tagpdfsetup. *This function is documented on page 33.*)

\tag_tool:n This is a first definition of the tool command. Currently it uses key-val, but this should
\tagtool be probably be flattened to speed it up.

```
13 ⟨base⟩\cs_new_protected:Npn\tag_tool:n #1 {}
14 ⟨base⟩\cs_set_eq:NN\tagtool\tag_tool:n
15 ⟨*package⟩
16 \cs_set_protected:Npn\tag_tool:n #1
17   {
18     \tag_if_active:T { \keys_set:nn {tag / tool}{#1} }
19   }
20 \cs_set_eq:NN\tagtool\tag_tool:n
21 ⟨/package⟩
```

(*End of definition for* \tag_tool:n *and* \tagtool. *These functions are documented on page 33.*)

8 Commands for the mc-chunks

\tagmcbegin
\tagmcend
\tagmcuse

```
22 ⟨*base⟩
23 \NewDocumentCommand \tagmcbegin { m }
24   {
25     \tag_mc_begin:n {#1}
26   }
27
28
29 \NewDocumentCommand \tagmcend {  }
30   {
31     \tag_mc_end:
32   }
33
34 \NewDocumentCommand \tagmcuse { m }
35   {
36     \tag_mc_use:n {#1}
37   }
38 ⟨/base⟩
```

(*End of definition for* \tagmcbegin, \tagmcend, *and* \tagmcuse. *These functions are documented on page 33.*)

\tagmcifinTF   This is a wrapper around \tag_mc_if_in: and tests if an mc is open or not. It is mostly of importance for pdflatex as lualatex doesn't mind much if a mc tag is not correctly closed. Unlike the expl3 command it is not expandable.

```
39 ⟨*package⟩
40 \NewDocumentCommand \tagmcifinTF { m m }
41   {
42     \tag_mc_if_in:TF { #1 } { #2 }
43   }
44 ⟨/package⟩
```

(*End of definition for* \tagmcifinTF. *This function is documented on page 33.*)

9 Commands for the structure

\tagstructbegin
\tagstructend
\tagstructuse

These are structure related user commands. There are direct wrapper around the expl3 variants.

```
45 ⟨*base⟩
46 \NewDocumentCommand \tagstructbegin { m }
47   {
48     \tag_struct_begin:n {#1}
49   }
50
51 \NewDocumentCommand \tagstructend {  }
52   {
53     \tag_struct_end:
54   }
55
56 \NewDocumentCommand \tagstructuse { m }
57   {
```

```
58        \tag_struct_use:n {#1}
59      }
60 ⟨/base⟩
```

(*End of definition for* \tagstructbegin *,* \tagstructend *, and* \tagstructuse *. These functions are documented on page 34.*)

10   Debugging

\ShowTagging   This is a generic command for various show commands. It takes a keyval list, the various keys are implemented below.

```
61 ⟨∗package⟩
62 \NewDocumentCommand\ShowTagging { m }
63   {
64      \keys_set:nn { __tag / show }{ #1}
65
66   }
```

(*End of definition for* \ShowTagging*. This function is documented on page 34.*)

mc-data␣(show-key)   This key is (currently?) relevant for lua mode only. It shows the data of all mc-chunks created so far. It is accurate only after shipout, so typically should be issued after a newpage. With the optional argument the minimal number can be set.

```
67 \keys_define:nn { __tag / show }
68   {
69      mc-data .code:n =
70        {
71           \sys_if_engine_luatex:T
72             {
73                \lua_now:e{ltx.__tag.trace.show_all_mc_data(#1,\__tag_get_mc_abs_cnt:,0)}
74             }
75        }
76      ,mc-data .default:n = 1
77   }
78
```

(*End of definition for* mc-data (show-key)*. This function is documented on page 34.*)

mc-current␣(show-key)   This shows some info about the current mc-chunk. It works in generic and lua-mode.

```
79 \keys_define:nn { __tag / show }
80   { mc-current .code:n =
81        {
82           \bool_if:NTF \g__tag_mode_lua_bool
83             {
84                \sys_if_engine_luatex:T
85                  {
86                     \int_compare:nNnTF
87                       { -2147483647 }
88                          =
89                          {
90                             \lua_now:e
91                               {
92                                  tex.print
```

38

```
93                    (tex.getattribute
94                      (luatexbase.attributes.g__tag_mc_cnt_attr))
95                  }
96              }
97              {
98                \lua_now:e
99                  {
100                    ltx.__tag.trace.log
101                      (
102                        "mc-current:~no~MC~open,~current~abscnt
103                        =\__tag_get_mc_abs_cnt:"
104                        ,0
105                      )
106                    texio.write_nl("")
107                  }
108              }
109              {
110                \lua_now:e
111                  {
112                    ltx.__tag.trace.log
113                      (
114                        "mc-current:~abscnt=\__tag_get_mc_abs_cnt:=="
115                        ..
116                        tex.getattribute(luatexbase.attributes.g__tag_mc_cnt_attr)
117                        ..
118                        "~=>tag="
119                        ..
120                        tostring
121                          (ltx.__tag.func.get_tag_from
122                            (tex.getattribute
123                              (luatexbase.attributes.g__tag_mc_type_attr)))
124                        ..
125                        "="
126                        ..
127                        tex.getattribute
128                          (luatexbase.attributes.g__tag_mc_type_attr)
129                        ,0
130                      )
131                    texio.write_nl("")
132                  }
133              }
134            }
135          }
136          {
137            \msg_note:nn{ tag }{ mc-current }
138          }
139        }
140    }
```

(End of definition for mc-current *(show-key). This function is documented on page 34.)*

mc-marks␣(show-key)   It maps the mc-marks into the sequences and then shows them. This allows to inspect the first and last mc-Mark on a page. It should only be used in the shipout (header/footer).

```
141 \keys_define:nn { __tag / show }
```

```
142    {
143      mc-marks .choice: ,
144      mc-marks / show .code:n =
145        {
146          \__tag_mc_get_marks:
147          \__tag_check_if_mc_in_galley:TF
148            {
149             \iow_term:n {Marks~from~this~page:~}
150            }
151            {
152              \iow_term:n {Marks~from~a~previous~page:~}
153            }
154          \seq_show:N \l__tag_mc_firstmarks_seq
155          \seq_show:N \l__tag_mc_botmarks_seq
156          \__tag_check_if_mc_tmb_missing:T
157            {
158              \iow_term:n {BDC~missing~on~this~page!}
159            }
160          \__tag_check_if_mc_tme_missing:T
161            {
162              \iow_term:n {EMC~missing~on~this~page!}
163            }
164        },
165      mc-marks / use .code:n =
166        {
167          \__tag_mc_get_marks:
168          \__tag_check_if_mc_in_galley:TF
169          { Marks~from~this~page:~}
170          { Marks~from~a~previous~page:~}
171          \seq_use:Nn \l__tag_mc_firstmarks_seq {,~}\quad
172          \seq_use:Nn \l__tag_mc_botmarks_seq {,~}\quad
173          \__tag_check_if_mc_tmb_missing:T
174            {
175              BDC~missing~
176            }
177          \__tag_check_if_mc_tme_missing:T
178            {
179              EMC~missing
180            }
181        },
182       mc-marks .default:n = show
183      }
```

(End of definition for `mc-marks` *(show-key). This function is documented on page 34.)*

struct-stack␣(show-key)

```
184  \keys_define:nn { __tag / show }
185    {
186       struct-stack .choice:
187      ,struct-stack / log .code:n = \seq_log:N \g__tag_struct_tag_stack_seq
188      ,struct-stack / show .code:n = \seq_show:N \g__tag_struct_tag_stack_seq
189      ,struct-stack .default:n = show
190    }
```

(End of definition for `struct-stack` *(show-key). This function is documented on page 34.)*

11 Commands to extend document commands

The following commands and code parts are not core command of tagpdf. They either provide work-arounds for missing functionality elsewhere, or do a first step to apply tagpdf commands to document commands. This part should be regularly revisited to check if the code should go to a better place or can be improved.

11.1 new ref system

Until l3ref is in the kernel, we provide a definition for `\newlabeldata` in the aux-file to avoid errors if a document switches between tagging and non-tagging.

```
191 ⟨/package⟩
192 ⟨base⟩\AddToHook{begindocument}
193 ⟨base⟩ {\immediate\write\@mainaux{\string\providecommand\string\newlabeldata[2]{}}}
194 ⟨*package⟩
```

11.2 Document structure

`\g__tag_root_default_tl`
activate␣(setup-key)

```
195 \tl_new:N\g__tag_root_default_tl
196 \tl_gset:Nn\g__tag_root_default_tl {Document}
197
198 \hook_gput_code:nnn{begindocument}{tagpdf}{\tagstructbegin{tag=\g__tag_root_default_tl}}
199 \hook_gput_code:nnn{tagpdf/finish/before}{tagpdf}{\tagstructend}
200
201 \keys_define:nn { __tag / setup}
202  {
203    activate  .code:n =
204     {
205       \keys_set:nn { __tag / setup }
206         { activate-mc,activate-tree,activate-struct }
207       \tl_gset:Nn\g__tag_root_default_tl {#1}
208     },
209    activate .default:n = Document
210  }
211
```

(*End of definition for* `\g__tag_root_default_tl` *and* activate *(setup-key). This function is documented on page 33.*)

11.3 Structure destinations

In TeXlive 2022 pdftex and luatex will offer support for structure destinations. The pdfmanagement has already backend support. We activate them if the prerequisites are there: structures should be activated, the code in the pdfmanagement must be there. Structure destinations are actually PDF 2.0 only but they don't harm in older PDF and can improve html export.

```
212 \AddToHook{begindocument/before}
213  {
214    \bool_lazy_all:nT
215      {
216        { \g__tag_active_struct_dest_bool }
```

```
217        { \g__tag_active_struct_bool }
218        { \cs_if_exist_p:N \pdf_activate_structure_destination: }
219      }
220      {
221        \tl_set:Nn \l_pdf_current_structure_destination_tl { __tag/struct/\g__tag_struct_stack
222        \pdf_activate_structure_destination:
223      }
224   }
```

11.4   Fake space

\pdffakespace   We need a luatex variant for \pdffakespace. This should probably go into the kernel at some time. We also provide a no-op version for dvi mode

```
225 \sys_if_engine_luatex:T
226   {
227     \NewDocumentCommand\pdffakespace { }
228       {
229         \__tag_fakespace:
230       }
231   }
232 \providecommand\pdffakespace{}
```

(*End of definition for* \pdffakespace. *This function is documented on page 35.*)

11.5   Paratagging

The following are some simple commands to enable/disable paratagging. Probably one should add some checks if we are already in a paragraph.

\l__tag_para_bool   At first some variables.
\l__tag_para_flattened_bool
\l__tag_para_show_bool
\g__tag_para_begin_int
\g__tag_para_end_int
\g__tag_para_main_begin_int
\g__tag_para_main_end_int
\l__tag_para_tag_default_tl
\l__tag_para_tag_tl
\l__tag_para_main_tag_tl

```
233 \bool_new:N \l__tag_para_bool
234 ⟨/package⟩
235 ⟨base⟩\bool_new:N \l__tag_para_flattened_bool
236 ⟨*package⟩
237 \bool_new:N \l__tag_para_show_bool
238 \int_new:N  \g__tag_para_begin_int
239 \int_new:N  \g__tag_para_end_int
240 \int_new:N  \g__tag_para_main_begin_int
241 \int_new:N  \g__tag_para_main_end_int
242 \tl_new:N   \l__tag_para_tag_default_tl
243 \tl_set:Nn  \l__tag_para_tag_default_tl { text }
244 \tl_new:N   \l__tag_para_tag_tl
245 \tl_set:Nn  \l__tag_para_tag_tl { \l__tag_para_tag_default_tl }
246 \tl_new:N   \l__tag_para_main_tag_tl
247 \tl_set:Nn  \l__tag_para_main_tag_tl {text-unit}
```

(*End of definition for* \l__tag_para_bool *and others.*)

parataging␣(setup-key)   These keys enable/disable locally paratagging, and the debug modus. It can affect the
paratagging-show␣(setup-key)   typesetting if paratagging-show is used. The small numbers are boxes and they have a
paratag␣(setup-key)   (small) height. The paratag key sets the tag used by the next automatic paratagging,
paratag␣(tool-key)   it can also be changed with \tag_tool:n
unittag␣(tool-key)
para-flattened␣(tool-key)
```
248 \keys_define:nn { __tag / setup }
```

```
249   {
250     paratagging      .bool_set:N = \l__tag_para_bool,
251     paratagging-show .bool_set:N = \l__tag_para_show_bool,
252     paratag          .tl_set:N   = \l__tag_para_tag_tl
253   }
254 \keys_define:nn { tag / tool}
255   {
256     paratag .tl_set:N = \l__tag_para_tag_tl,
257     unittag .tl_set:N = \l__tag_para_main_tag_tl,
258     para-flattened .bool_set:N = \l__tag_para_flattened_bool
259   }
```

(*End of definition for* paratagging (setup-key) *and others. These functions are documented on page* .)

This fills the para hooks with the needed code.

```
260 \cs_new_protected:Npn \__tag_check_para_begin_show:nn #1 #2

373          }
374      }
375    }
376 ⟨/package⟩
```

\tagpdfparaOn This two command switch para mode on and off. \tagpdfsetup could be used too but
\tagpdfparaOff is longer. An alternative is \tag_tool:n{para=false}

```
377 ⟨base⟩\newcommand\tagpdfparaOn {}
378 ⟨base⟩\newcommand\tagpdfparaOff{}
379 ⟨*package⟩
380 \renewcommand\tagpdfparaOn {\bool_set_true:N \l__tag_para_bool}
381 \renewcommand\tagpdfparaOff{\bool_set_false:N \l__tag_para_bool}
382 \keys_define:nn { tag / tool}
383   {
384     para .bool_set:N = \l__tag_para_bool,
385     para-flattened .bool_set:N = \l__tag_para_flattened_bool,
386   }
```

(*End of definition for* \tagpdfparaOn *and* \tagpdfparaOff. *These functions are documented on page*
35.)

\tagpdfsuppressmarks This command allows to suppress the creation of the marks. It takes an argument
which should normally be one of the mc-commands, puts a group around it and suppress
the marks creation in this group. This command should be used if the begin and end
command are at different boxing levels. E.g.

  \@hangfrom
  {

45

```
  \tagstructbegin{tag=H1}%
  \tagmcbegin    {tag=H1}%
  #2
 }
 {#3\tagpdfsuppressmarks{\tagmcend}\tagstructend}%

387 \NewDocumentCommand\tagpdfsuppressmarks{m}
388   {{\use:c{__tag_mc_disable_marks:} #1}}
```

(*End of definition for* `\tagpdfsuppressmarks`. *This function is documented on page 35.*)

11.6   Header and footer

Header and footer should normally be tagged as artifacts. The following code requires the new hooks. For now we allow to disable this function, but probably the code should always there at the end. TODO check if Pagination should be changeable.

```
389 \cs_new_protected:Npn\__tag_hook_kernel_before_head:{}
390 \cs_new_protected:Npn\__tag_hook_kernel_after_head:{}
391 \cs_new_protected:Npn\__tag_hook_kernel_before_foot:{}
392 \cs_new_protected:Npn\__tag_hook_kernel_after_foot:{}
393
394 \AddToHook{begindocument}
395  {
396   \cs_if_exist:NT \@kernel@before@head
397    {
398      \tl_put_right:Nn \@kernel@before@head {\__tag_hook_kernel_before_head:}
399      \tl_put_left:Nn  \@kernel@after@head  {\__tag_hook_kernel_after_head:}
400      \tl_put_right:Nn \@kernel@before@foot {\__tag_hook_kernel_before_foot:}
401      \tl_put_left:Nn  \@kernel@after@foot  {\__tag_hook_kernel_after_foot:}
402    }
403  }
404
405 \bool_new:N \g__tag_saved_in_mc_bool
406 \cs_new_protected:Npn \__tag_exclude_headfoot_begin:
407  {
408     \bool_set_false:N  \l__tag_para_bool
409     \bool_if:NTF \g__tag_mode_lua_bool
410      {
411       \tag_mc_end_push:
412      }
413      {
414        \bool_gset_eq:NN   \g__tag_saved_in_mc_bool \g__tag_in_mc_bool
415        \bool_gset_false:N \g__tag_in_mc_bool
416      }
417     \tag_mc_begin:n {artifact}
418     \tag_stop:n{headfoot}
419  }
420 \cs_new_protected:Npn \__tag_exclude_headfoot_end:
421  {
422     \tag_start:n{headfoot}
423     \tag_mc_end:
424     \bool_if:NTF \g__tag_mode_lua_bool
425      {
426       \tag_mc_begin_pop:n{}
```

46

```
427        }
428        {
429          \bool_gset_eq:NN \g__tag_in_mc_bool\g__tag_saved_in_mc_bool
430        }
431    }
```

This version allows to use an Artifact structure

```
432  \__tag_attr_new_entry:nn {__tag/attr/pagination}{/O/Artifact/Type/Pagination}
433  \cs_new_protected:Npn \__tag_exclude_struct_headfoot_begin:n #1
434    {
435      \bool_set_false:N  \l__tag_para_bool
436      \bool_if:NTF \g__tag_mode_lua_bool
437        {
438         \tag_mc_end_push:
439        }
440        {
441          \bool_gset_eq:NN   \g__tag_saved_in_mc_bool \g__tag_in_mc_bool
442          \bool_gset_false:N \g__tag_in_mc_bool
443        }
444      \tag_struct_begin:n{tag=Artifact,attribute-class=__tag/attr/#1}
445      \tag_mc_begin:n {artifact=#1}
446      \tag_stop:n{headfoot}
447    }
448
449  \cs_new_protected:Npn \__tag_exclude_struct_headfoot_end:
450    {
451      \tag_start:n{headfoot}
452      \tag_mc_end:
453      \tag_struct_end:
454      \bool_if:NTF \g__tag_mode_lua_bool
455        {
456         \tag_mc_begin_pop:n{}
457        }
458        {
459          \bool_gset_eq:NN \g__tag_in_mc_bool\g__tag_saved_in_mc_bool
460        }
461    }
```

And now the keys

```
462  \keys_define:nn { __tag / setup }
463    {
464      exclude-header-footer .choice:,
465      exclude-header-footer / true .code:n =
466        {
467          \cs_set_eq:NN \__tag_hook_kernel_before_head: \__tag_exclude_headfoot_begin:
468          \cs_set_eq:NN \__tag_hook_kernel_before_foot: \__tag_exclude_headfoot_begin:
469          \cs_set_eq:NN \__tag_hook_kernel_after_head:  \__tag_exclude_headfoot_end:
470          \cs_set_eq:NN \__tag_hook_kernel_after_foot:  \__tag_exclude_headfoot_end:
471        },
472      exclude-header-footer / pagination .code:n =
473        {
474          \cs_set:Nn \__tag_hook_kernel_before_head: { \__tag_exclude_struct_headfoot_begin:n {pa
475          \cs_set:Nn \__tag_hook_kernel_before_foot: { \__tag_exclude_struct_headfoot_begin:n {pa
```

```
476        \cs_set_eq:NN \__tag_hook_kernel_after_head:  \__tag_exclude_struct_headfoot_end:
477        \cs_set_eq:NN \__tag_hook_kernel_after_foot:  \__tag_exclude_struct_headfoot_end:
478      },
479    exclude-header-footer / false .code:n =
480      {
481        \cs_set_eq:NN \__tag_hook_kernel_before_head: \prg_do_nothing:
482        \cs_set_eq:NN \__tag_hook_kernel_before_foot: \prg_do_nothing:
483        \cs_set_eq:NN \__tag_hook_kernel_after_head:  \prg_do_nothing:
484        \cs_set_eq:NN \__tag_hook_kernel_after_foot:  \prg_do_nothing:
485      },
486    exclude-header-footer .default:n = true,
487    exclude-header-footer .initial:n = true
488  }
```

(*End of definition for* `exclude-header-footer` *(setup-key). This function is documented on page* *.*)

11.7 Links

We need to close and reopen mc-chunks around links. Currently we handle URI and GoTo (internal) links. Links should have an alternative text in the Contents key. It is unclear which text this should be and how to get it.

```
489  \hook_gput_code:nnn
490    {pdfannot/link/URI/before}
491    {tagpdf}
492    {
493      \tag_mc_end_push:
494      \tag_struct_begin:n { tag=Link }
495      \tag_mc_begin:n { tag=Link }
496      \pdfannot_dict_put:nnx
497        { link/URI }
498        { StructParent }
499        { \tag_struct_parent_int: }
500    }
501
502  \hook_gput_code:nnn
503    {pdfannot/link/URI/after}
504    {tagpdf}
505    {
506      \tag_struct_insert_annot:xx {\pdfannot_link_ref_last:}{\tag_struct_parent_int:}
507      \tag_mc_end:
508      \tag_struct_end:
509      \tag_mc_begin_pop:n{}
510    }
511
512  \hook_gput_code:nnn
513    {pdfannot/link/GoTo/before}
514    {tagpdf}
515    {
516      \tag_mc_end_push:
517      \tag_struct_begin:n{tag=Link}
518      \tag_mc_begin:n{tag=Link}
519      \pdfannot_dict_put:nnx
520        { link/GoTo }
521        { StructParent }
```

```
522        { \tag_struct_parent_int: }
523    }
524
525 \hook_gput_code:nnn
526    {pdfannot/link/GoTo/after}
527    {tagpdf}
528    {
529      \tag_struct_insert_annot:xx {\pdfannot_link_ref_last:}{\tag_struct_parent_int:}
530      \tag_mc_end:
531      \tag_struct_end:
532      \tag_mc_begin_pop:n{}
533
534    }
535
536 % "alternative descriptions " for PAX3. How to get better text here??
537 \pdfannot_dict_put:nnn
538  { link/URI }
539  { Contents }
540  { (url) }
541
542 \pdfannot_dict_put:nnn
543  { link/GoTo }
544  { Contents }
545  { (ref) }
546
</package>
```

3 \ProvidesExplPackage {tagpdf-tree-code} {2023-08-04} {0.98k}
4 {part of tagpdf - code related to writing trees and dictionaries to the pdf}
5 ⟨/header⟩
```

1 Trees, pdfmanagement and finalization code

The code to finish the structure is in a hook. This will perhaps at the end be a kernel hook. TODO check right place for the code The pdfmanagement code is the kernel hook after shipout/lastpage so all code affecting it should be before. Objects can be written later, at least in pdf mode.

```
6  ⟨*package⟩
7  \hook_gput_code:nnn{begindocument}{tagpdf}
8    {
9      \bool_if:NT \g__tag_active_tree_bool
10       {
11         \sys_if_output_pdf:TF
12           {
13             \AddToHook{enddocument/end} { \__tag_finish_structure: }
14           }
15           {
16             \AddToHook{shipout/lastpage} { \__tag_finish_structure: }
17           }
18       }
19   }
```

1.1 Check structure

__tag_tree_final_checks:

```
20 \cs_new_protected:Npn \__tag_tree_final_checks:
21   {
22     \int_compare:nNnF {\seq_count:N\g__tag_struct_stack_seq}={1}
23       {
24         \msg_warning:nn {tag}{tree-struct-still-open}
25         \int_step_inline:nnn{2}{\seq_count:N\g__tag_struct_stack_seq}
26         {\tag_struct_end:}
27       }
28   }
```

(*End of definition for* __tag_tree_final_checks:.)

1.2 Catalog: MarkInfo and StructTreeRoot

The StructTreeRoot and the MarkInfo entry must be added to the catalog. We do it late so that we can win, but before the pdfmanagement hook.

`__tag/struct/0` This is the object for the root object, the StructTreeRoot

```
29 \pdf_object_new:n { __tag/struct/0 }
```

(*End of definition for* `__tag/struct/0`.)

```
30 \hook_gput_code:nnn{shipout/lastpage}{tagpdf}
31   {
32     \bool_if:NT \g__tag_active_tree_bool
33       {
34         \pdfmanagement_add:nnn { Catalog / MarkInfo } { Marked } { true }
35         \pdfmanagement_add:nnx
36           { Catalog }
37           { StructTreeRoot }
38           { \pdf_object_ref:n { __tag/struct/0 } }
39       }
40   }
```

1.3 Writing the IDtree

The ID are currently quite simple: every structure has an ID build from the prefix ID together with the structure number padded with enough zeros to that we get directly an lexical order. We ship them out in bundles At first a seq to hold the references for the kids

`\g__tag_tree_id_pad_int`

```
41 \int_new:N\g__tag_tree_id_pad_int
```

(*End of definition for* `\g__tag_tree_id_pad_int`.)

Now we get the needed padding

```
42 \cs_generate_variant:Nn \tl_count:n {e}
43 \hook_gput_code:nnn{begindocument}{tagpdf}
44   {
45     \int_gset:Nn\g__tag_tree_id_pad_int
46       {\tl_count:e { \__tag_ref_value_lastpage:nn{tagstruct}{1000}}+1}
47   }
48
```

This is the main code to write the tree it basically splits the existing structure numbers in chunks of length 50 TODO consider is 50 is a good length.

```
49 \cs_new_protected:Npn \__tag_tree_write_idtree:
50   {
51     \tl_clear:N \l__tag_tmpa_tl
52     \tl_clear:N \l__tag_tmpb_tl
53     \int_zero:N \l__tag_tmpa_int
54     \int_step_inline:nn {\c@g__tag_struct_abs_int}
55       {
56         \int_incr:N\l__tag_tmpa_int
57         \tl_put_right:Nx \l__tag_tmpa_tl
58           {
59             \__tag_struct_get_id:n{##1}~\pdf_object_ref:n{__tag/struct/##1}~
```

51

```
60                     }
61                 \int_compare:nNnF {\l__tag_tmpa_int}<{50} %
62                   {
63                     \pdf_object_unnamed_write:nx {dict}
64                       { /Limits~[\__tag_struct_get_id:n{##1-\l__tag_tmpa_int+1}~\__tag_struct_get_id:r
65                         /Names~[\l__tag_tmpa_tl]
66                       }
67                     \tl_put_right:Nx\l__tag_tmpb_tl {\pdf_object_ref_last:\c_space_tl}
68                     \int_zero:N \l__tag_tmpa_int
69                     \tl_clear:N \l__tag_tmpa_tl
70                   }
71             }
72         \tl_if_empty:NF \l__tag_tmpa_tl
73           {
74             \pdf_object_unnamed_write:nx {dict}
75               {
76                 /Limits~
77                   [\__tag_struct_get_id:n{\c@g__tag_struct_abs_int-\l__tag_tmpa_int+1}~
78                    \__tag_struct_get_id:n{\c@g__tag_struct_abs_int}]
79                 /Names~[\l__tag_tmpa_tl]
80               }
81             \tl_put_right:Nx\l__tag_tmpb_tl {\pdf_object_ref_last:}
82           }
83         \pdf_object_unnamed_write:nx {dict}{/Kids~[\l__tag_tmpb_tl]}
84         \__tag_prop_gput:cnx
85             { g__tag_struct_0_prop }
86             { IDTree }
87             { \pdf_object_ref_last: }
88     }
```

1.4   Writing structure elements

The following commands are needed to write out the structure.

__tag_tree_write_structtreeroot: This writes out the root object.

```
89  \pdf_version_compare:NnTF < {2.0}
90    {
91      \cs_new_protected:Npn \__tag_tree_write_structtreeroot:
92        {
93          \__tag_prop_gput:cnx
94            { g__tag_struct_0_prop }
95            { ParentTree }
96            { \pdf_object_ref:n { __tag/tree/parenttree } }
97          \__tag_prop_gput:cnx
98            { g__tag_struct_0_prop }
99            { RoleMap }
100           { \pdf_object_ref:n { __tag/tree/rolemap } }
101         \__tag_struct_fill_kid_key:n { 0 }
102         \__tag_struct_get_dict_content:nN { 0 } \l__tag_tmpa_tl
103         \pdf_object_write:nnx
104             { __tag/struct/0 }
105             {dict}
106             {
107               \l__tag_tmpa_tl
```

```
108                    }
109               }
110          }
```

no RoleMap in pdf 2.0

```
111    {
112      \cs_new_protected:Npn \__tag_tree_write_structtreeroot:
113         {
114            \__tag_prop_gput:cnx
115               { g__tag_struct_0_prop }
116               { ParentTree }
117               { \pdf_object_ref:n { __tag/tree/parenttree } }
118            \__tag_struct_fill_kid_key:n { 0 }
119            \__tag_struct_get_dict_content:nN { 0 } \l__tag_tmpa_tl
120            \pdf_object_write:nnx
121               { __tag/struct/0 }
122               {dict}
123               {
124                \l__tag_tmpa_tl
125               }
126         }
127    }
```

(*End of definition for* `\__tag_tree_write_structtreeroot:`.)

`\__tag_tree_write_structelements:` This writes out the other struct elems, the absolute number is in the counter.

```
128  \cs_new_protected:Npn \__tag_tree_write_structelements:
129    {
130      \int_step_inline:nnnn {1}{1}{\c@g__tag_struct_abs_int}
131        {
132          \__tag_struct_write_obj:n { ##1 }
133        }
134    }
```

(*End of definition for* `\__tag_tree_write_structelements:`.)

1.5 ParentTree

`__tag/tree/parenttree` The object which will hold the parenttree

```
135  \pdf_object_new:n { __tag/tree/parenttree }
```

(*End of definition for* `__tag/tree/parenttree`.)

The ParentTree maps numbers to objects or (if the number represents a page) to arrays of objects. The numbers refer to two dictinct types of entries: page streams and real objects like annotations. The numbers must be distinct and ordered. So we rely on abspage for the pages and put the real objects at the end. We use a counter to have a chance to get the correct number if code is processed twice.

`\c@g__tag_parenttree_obj_int` This is a counter for the real objects. It starts at the absolute last page value. It relies on l3ref.

```
136  \newcounter  { g__tag_parenttree_obj_int }
137  \hook_gput_code:nnn{begindocument}{tagpdf}
138    {
139      \int_gset:Nn
```

```
140        \c@g__tag_parenttree_obj_int
141        { \__tag_ref_value_lastpage:nn{abspage}{100}  }
142      }
```

(*End of definition for* \c@g__tag_parenttree_obj_int.)

We store the number/object references in a tl-var. If more structure is needed one could switch to a seq.

\g__tag_parenttree_objr_tl

```
143  \tl_new:N \g__tag_parenttree_objr_tl
```

(*End of definition for* \g__tag_parenttree_objr_tl.)

__tag_parenttree_add_objr:nn   This command stores a StructParent number and a objref into the tl var. This is only for objects like annotations, pages are handled elsewhere.

```
144  \cs_new_protected:Npn \__tag_parenttree_add_objr:nn #1 #2 %#1 StructParent number, #2 objref
145    {
146      \tl_gput_right:Nx \g__tag_parenttree_objr_tl
147        {
148          #1 \c_space_tl #2 ^^J
149        }
150    }
```

(*End of definition for* __tag_parenttree_add_objr:nn.)

\l__tag_parenttree_content_tl   A tl-var which will get the page related parenttree content.

```
151  \tl_new:N \l__tag_parenttree_content_tl
```

(*End of definition for* \l__tag_parenttree_content_tl.)

__tag_tree_fill_parenttree: This is the main command to assemble the page related entries of the parent tree. It wanders through the pages and the mcid numbers and collects all mcid of one page.

```
152  \cs_new_protected:Npn \__tag_tree_parenttree_rerun_msg: {}
153  \cs_new_protected:Npn \__tag_tree_fill_parenttree:
154    {
155      \int_step_inline:nnnn{1}{1}{\__tag_ref_value_lastpage:nn{abspage}{-1}} %not quite clear i
156        { %page ##1
157          \prop_clear:N \l__tag_tmpa_prop
158          \int_step_inline:nnnn{1}{1}{\__tag_ref_value_lastpage:nn{tagmcabs}{-1}}
159            {
160              %mcid####1
161              \int_compare:nT
162                {\__tag_ref_value:enn{mcid-####1}{tagabspage}{-1}=##1} %mcid is on current page
163                {% yes
164                  \prop_put:Nxx
165                    \l__tag_tmpa_prop
166                    {\__tag_ref_value:enn{mcid-####1}{tagmcid}{-1}}
167                    {\prop_item:Nn \g__tag_mc_parenttree_prop {####1}}
168                }
169            }
170          \tl_put_right:Nx\l__tag_parenttree_content_tl
171            {
172              \int_eval:n {##1-1}\c_space_tl
173              [\c_space_tl %]
174            }
```

54

```

195                 }
196              }
197          }
198        \tl_put_right:Nn
199          \l__tag_parenttree_content_tl
200          {%[
201            ]^^J
202          }
203      }
204    }
```

(*End of definition for* __tag_tree_fill_parenttree:.)

__tag_tree_lua_fill_parenttree: This is a special variant for luatex. lua mode must/can do it differently.

```
205 \cs_new_protected:Npn \__tag_tree_lua_fill_parenttree:
206   {
207     \tl_set:Nn \l__tag_parenttree_content_tl
208       {
209         \lua_now:e
210           {
211             ltx.__tag.func.output_parenttree
212               (
213                 \int_use:N\g_shipout_readonly_int
214               )
215           }
216       }
217   }
```

(*End of definition for* __tag_tree_lua_fill_parenttree:.)

__tag_tree_write_parenttree: This combines the two parts and writes out the object. TODO should the check for lua be moved into the backend code?

```
218 \cs_new_protected:Npn \__tag_tree_write_parenttree:
219   {
```

```
220    \bool_if:NTF \g__tag_mode_lua_bool
221      {
222        \__tag_tree_lua_fill_parenttree:
223      }
224      {
225        \__tag_tree_fill_parenttree:
226      }
227    \__tag_tree_parenttree_rerun_msg:
228    \tl_put_right:NV \l__tag_parenttree_content_tl\g__tag_parenttree_objr_tl
229    \pdf_object_write:nnx  { __tag/tree/parenttree }{dict}
230      {
231        /Nums\c_space_tl [\l__tag_parenttree_content_tl]
232      }
233  }
```

(*End of definition for* `\__tag_tree_write_parenttree:`.)

1.6   Rolemap dictionary

The Rolemap dictionary describes relations between new tags and standard types. The main part here is handled in the role module, here we only define the command which writes it to the PDF.

`__tag/tree/rolemap`   At first we reserve again an object.

```
234  \pdf_version_compare:NnT < {2.0}
235    {
236      \pdf_object_new:n { __tag/tree/rolemap }
237    }
```

(*End of definition for* `__tag/tree/rolemap`.)

`\__tag_tree_write_rolemap:`   This writes out the rolemap, basically it simply pushes out the dictionary which has been filled in the role module.

```
238  \pdf_version_compare:NnTF < {2.0}
239    {
240      \cs_new_protected:Npn \__tag_tree_write_rolemap:
241        {
242          \prop_map_inline:Nn\g__tag_role_rolemap_prop
243            {
244              \tl_if_eq:nnF {##1}{##2}
245                {
246                  \pdfdict_gput:nnx {g__tag_role/RoleMap_dict}
247                  {##1}
248                  {\pdf_name_from_unicode_e:n{##2}}
249                }
250            }
251          \pdf_object_write:nnx  { __tag/tree/rolemap }{dict}
252            {
253              \pdfdict_use:n{g__tag_role/RoleMap_dict}
254            }
255        }
256    }
257    {
258      \cs_new_protected:Npn \__tag_tree_write_rolemap:{}
```

```
259      }
260
```

(*End of definition for* `\__tag_tree_write_rolemap:`.)

1.7 Classmap dictionary

Classmap and attributes are setup in the struct module, here is only the code to write it out. It should only done if values have been used.

```
261  \cs_new_protected:Npn \__tag_tree_write_classmap:
262    {
263      \tl_clear:N \l__tag_tmpa_tl
264      \seq_gremove_duplicates:N \g__tag_attr_class_used_seq
265      \seq_set_map:NNn \l__tag_tmpa_seq \g__tag_attr_class_used_seq
266        {
267          ##1\c_space_tl
268          <<
269            \prop_item:Nn
270              \g__tag_attr_entries_prop
271              {##1}
272          >>
273        }
274      \tl_set:Nx \l__tag_tmpa_tl
275        {
276          \seq_use:Nn
277            \l__tag_tmpa_seq
278            { \iow_newline: }
279        }
280      \tl_if_empty:NF
281        \l__tag_tmpa_tl
282        {
283          \pdf_object_new:n { __tag/tree/classmap }
284          \pdf_object_write:nnx
285            { __tag/tree/classmap }
286            {dict}
287            { \l__tag_tmpa_tl }
288          \__tag_prop_gput:cnx
289            { g__tag_struct_0_prop }
290            { ClassMap }
291            { \pdf_object_ref:n { __tag/tree/classmap }  }
292        }
293    }
```

(*End of definition for* `\__tag_tree_write_classmap:`.)

1.8 Namespaces

Namespaces are handle in the role module, here is the code to write them out. Namespaces are only relevant for pdf2.0.

```
294  \pdf_object_new:n { __tag/tree/namespaces }
```

(*End of definition for* `__tag/tree/namespaces`.)

```
295 \cs_new_protected:Npn \__tag_tree_write_namespaces:
296   {
297     \pdf_version_compare:NnF < {2.0}
298       {
299         \prop_map_inline:Nn \g__tag_role_NS_prop
300           {
301             \pdfdict_if_empty:nF {g__tag_role/RoleMapNS_##1_dict}
302               {
303                 \pdf_object_write:nnx {__tag/RoleMapNS/##1}{dict}
304                   {
305                     \pdfdict_use:n {g__tag_role/RoleMapNS_##1_dict}
306                   }
307                 \pdfdict_gput:nnx{g__tag_role/Namespace_##1_dict}
308                   {RoleMapNS}{\pdf_object_ref:n {__tag/RoleMapNS/##1}}
309               }
310             \pdf_object_write:nnx{tag/NS/##1}{dict}
311               {
312                 \pdfdict_use:n {g__tag_role/Namespace_##1_dict}
313               }
314           }
315         \pdf_object_write:nnx {__tag/tree/namespaces}{array}
316           {
317             \prop_map_tokens:Nn \g__tag_role_NS_prop{\use_ii:nn}
318           }
319       }
320   }
```

(*End of definition for* `\__tag_tree_write_namespaces:`.)

1.9   Finishing the structure

This assembles the various parts. TODO (when tabular are done or if someone requests it): IDTree

```
321 \hook_new:n {tagpdf/finish/before}
322 \cs_new_protected:Npn \__tag_finish_structure:
323   {
324     \bool_if:NT\g__tag_active_tree_bool
325       {
326         \hook_use:n {tagpdf/finish/before}
327         \__tag_tree_final_checks:
328         \__tag_tree_write_parenttree:
329         \__tag_tree_write_idtree:
330         \__tag_tree_write_rolemap:
331         \__tag_tree_write_classmap:
332         \__tag_tree_write_namespaces:
333         \__tag_tree_write_structelements: %this is rather slow!!
334         \__tag_tree_write_structtreeroot:
335       }
336   }
```

(*End of definition for* __tag_finish_structure:*.*)

1.10   StructParents entry for Page

We need to add to the Page resources the `StructParents` entry, this is simply the absolute page number.

```
337 \hook_gput_code:nnn{begindocument}{tagpdf}
338   {
339     \bool_if:NT\g__tag_active_tree_bool
340       {
341         \hook_gput_code:nnn{shipout/before} { tagpdf/structparents }
342           {
343             \pdfmanagement_add:nnx
344               { Page }
345               { StructParents }
346               { \int_eval:n { \g_shipout_readonly_int} }
347           }
348       }
349   }
350 ⟨/package⟩
```

Part IV

The **tagpdf-mc-shared** module
Code related to Marked Content (mc-chunks), code shared by all modes
Part of the tagpdf package

1 Public Commands

\tag_mc_begin:n
\tag_mc_end:

\tag_mc_begin:n{⟨key-values⟩}
\tag_mc_end:

These commands insert the end code of the marked content. They don't end a group and in generic mode it doesn't matter if they are in another group as the starting commands. In generic mode both commands check if they are correctly nested and issue a warning if not.

\tag_mc_use:n

\tag_mc_use:n{⟨label⟩}

These command allow to record a marked content that was stashed away before into the current structure. A marked content can be used only once – the command will issue a warning if an mc is use a second time.

\tag_mc_artifact_group_begin:n
\tag_mc_artifact_group_end:

\tag_mc_artifact_group_begin:n {⟨name⟩}
\tag_mc_artifact_group_end:

New: 2019-11-20

This command pair creates a group with an artifact marker at the begin and the end. Inside the group the tagging commands are disabled. It allows to mark a complete region as artifact without having to worry about user commands with tagging commands. ⟨name⟩ should be a value allowed also for the `artifact` key. It pushes and pops mc-chunks at the begin and end. TODO: document is in tagpdf.tex

\tag_mc_end_push:
\tag_mc_begin_pop:n

\tag_mc_end_push:
\tag_mc_begin_pop:n{⟨key-values⟩}

New: 2021-04-22

If there is an open mc chunk, \tag_mc_end_push: ends it and pushes its tag of the (global) stack. If there is no open chunk, it puts −1 on the stack (for debugging) \tag_-mc_begin_pop:n removes a value from the stack. If it is different from −1 it opens a tag with it. The reopened mc chunk looses info like the alt text for now.

\tag_mc_if_in_p: ⋆
\tag_mc_if_in:*TF* ⋆

\tag_mc_if_in:TF {⟨true code⟩} {⟨false code⟩}

Determines if a mc-chunk is open.

`\tag_mc_reset_box:N` ⋆   `\tag_mc_reset:N {⟨box⟩}`

This resets in lua mode the mc attributes to the one currently in use. It does nothing in generic mode.

2 Public keys

The following keys can be used with `\tag_mc_begin:n`, `\tagmcbegin`, `\tag_mc_begin_pop:n`,

`tag␣(mc-key)` This key is required, unless artifact is used. The value is a tag like `P` or `H1` without a slash at the begin, this is added by the code. It is possible to setup new tags. The value of the key is expanded, so it can be a command. The expansion is passed unchanged to the PDF, so it should with a starting slash give a valid PDF name (some ascii with numbers like `H4` is fine).

`artifact␣(mc-key)` This will setup the marked content as an artifact. The key should be used for content that should be ignored. The key can take one of the values `pagination`, `layout`, `page`, `background` and `notype` (this is the default).

`raw␣(mc-key)` This key allows to add more entries to the properties dictionary. The value must be correct, low-level PDF. E.g. `raw=/Alt (Hello)` will insert an alternative Text.

`alt␣(mc-key)` This key inserts an `/Alt` value in the property dictionary of the BDC operator. The value is handled as verbatim string, commands are not expanded. The value will be expanded first once. If it is empty, nothing will happen.

`actualtext␣(mc-key)` This key inserts an `/ActualText` value in the property dictionary of the BDC operator. The value is handled as verbatim string, commands are not expanded. The value will be expanded first once. If it is empty, nothing will happen.

`label␣(mc-key)` This key sets a label by which one can call the marked content later in another structure (if it has been stashed with the `stash` key). Internally the label name will start with `tagpdf-`.

`stash␣(mc-key)` This "stashes" an mc-chunk: it is not inserted into the current structure. It should be normally be used along with a label to be able to use the mc-chunk in another place.

    The code is splitted into three parts: code shared by all engines, code specific to luamode and code not used by luamode.

3 Marked content code – shared

```
1 ⟨@@=tag⟩
2 ⟨∗header⟩
3 \ProvidesExplPackage {tagpdf-mc-code-shared} {2023-08-04} {0.98k}
4   {part of tagpdf - code related to marking chunks -
5    code shared by generic and luamode }
6 ⟨/header⟩
```

3.1 Variables and counters

MC chunks must be counted. I use a latex counter for the absolute count, so that it is added to \cl@@ckpt and restored e.g. in tabulars and align. \int_new:N \c@g_@@_MCID_int and \tl_put_right:Nn\cl@@ckpt{\@elt{g_uf_test_int}} would work too, but as the name is not expl3 then too, why bother? The absolute counter can be used to label and to check if the page counter needs a reset.

g__tag_MCID_abs_int

```
7 ⟨∗base⟩
8 \newcounter { g__tag_MCID_abs_int }
```

(*End of definition for* g__tag_MCID_abs_int.)

__tag_get_data_mc_counter: This command allows \tag_get:n to get the current state of the mc counter with the keyword mc_counter. By comparing the numbers it can be used to check the number of structure commands in a piece of code.

```
9  \cs_new:Npn \__tag_get_data_mc_counter:
10    {
11      \int_use:N \c@g__tag_MCID_abs_int
12    }
13 ⟨/base⟩
```

(*End of definition for* __tag_get_data_mc_counter:.)

__tag_get_mc_abs_cnt: A (expandable) function to get the current value of the cnt. TODO: duplicate of the previous one, this should be cleaned up.

```
14 ⟨∗shared⟩
15 \cs_new:Npn \__tag_get_mc_abs_cnt: { \int_use:N \c@g__tag_MCID_abs_int }
```

(*End of definition for* __tag_get_mc_abs_cnt:.)

\g__tag_MCID_tmp_bypage_int The following hold the temporary by page number assigned to a mc. It must be defined in the shared code to avoid problems with labels.

```
16 \int_new:N \g__tag_MCID_tmp_bypage_int
```

(*End of definition for* \g__tag_MCID_tmp_bypage_int.)

\g__tag_in_mc_bool This booleans record if a mc is open, to test nesting.

```
17 \bool_new:N \g__tag_in_mc_bool
```

(*End of definition for* \g__tag_in_mc_bool.)

\g__tag_mc_parenttree_prop	For every chunk we need to know the structure it is in, to record this in the parent tree. We store this in a property.

key: absolute number of the mc (tagmcabs)
value: the structure number the mc is in

```
18 \__tag_prop_new:N \g__tag_mc_parenttree_prop
```

(*End of definition for* \g__tag_mc_parenttree_prop.)

\g__tag_mc_parenttree_prop	Some commands (e.g. links) want to close a previous mc and reopen it after they did their work. For this we create a stack:

```
19 \seq_new:N \g__tag_mc_stack_seq
```

(*End of definition for* \g__tag_mc_parenttree_prop.)

\l__tag_mc_artifact_type_tl	Artifacts can have various types like Pagination or Layout. This stored in this variable.

```
20 \tl_new:N \l__tag_mc_artifact_type_tl
```

(*End of definition for* \l__tag_mc_artifact_type_tl.)

\l__tag_mc_key_stash_bool	This booleans store the stash and artifact status of the mc-chunk.
\l__tag_mc_artifact_bool	

```
21 \bool_new:N \l__tag_mc_key_stash_bool
22 \bool_new:N \l__tag_mc_artifact_bool
```

(*End of definition for* \l__tag_mc_key_stash_bool *and* \l__tag_mc_artifact_bool.)

\l__tag_mc_key_tag_tl	Variables used by the keys. \l_@@_mc_key_properties_tl will collect a number of
\g__tag_mc_key_tag_tl	values. TODO: should this be a pdfdict now?
\l__tag_mc_key_label_tl	
\l__tag_mc_key_properties_tl	

```
23 \tl_new:N \l__tag_mc_key_tag_tl
24 \tl_new:N \g__tag_mc_key_tag_tl
25 \tl_new:N \l__tag_mc_key_label_tl
26 \tl_new:N \l__tag_mc_key_properties_tl
```

(*End of definition for* \l__tag_mc_key_tag_tl *and others.*)

3.2 Functions

__tag_mc_handle_mc_label:n	The commands labels a mc-chunk. It is used if the user explicitly labels the mc-chunk with the label key. The argument is the value provided by the user. It stores the attributes

tagabspage: the absolute page, \g_shipout_readonly_int,
tagmcabs: the absolute mc-counter \c@g_@@_MCID_abs_int,
tagmcid: the ID of the chunk on the page \g_@@_MCID_tmp_bypage_int, this typically settles down after a second compilation. The reference command is defined in tagpdf.dtx and is based on l3ref.

```
27 \cs_new:Nn \__tag_mc_handle_mc_label:n
28   {
29     \__tag_ref_label:en{tagpdf-#1}{mc}
30   }
```

(*End of definition for* __tag_mc_handle_mc_label:n.)

__tag_mc_set_label_used:n   Unlike with structures we can't check if a labeled mc has been used by looking at the P key, so we use a dedicated csname for the test

```
31 \cs_new_protected:Npn \__tag_mc_set_label_used:n #1 %#1 labelname
32   {
33     \tl_new:c { g__tag_mc_label_\tl_to_str:n{#1}_used_tl }
34   }
35 ⟨/shared⟩
```

(*End of definition for* __tag_mc_set_label_used:n.)

\tag_mc_use:n   These command allow to record a marked content that was stashed away before into the current structure. A marked content can be used only once – the command will issue a warning if an mc is use a second time. The argument is a label name set with the `label` key.

     TODO: is testing for struct the right test?

```
36 ⟨base⟩\cs_new_protected:Npn \tag_mc_use:n #1 { \__tag_whatsits: }
37 ⟨*shared⟩
38 \cs_set_protected:Npn \tag_mc_use:n #1 %#1: label name
39   {
40     \__tag_check_if_active_struct:T
41       {
42         \tl_set:Nx  \l__tag_tmpa_tl { \__tag_ref_value:nnn{tagpdf-#1}{tagmcabs}{} }
43         \tl_if_empty:NTF\l__tag_tmpa_tl
44           {
45             \msg_warning:nnn {tag} {mc-label-unknown} {#1}
46           }
47           {
48             \cs_if_free:cTF { g__tag_mc_label_\tl_to_str:n{#1}_used_tl }
49               {
50                 \__tag_mc_handle_stash:x { \l__tag_tmpa_tl }
51                 \__tag_mc_set_label_used:n {#1}
52               }
53               {
54                 \msg_warning:nnn {tag}{mc-used-twice}{#1}
55               }
56           }
57       }
58   }
59 ⟨/shared⟩
```

(*End of definition for* \tag_mc_use:n. *This function is documented on page 60.*)

\tag_mc_artifact_group_begin:n
\tag_mc_artifact_group_end: This opens an artifact of the type given in the argument, and then stops all tagging. It creates a group. It pushes and pops mc-chunks at the begin and end.

```
60 ⟨base⟩\cs_new_protected:Npn \tag_mc_artifact_group_begin:n #1 {}
61 ⟨base⟩\cs_new_protected:Npn \tag_mc_artifact_group_end:{}
62 ⟨*shared⟩
63 \cs_set_protected:Npn \tag_mc_artifact_group_begin:n #1
64   {
65   \tag_mc_end_push:
66   \tag_mc_begin:n {artifact=#1}
67   \tag_stop_group_begin:
68   }
69
```

```
70  \cs_set_protected:Npn \tag_mc_artifact_group_end:
71  {
72    \tag_stop_group_end:
73    \tag_mc_end:
74    \tag_mc_begin_pop:n{}
75  }
76  ⟨/shared⟩
```

(*End of definition for* \tag_mc_artifact_group_begin:n *and* \tag_mc_artifact_group_end:. *These functions are documented on page 60.*)

\tag_mc_reset_box:N This allows to reset the mc-attributes in box. On base and generic mode it should do nothing.

```
77  ⟨base⟩\cs_new_protected:Npn \tag_mc_reset_box:N #1 {}
```

(*End of definition for* \tag_mc_reset_box:N. *This function is documented on page 61.*)

\tag_mc_end_push:
\tag_mc_begin_pop:n

```
78  ⟨base⟩\cs_new_protected:Npn \tag_mc_end_push: {}
79  ⟨base⟩\cs_new_protected:Npn \tag_mc_begin_pop:n #1 {}
80  ⟨*shared⟩
81  \cs_set_protected:Npn \tag_mc_end_push:
82    {
83      \__tag_check_if_active_mc:T
84        {
85          \__tag_mc_if_in:TF
86            {
87              \seq_gpush:Nx \g__tag_mc_stack_seq { \tag_get:n {mc_tag} }
88              \__tag_check_mc_pushed_popped:nn
89                { pushed }
90                { \tag_get:n {mc_tag} }
91              \tag_mc_end:
92            }
93            {
94              \seq_gpush:Nn \g__tag_mc_stack_seq {-1}
95              \__tag_check_mc_pushed_popped:nn { pushed }{-1}
96            }
97        }
98    }
99
100 \cs_set_protected:Npn \tag_mc_begin_pop:n #1
101   {
102     \__tag_check_if_active_mc:T
103       {
104         \seq_gpop:NNTF \g__tag_mc_stack_seq \l__tag_tmpa_tl
105           {
106             \tl_if_eq:NnTF \l__tag_tmpa_tl {-1}
107               {
108                 \__tag_check_mc_pushed_popped:nn {popped}{-1}
109               }
110               {
111                 \__tag_check_mc_pushed_popped:nn {popped}{\l__tag_tmpa_tl}
112                 \tag_mc_begin:n {tag=\l__tag_tmpa_tl,#1}
113               }
114           }
```

```
115            {
116                \__tag_check_mc_pushed_popped:nn {popped}{empty~stack,~nothing}
117            }
118        }
119    }
```

(*End of definition for* \tag_mc_end_push: *and* \tag_mc_begin_pop:n. *These functions are documented on page 60.*)

3.3 Keys

This are the keys where the code can be shared between the modes.

stash␣(mc-key) the two internal artifact keys are use to define the public **artifact**. For now we add
__artifact-bool support for the subtypes Header and Footer. Watermark,PageNum, LineNum,Redac-
__artifact-type tion,Bates will be added if some use case emerges. If some use case for /BBox and
/Attached emerges, it will be perhaps necessary to adapt the code.

```
120 \keys_define:nn { __tag / mc }
121    {
122      stash                     .bool_set:N    = \l__tag_mc_key_stash_bool,
123      __artifact-bool           .bool_set:N    = \l__tag_mc_artifact_bool,
124      __artifact-type           .choice:,
125      __artifact-type / pagination .code:n    =
126        {
127          \tl_set:Nn \l__tag_mc_artifact_type_tl { Pagination }
128        },
129      __artifact-type / pagination/header .code:n    =
130        {
131          \tl_set:Nn \l__tag_mc_artifact_type_tl { Pagination/Subtype/Header }
132        },
133      __artifact-type / pagination/footer .code:n    =
134        {
135          \tl_set:Nn \l__tag_mc_artifact_type_tl { Pagination/Subtype/Footer }
136        },
137      __artifact-type / layout      .code:n    =
138        {
139          \tl_set:Nn \l__tag_mc_artifact_type_tl { Layout }
140        },
141      __artifact-type / page        .code:n    =
142        {
143          \tl_set:Nn \l__tag_mc_artifact_type_tl { Page }
144        },
145      __artifact-type / background .code:n    =
146        {
147          \tl_set:Nn \l__tag_mc_artifact_type_tl { Background }
148        },
149      __artifact-type / notype      .code:n    =
150        {
151          \tl_set:Nn \l__tag_mc_artifact_type_tl {}
152        },
153      __artifact-type /        .code:n    =
154        {
155          \tl_set:Nn \l__tag_mc_artifact_type_tl {}

9 ⟨/debug⟩

1.1   Variables

\g__tag_MCID_byabspage_prop   This property will hold the current maximum on a page it will contain key-value of type $\langle abspagenum \rangle = \langle max\ mcid \rangle$

10 ⟨∗generic⟩
11 __tag_prop_new:N \g__tag_MCID_byabspage_prop

(*End of definition for* \g__tag_MCID_byabspage_prop.)

\l__tag_mc_ref_abspage_tl   We need a ref-label system to ensure that the MCID cnt restarts at 0 on a new page This will be used to store the tagabspage attribute retrieved from a label.

12 \tl_new:N \l__tag_mc_ref_abspage_tl

(*End of definition for* \l__tag_mc_ref_abspage_tl.)

\l__tag_mc_tmpa_tl   temporary variable

13 \tl_new:N \l__tag_mc_tmpa_tl

(*End of definition for* \l__tag_mc_tmpa_tl.)

\g__tag_mc_marks   a marks register to keep track of the mc's at page breaks and a sequence to keep track of the data for the continuation extra-tmb. We probably will need to track mc-marks in more than one stream, so the seq contains the name of the stream.

14 \newmarks \g__tag_mc_marks

(*End of definition for* \g__tag_mc_marks.)

`\g__tag_mc_main_marks_seq`
`\g__tag_mc_footnote_marks_seq`
`\g__tag_mc_multicol_marks_seq`

Each stream has an associated global seq variable holding the bottom marks from the/a previous chunk in the stream. We provide three by default: main, footnote and multicol. TODO: perhaps an interface for more streams will be needed.

```
15 \seq_new:N \g__tag_mc_main_marks_seq
16 \seq_new:N \g__tag_mc_footnote_marks_seq
17 \seq_new:N \g__tag_mc_multicol_marks_seq
```

(*End of definition for* `\g__tag_mc_main_marks_seq`, `\g__tag_mc_footnote_marks_seq`, *and* `\g__tag_-mc_multicol_marks_seq`.)

`\l__tag_mc_firstmarks_seq`
`\l__tag_mc_botmarks_seq`

The marks content contains a number of data which we will have to access and compare, so we will store it locally in two sequences. topmarks is unusable in LaTeX so we ignore it.

```
18 \seq_new:N  \l__tag_mc_firstmarks_seq
19 \seq_new:N  \l__tag_mc_botmarks_seq
```

(*End of definition for* `\l__tag_mc_firstmarks_seq` *and* `\l__tag_mc_botmarks_seq`.)

1.2 Functions

`\__tag_mc_begin_marks:nn`
`\__tag_mc_artifact_begin_marks:n`
`\__tag_mc_end_marks:`

Generic mode need to set marks for the page break and split stream handling. We always set two marks to be able to detect the case when no mark is on a page/galley. MC-begin commands will set (b,-,data) and (b,+,data), MC-end commands will set (e,-,data) and (e,+,data).

```

```

(*End of definition for* `\__tag_mc_store:nnn`*.*)

`\__tag_mc_insert_extra_tmb:n`
`\__tag_mc_insert_extra_tme:n` These two functions should be used in the output routine at the place where a mc-literal could be missing due to a page break or some other split. They check (with the help of the marks) if a extra-tmb or extra-tme is needed. The tmb command stores also the mc into the structure, the tme has to store the data for a following extra-tmb. The argument takes a stream name like main or footnote to allow different handling there. The content of the marks must be stored before (with `\@@_mc_get_marks:` or manually) into `\l_@@_mc_firstmarks_seq` and `\l_@@_mc_botmarks_seq` so that the tests can use them.

```
105 \cs_new_protected:Npn \__tag_mc_insert_extra_tmb:n #1 % #1 stream: e.g. main or footnote
106   {

```

(*End of definition for* `\__tag_mc_insert_extra_tmb:n` *and* `\__tag_mc_insert_extra_tme:n`.)

1.3 Looking at MC marks in boxes

`\__tag_add_missing_mcs:Nn` Assumptions:

- test for tagging active outside;

- mark retrieval also outside.

This takes a box register as its first argument (or the register number in a count register, as used by multicol). It adds an extra tmb at the top of the box if necessary and similarly an extra tme at the end. This is done by adding hboxes in a way that the positioning and the baseline of the given box is not altered. The result is written back to the box.

The second argument is the stream this box belongs to und is currently either `main` for the main galley, `footnote` for footnote note text, or `multicol` for boxes produced for columns in that environment. Other streams may follow over time.

```
164 \cs_new_protected:Npn\__tag_add_missing_mcs:Nn #1 #2 {
165   \vbadness \@M
166   \vfuzz    \c_max_dim
167   \vbox_set_to_ht:Nnn #1 { \box_ht:N #1 } {
168     \hbox_set:Nn \l__tag_tmpa_box { \__tag_mc_insert_extra_tmb:n {#2} }
169     \hbox_set:Nn \l__tag_tmpb_box { \__tag_mc_insert_extra_tme:n {#2} }
170     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
171         {
172           \seq_log:c { g__tag_mc_#2_marks_seq}
173         }
```

The box placed on the top gets zero size and thus will not affect the box dimensions of the box we are modifying.

```
174     \box_set_ht:Nn \l__tag_tmpa_box \c_zero_dim
175     \box_set_dp:Nn \l__tag_tmpa_box \c_zero_dim
```

The box added at the bottom will get the depth of the original box. This way we can arrange that from the outside everything looks as before.

```
176     \box_set_ht:Nn \l__tag_tmpb_box \c_zero_dim
177     \box_set_dp:Nn \l__tag_tmpb_box { \box_dp:N #1 }
```

We need to set `\boxmaxdepth` in case the original box has an unusually large depth, otherwise that depth is not preserved when we string things together.

```
178     \boxmaxdepth \@maxdepth
179     \box_use_drop:N        \l__tag_tmpa_box
180     \vbox_unpack_drop:N    #1
```

Back up by the depth of the box as we add that later again.

```
181     \tex_kern:D -\box_dp:N \l__tag_tmpb_box
```

And we don't want any glue added when we add the box.

```
182     \nointerlineskip
183     \box_use_drop:N \l__tag_tmpb_box
184   }
185 }
```

(*End of definition for* `\__tag_add_missing_mcs:Nn`.)

`\__tag_add_missing_mcs_to_stream:Nn` This is the main command to add mc to the stream. It is therefor guarded by the mc-boolean.

If we aren't in the main stream then processing is a bit more complicated because to get at the marks in the box we need to artifically split it and then look at the split marks.

First argument is the box to update and the second is the "stream". In lua mode the command is a no-op.

```
186 \cs_new_protected:Npn \__tag_add_missing_mcs_to_stream:Nn #1#2
187   {
188     \__tag_check_if_active_mc:T {
```

First set up a temp box for trial splitting.

```
189     \vbadness\maxdimen
190     \box_set_eq:NN \l__tag_tmpa_box #1
```

73

Split the box to the largest size available. This should give us all content (but to be sure that there is no issue we could test out test box is empty now (not done).

```
191        \vbox_set_split_to_ht:NNn \l__tag_tmpa_box \l__tag_tmpa_box \c_max_dim
```

As a side effect of this split we should now have the first and bottom split marks set up. We use this to set up `\l__tag_mc_firstmarks_seq`

```
192        \exp_args:NNx
193        \seq_set_from_clist:Nn \l__tag_mc_firstmarks_seq
194          { \tex_splitfirstmarks:D \g__tag_mc_marks }
```

Some debugging info:

```
195 %      \iow_term:n { First~ mark~ from~ this~ box: }
196 %      \seq_log:N \l__tag_mc_firstmarks_seq
```

If this mark was empty then clearly the bottom mark will too be empty. Thus in this case we make use of the saved bot mark from the previous chunk. Note that if this is the first chunk in the stream the global seq would contain a random value, but then we can't end in this branch because the basis assumption is that streams are properly marked up so the first chunk would always have a mark at the beginning!

```
197        \seq_if_empty:NTF \l__tag_mc_firstmarks_seq
198          {
199            \__tag_check_typeout_v:n
200              {
201                No~ marks~ so~ use~ saved~ bot~ mark:~
202                \seq_use:cn {g__tag_mc_#2_marks_seq} {,~} \iow_newline:
203              }
204            \seq_set_eq:Nc \l__tag_mc_firstmarks_seq {g__tag_mc_#2_marks_seq}
```

We also update the bot mark to the same value so that we can later apply `\__tag_add_-missing_mcs:Nn` with the data structures in place (see assumptions made there).

```
205            \seq_set_eq:NN \l__tag_mc_botmarks_seq \l__tag_mc_firstmarks_seq
206          }
```

If there was a first mark then there is also a bot mark (and it can't be the same as our marks always come in pairs). So if that branch is chosen we update `\l__tag_mc_-botmarks_seq` from the bot mark.

```
207          {
208            \__tag_check_typeout_v:n
209              {
210                Pick~ up~ new~ bot~ mark!
211              }
212            \exp_args:NNx
213            \seq_set_from_clist:Nn \l__tag_mc_botmarks_seq
214              { \tex_splitbotmarks:D   \g__tag_mc_marks }
215          }
```

Finally we call `\__tag_add_missing_mcs:Nn` to add any missing tmb/tme as needed,

```
216      \__tag_add_missing_mcs:Nn #1 {#2}
217 %%
218      \seq_gset_eq:cN  {g__tag_mc_#2_marks_seq} \l__tag_mc_botmarks_seq
219 %%
220    }
221 }
```

(*End of definition for* `\__tag_add_missing_mcs_to_stream:Nn`.)

<div style="float:left">

`\__tag_mc_if_in_p:`
`\__tag_mc_if_in:`*TF*
`\tag_mc_if_in_p:`
`\tag_mc_if_in:`*TF*

</div>

This is a test if a mc is open or not. It depends simply on a global boolean: mc-chunks are added linearly so nesting should not be relevant.

One exception are header and footer (perhaps they are more, but for now it doesn't seem so, so there are no dedicated code to handle this situation): When they are built and added to the page we could be both inside or outside a mc-chunk. But header and footer should ignore this and not push/pop or warn about nested mc. It is therefore important there to set and reset the boolean manually. See the tagpddocu-patches.sty for an example.

```
222 \prg_new_conditional:Nnn \__tag_mc_if_in: {p,T,F,TF}
223   {
224     \bool_if:NTF \g__tag_in_mc_bool
225       { \prg_return_true:  }
226       { \prg_return_false: }
227   }
228
229 \prg_new_eq_conditional:NNn \tag_mc_if_in: \__tag_mc_if_in: {p,T,F,TF}
```

`\__tag_mc_bdc:nx`

</div>

These are the low-level commands. There are now equal to the pdfmanagement commands generic mode, but we use an indirection in case luamode need something else. change 04.08.2018: the commands do not check the validity of the arguments or try to escape them, this should be done before using them.

```
230 % #1 tag, #2 properties
231 \cs_set_eq:NN \__tag_mc_bmc:n  \pdf_bmc:n
232 \cs_set_eq:NN \__tag_mc_emc:   \pdf_emc:
233 \cs_set_eq:NN \__tag_mc_bdc:nn \pdf_bdc:nn
234 \cs_generate_variant:Nn \__tag_mc_bdc:nn {nx}
```

(*End of definition for* `\__tag_mc_bmc:n` , `\__tag_mc_emc:` , *and* `\__tag_mc_bdc:nn`.)

<div style="float:left">

`\__tag_mc_bdc_mcid:nn`
`\__tag_mc_bdc_mcid:n`
`\__tag_mc_handle_mcid:nn`
`\__tag_mc_handle_mcid:VV`

</div>

This create a BDC mark with an `/MCID` key. Most of the work here is to get the current number value for the MCID: they must be numbered by page starting with 0 and then successively. The first argument is the tag, e.g. `P` or `Span`, the second is used to pass more properties. We also define a wrapper around the low-level command as luamode will need something different.

__tag_mc_handle_stash:n
__tag_mc_handle_stash:x

This is the handler which puts a mc into the the current structure. The argument is the number of the mc. Beside storing the mc into the structure, it also has to record the structure for the parent tree. The name is a bit confusing, it does *not* handle mc with the stash key . . . . TODO: why does luamode use it for begin + use, but generic mode only for begin?

```
289  \cs_new_protected:Npn \__tag_mc_handle_stash:n #1 %1 mcidnum
290    {
291      \__tag_check_mc_used:n {#1}

294        {#1}
295      \prop_gput:Nxx \g__tag_mc_parenttree_prop
296        {#1}
```

76

```
297        { \g__tag_struct_stack_current_tl }
298     }
299 \cs_generate_variant:Nn \__tag_mc_handle_stash:n { x }
```

(*End of definition for* __tag_mc_handle_stash:n.)

__tag_mc_bmc_artifact:
__tag_mc_bmc_artifact:n
__tag_mc_handle_artifact:N

Two commands to create artifacts, one without type, and one with. We define also a wrapper handler as luamode will need a different definition. TODO: perhaps later: more properties for artifacts

```
300 \cs_new_protected:Npn  \__tag_mc_bmc_artifact:
301   {
302     \__tag_mc_bmc:n {Artifact}
303   }
304 \cs_new_protected:Npn \__tag_mc_bmc_artifact:n #1
305   {
306     \__tag_mc_bdc:nn {Artifact}{/Type/#1}
307   }
308 \cs_new_protected:Npn \__tag_mc_handle_artifact:N #1
309    % #1 is a var containing the artifact type
310   {
311     \int_gincr:N \c@g__tag_MCID_abs_int
312     \tl_if_empty:NTF #1
313       { \__tag_mc_bmc_artifact: }
314       { \exp_args:NV\__tag_mc_bmc_artifact:n #1 }
315   }
```

(*End of definition for* __tag_mc_bmc_artifact: , __tag_mc_bmc_artifact:n, *and* __tag_mc_handle_-
artifact:N.)

__tag_get_data_mc_tag: This allows to retrieve the active mc-tag. It is use by the get command.

```
316 \cs_new:Nn \__tag_get_data_mc_tag: { \g__tag_mc_key_tag_tl }
317 ⟨/generic⟩
```

(*End of definition for* __tag_get_data_mc_tag:.)

\tag_mc_begin:n
\tag_mc_end:

These are the core public commands to open and close an mc. They don't need to be in the same group or grouping level, but the code expect that they are issued linearly. The tag and the state is passed to the end command through a global var and a global boolean.

```
318 ⟨base⟩\cs_new_protected:Npn \tag_mc_begin:n #1 { \__tag_whatsits: \int_gincr:N \c@g__tag_MCID_a

```

(End of definition for tag *(mc-key) and others. These functions are documented on page [61].)*

Part VI
The **tagpdf-mc-luacode** module Code related to Marked Content (mc-chunks), luamode-specific Part of the tagpdf package

The code is splitted into three parts: code shared by all engines, code specific to luamode and code not used by luamode.

1 Marked content code − luamode code

luamode uses attributes to mark mc-chunks. The two attributes used are defined in the backend file. The backend also load the lua file, as it can contain functions needed elsewhere. The attributes for mc are global (between 0.6 and 0.81 they were local but this was reverted). The attributes are setup only in lua, and one should use the lua functions to set and get them.

`g_@@_mc_type_attr`: the value represent the type

`g_@@_mc_cnt_attr`: will hold the `\c@g_@@_MCID_abs_int` value

Handling attribute needs a different system to number the page wise mcid's: a `\tagmcbegin` ... `\tagmcend` pair no longer surrounds exactly one mc chunk: it can be split at page breaks. We know the included mcid(s) only after the ship out. So for the `struct -> mcid` mapping we need to record `struct -> mc-cnt` (in `\g_@@_mc_parenttree_prop` and/or a lua table and at shipout `mc-cnt-> {mcid, mcid, ...}` and when building the trees connect both.

Key definitions are overwritten for luatex to store that data in lua-tables. The data for the mc are in `ltx.@@.mc[absnum]`. The fields of the table are:

tag : the type (a string)

raw : more properties (string)

label: a string.

artifact: the presence indicates an artifact, the value (string) is the type.

kids: a array of tables

`{1={kid=num2,page=pagenum1}, 2={kid=num2,page=pagenum2},...}`,

this describes the chunks the mc has been split to by the traversing code

parent: the number of the structure it is in. Needed to build the parent tree.

```
1  ⟨@@=tag⟩
2  ⟨*luamode⟩
3  \ProvidesExplPackage {tagpdf-mc-code-lua} {2023-08-04} {0.98k}
4    {tagpdf - mc code only for the luamode }
5  ⟨/luamode⟩
```

The main function which wanders through the shipout box to inject the literals. if the new callback is there, it is used.

1.1 Commands

__tag_add_missing_mcs_to_stream:Nn

This command is used in the output routine by the ptagging code. It should do nothing in luamode.

```
61 \cs_new_protected:Npn \__tag_add_missing_mcs_to_stream:Nn #1#2 {}
```

(*End of definition for* __tag_add_missing_mcs_to_stream:Nn.)

__tag_mc_if_in_p:
__tag_mc_if_in:*TF*
\tag_mc_if_in_p:
\tag_mc_if_in:*TF*

This tests, if we are in an mc, for attributes this means to check against a number.

```
62 \prg_new_conditional:Nnn \__tag_mc_if_in: {p,T,F,TF}
63   {
64     \int_compare:nNnTF
65       { -2147483647 }
66       =
67       {\lua_now:e
68         {
69           tex.print(\int_use:N \c_document_cctab,tex.getattribute(luatexbase.attributes.g__ta
70         }
71       }
72       { \prg_return_false:  }
73       { \prg_return_true: }
74   }
75
76 \prg_new_eq_conditional:NNn \tag_mc_if_in: \__tag_mc_if_in: {p,T,F,TF}
```

(*End of definition for* __tag_mc_if_in:TF *and* \tag_mc_if_in:TF*. This function is documented on page 60.*)

__tag_mc_lua_set_mc_type_attr:n
__tag_mc_lua_set_mc_type_attr:o
__tag_mc_lua_unset_mc_type_attr:

This takes a tag name, and sets the attributes globally to the related number.

```
77 \cs_new:Nn \__tag_mc_lua_set_mc_type_attr:n % #1 is a tag name
78   {
79     %TODO ltx.__tag.func.get_num_from("#1") seems not to return a suitable number??

117            (
118              "global",
119              luatexbase.attributes.g__tag_mc_cnt_attr,
120              -2147483647
121            )
122        }
123    }
124
```

(*End of definition for* __tag_mc_lua_set_mc_type_attr:n *and* __tag_mc_lua_unset_mc_type_attr:.)

__tag_mc_insert_mcid_kids:n   These commands will in the finish code replace the dummy for a mc by the real mcid
__tag_mc_insert_mcid_single_kids:n   kids we need a variant for the case that it is the only kid, to get the array right

```
125  \cs_new:Nn \__tag_mc_insert_mcid_kids:n
126    {
127      \lua_now:e { ltx.__tag.func.mc_insert_kids (#1,0) }
128    }
129
130  \cs_new:Nn \__tag_mc_insert_mcid_single_kids:n
131    {
132      \lua_now:e {ltx.__tag.func.mc_insert_kids (#1,1) }
133    }
```

(*End of definition for* __tag_mc_insert_mcid_kids:n *and* __tag_mc_insert_mcid_single_kids:n.)

__tag_mc_handle_stash:n   This is the lua variant for the command to put an mcid absolute number in the current
__tag_mc_handle_stash:x   structure.

```
134  \cs_new:Nn \__tag_mc_handle_stash:n %1 mcidnum
135    {
136      \__tag_check_mc_used:n { #1 }
137      \seq_gput_right:cn % Don't fill a lua table due to the command in the item,
138                         % so use the kernel command
139        { g__tag_struct_kids_\g__tag_struct_stack_current_tl _seq }
140        {
141          \__tag_mc_insert_mcid_kids:n {#1}%
142        }
143      \lua_now:e
144        {
145          ltx.__tag.func.store_struct_mcabs
146            (
```

84

```
147                 \g__tag_struct_stack_current_tl,#1
148             )
149         }
150     \prop_gput:Nxx
151         \g__tag_mc_parenttree_prop
152         { #1 }
153         { \g__tag_struct_stack_current_tl }
154   }
155
156 \cs_generate_variant:Nn \__tag_mc_handle_stash:n { x }
```

(*End of definition for* `\__tag_mc_handle_stash:n`.)

`\tag_mc_begin:n` This is the lua version of the user command. We currently don't check if there is nesting as it doesn't matter so much in lua.

```
157 \cs_set_protected:Nn \tag_mc_begin:n
158   {
159     \__tag_check_if_active_mc:T
160       {
161         \group_begin:
162         %\__tag_check_mc_if_nested:
163         \bool_gset_true:N \g__tag_in_mc_bool
164         \bool_set_false:N\l__tag_mc_artifact_bool
165         \tl_clear:N \l__tag_mc_key_properties_tl
166         \int_gincr:N \c@g__tag_MCID_abs_int
```

set the default tag to the structure:

```
167         \tl_set_eq:NN \l__tag_mc_key_tag_tl \g__tag_struct_tag_tl
168         \tl_gset_eq:NN\g__tag_mc_key_tag_tl \g__tag_struct_tag_tl

327            \keys_set:nn
328              { __tag / mc}
329              { __artifact-bool, __artifact-type=#1, tag=Artifact }
330          \exp_args:Nnx
331            \keys_set:nn
332              { __tag / mc }
333              { __artifact-store=\l__tag_mc_artifact_type_tl }
334        },
335      artifact .default:n    = { notype }
336    }
337
```

338 ⟨/luamode⟩

(*End of definition for* `tag` `(mc-key)` *and others. These functions are documented on page* *.*)

Part VII

The **tagpdf-struct** module
Commands to create the structure
Part of the tagpdf package

1 Public Commands

`\tag_struct_begin:n`
`\tag_struct_end:`
`\tag_struct_end:n`

`\tag_struct_begin:n{`⟨*key-values*⟩`}`
`\tag_struct_end:`
`\tag_struct_end:n{`⟨*tag*⟩`}`

These commands start and end a new structure. They don't start a group. They set all their values globally. `\tag_struct_end:n` does nothing special normally (apart from swallowing its argument, but if `tagpdf-debug` is loaded, it will check if the {⟨*tag*⟩} (after expansion) is identical to the current structure on the stack. The tag is not role mapped!

`\tag_struct_use:n`

`\tag_struct_use:n{`⟨*label*⟩`}`

These commands insert a structure previously stashed away as kid into the currently active structure. A structure should be used only once, if the structure already has a parent a warning is issued.

`\tag_struct_object_ref:n`
`\tag_struct_object_ref:e`

`\tag_struct_object_ref:n{`⟨*struct number*⟩`}`

This is a small wrapper around `\pdf_object_ref:n` to retrieve the object reference of the structure with the number ⟨*struct number*⟩. This number can be retrieved and stored for the current structure for example with `\tag_get:n{`⟨*struct$_n$um*⟩`}`. Be aware that it can only be used if the structure has already been created and that it doesn't check if the object actually exists!

The following two functions are used to add annotations. They must be used together and with care to get the same numbers. Perhaps some improvements are needed here.

`\tag_struct_insert_annot:nn` `\tag_struct_insert_annot:nn{`⟨*object reference*⟩`}{`⟨*struct parent number*⟩`}`

This inserts an annotation in the structure. ⟨*object reference*⟩ is there reference to the annotation. ⟨*struct parent number*⟩ should be the same number as had been inserted with `\tag_struct_parent_int:` as `StructParent` value to the dictionary of the annotion. The command will increase the value of the counter used by `\tag_struct_parent_int:`.

`\tag_struct_parent_int:` `\tag_struct_parent_int:`

This gives back the next free /StructParent number (assuming that it is together with `\tag_struct_insert_annot:nn` which will increase the number.

2 Public keys

2.1 Keys for the structure commands

tag␣(struct-key)
This is required. The value of the key is normally one of the standard types listed in the main tagpdf documentation. It is possible to setup new tags/types. The value can also be of the form `type/NS`, where `NS` is the shorthand of a declared name space. Currently the names spaces `pdf`, `pdf2`, `mathml` and `user` are defined. This allows to use a different name space than the one connected by default to the tag. But normally this should not be needed.

stash␣(struct-key)
Normally a new structure inserts itself as a kid into the currently active structure. This key prohibits this. The structure is nevertheless from now on "the current active structure" and parent for following marked content and structures.

label␣(struct-key)
This key sets a label by which one can refer to the structure. It is e.g. used by `\tag_-struct_use:n` (where a real label is actually not needed as you can only use structures already defined), and by the `ref` key (which can refer to future structures). Internally the label name will start with `tagpdfstruct-` and it stores the two attributs `tagstruct` (the structure number) and `tagstructobj` (the object reference).

parent␣(struct-key)
By default a structure is added as kid to the currently active structure. With the parent key one can choose another parent. The value is a structure number which must refer to an already existing, previously created structure. Such a structure number can for example be have been stored with `\tag_get:n`, but one can also use a label on the parent structure and then use `\ref_value:nn{tagpdfstruct-label}{tagstruct}` to retrieve it.

title␣(struct-key)
title-o␣(struct-key)
This keys allows to set the dictionary entry `/Title` in the structure object. The value is handled as verbatim string and hex encoded. Commands are not expanded. `title-o` will expand the value once.

alt␣(struct-key)
This key inserts an `/Alt` value in the dictionary of structure object. The value is handled as verbatim string and hex encoded. The value will be expanded first once. If it is empty, nothing will happen.

actualtext␣(struct-key)
This key inserts an `/ActualText` value in the dictionary of structure object. The value is handled as verbatim string and hex encoded. The value will be expanded first once. If it is empty, nothing will happen.

lang␣(struct-key)
This key allows to set the language for a structure element. The value should be a bcp-identifier, e.g. `de-De`.

ref␣(struct-key) This key allows to add references to other structure elements, it adds the `/Ref` array to the structure. The value should be a comma separated list of structure labels set with the `label` key. e.g. `ref={label1,label2}`.

E␣(struct-key) This key sets the `/E` key, the expanded form of an abbreviation or an acronym (I couldn't think of a better name, so I sticked to E).

AF␣(struct-key)
AFinline␣(struct-key)
AFinline-o␣(struct-key)

```
AF = ⟨object name⟩
AF-inline = ⟨text content⟩
```
These keys allows to reference an associated file in the structure element. The value ⟨*object name*⟩ should be the name of an object pointing to the `/Filespec` dictionary as expected by `\pdf_object_ref:n` from a current `l3kernel`.

The value `AF-inline` is some text, which is embedded in the PDF as a text file with mime type text/plain. `AF-inline-o` is like `AF-inline` but expands the value once.

Future versions will perhaps extend this to more mime types, but it is still a research task to find out what is really needed.

`AF` can be used more than once, to associate more than one file. The inline keys can be used only once per structure. Additional calls are ignored.

attribute␣(struct-key) This key takes as argument a comma list of attribute names (use braces to protect the commas from the external key-val parser) and allows to add one or more attribute dictionary entries in the structure object. As an example

$$\texttt{\textbackslash tagstructbegin\{tag=TH,attribute= TH-row\}}$$

Attribute names and their content must be declared first in `\tagpdfsetup`.

attribute-class␣(struct-key)

This key takes as argument a comma list of attribute class names (use braces to protect the commas from the external key-val parser) and allows to add one or more attribute classes to the structure object.

Attribute class names and their content must be declared first in `\tagpdfsetup`.

2.2 Setup keys

newattribute␣(setup-key)   `newattribute = {⟨name⟩}{⟨Content⟩}`

This key can be used in the setup command `\tagpdfsetup` and allow to declare a new attribute, which can be used as attribute or attribute class. The value are two brace groups, the first contains the name, the second the content.

```
\tagpdfsetup
 {
  newattribute =
   {TH-col}{/O /Table /Scope /Column},
  newattribute =
   {TH-row}{/O /Table /Scope /Row},
  }
```

root-AF␣(setup-key)   `root-AF = ⟨object name⟩`

This key can be used in the setup command `\tagpdfsetup` and allows to add associated files to the root structure. Like `AF` it can be used more than once to add more than one file.

```
1 ⟨@@=tag⟩
2 ⟨*header⟩
3 \ProvidesExplPackage {tagpdf-struct-code} {2023-08-04} {0.98k}
4  {part of tagpdf - code related to storing structure}
5 ⟨/header⟩
```

3 Variables

\c@g__tag_struct_abs_int   Every structure will have a unique, absolute number. I will use a latex counter for the structure count to have a chance to avoid double structures in align etc.

```
6 ⟨base⟩\newcounter  { g__tag_struct_abs_int }
7 ⟨base⟩\int_gzero:N \c@g__tag_struct_abs_int
```

(*End of definition for* \c@g__tag_struct_abs_int.)

\g__tag_struct_objR_seq   a sequence to store mapping between the structure number and the object number. We assume that structure numbers are assign consecutively and so the index of the seq can be used. A seq allows easy mapping over the structures.

```
8 ⟨*package⟩
9 \__tag_seq_new:N  \g__tag_struct_objR_seq
```

(*End of definition for* \g__tag_struct_objR_seq.)

\g__tag_struct_cont_mc_prop   in generic mode it can happen after a page break that we have to inject into a structure sequence an additional mc after. We will store this additional info in a property. The key is the absolut mc num, the value the pdf directory.

```
10 \__tag_prop_new:N  \g__tag_struct_cont_mc_prop
```

(*End of definition for* \g__tag_struct_cont_mc_prop.)

\g__tag_struct_stack_seq A stack sequence for the structure stack. When a sequence is opened it's number is put on the stack.

```
11 \seq_new:N     \g__tag_struct_stack_seq
12 \seq_gpush:Nn \g__tag_struct_stack_seq {0}
```

(*End of definition for* \g__tag_struct_stack_seq.)

\g__tag_struct_tag_stack_seq We will perhaps also need the tags. While it is possible to get them from the numbered stack, lets build a tag stack too.

```
13 \seq_new:N     \g__tag_struct_tag_stack_seq
14 \seq_gpush:Nn \g__tag_struct_tag_stack_seq {{Root}{StructTreeRoot}}
```

(*End of definition for* \g__tag_struct_tag_stack_seq.)

\g_tag_struct_stack_current_tl The global variable will hold the current structure number. It is already defined in
\l__tag_struct_stack_parent_tmpa_tl `tagpdf-base`. The local temporary variable will hold the parent when we fetch it from the stack.

```
15 ⟨/package⟩
16 ⟨base⟩\tl_new:N  \g__tag_struct_stack_current_tl
17 ⟨base⟩\tl_gset:Nn \g__tag_struct_stack_current_tl {\int_use:N\c@g__tag_struct_abs_int}
18 ⟨*package⟩
19 \tl_new:N       \l__tag_struct_stack_parent_tmpa_tl
```

(*End of definition for* \g_tag_struct_stack_current_tl *and* \l__tag_struct_stack_parent_tmpa_tl.)

I will need at least one structure: the StructTreeRoot normally it should have only one kid, e.g. the document element.

The data of the StructTreeRoot and the StructElem are in properties: \g_@@_struct_0_prop for the root and \g_@@_struct_N_prop, $N \geq 1$ for the other.

This creates quite a number of properties, so perhaps we will have to do this more efficiently in the future.

All properties have at least the keys

Type StructTreeRoot or StructElem

and the keys from the two following lists (the root has a special set of properties). the values of the prop should be already escaped properly when the entries are created (title,lange,alt,E,actualtext)

\c_tag_struct_StructTreeRoot_entries_seq These seq contain the keys we support in the two object types. They are currently no
\c__tag_struct_StructElem_entries_seq longer used, but are provided as documentation and for potential future checks. They should be adapted if there are changes in the PDF format.

```
20 \seq_const_from_clist:Nn \c__tag_struct_StructTreeRoot_entries_seq
21   {%p. 857/858
22     Type,              % always /StructTreeRoot
23     K,                 % kid, dictionary or array of dictionaries
24     IDTree,            % currently unused
25     ParentTree,        % required,obj ref to the parent tree
26     ParentTreeNextKey, % optional
27     RoleMap,
28     ClassMap,
29     Namespaces,
30     AF                 %pdf 2.0
31   }
32
```

94

```
33  \seq_const_from_clist:Nn \c__tag_struct_StructElem_entries_seq
34    {%p 858 f
35     Type,              %always /StructElem
36     S,                 %tag/type
37     P,                 %parent
38     ID,                %optional
39     Ref,               %optional, pdf 2.0 Use?
40     Pg,                %obj num of starting page, optional
41     K,                 %kids
42     A,                 %attributes, probably unused
43     C,                 %class ""
44     %R,                %attribute revision number, irrelevant for us as we
45                        % don't update/change existing PDF and (probably)
46                        % deprecated in PDF 2.0
47     T,                 %title, value in () or <>
48     Lang,              %language
49     Alt,               % value in () or <>
50     E,                 % abreviation
51     ActualText,
52     AF,                %pdf 2.0, array of dict, associated files
53     NS,                %pdf 2.0, dict, namespace
54     PhoneticAlphabet,  %pdf 2.0
55     Phoneme            %pdf 2.0
56    }
```

(*End of definition for* `\c__tag_struct_StructTreeRoot_entries_seq` *and* `\c__tag_struct_StructElem_-entries_seq`.)

3.1 Variables used by the keys

`\g__tag_struct_tag_tl`
`\g__tag_struct_tag_NS_tl`
`\l__tag_struct_roletag_tl`
`\g__tag_struct_roletag_NS_tl`

Use by the tag key to store the tag and the namespace. The role tag variables will hold locally rolemapping info needed for the parent-child checks

```
57  \tl_new:N \g__tag_struct_tag_tl
58  \tl_new:N \g__tag_struct_tag_NS_tl
59  \tl_new:N \l__tag_struct_roletag_tl
60  \tl_new:N \l__tag_struct_roletag_NS_tl
```

(*End of definition for* `\g__tag_struct_tag_tl` *and others.*)

`\l__tag_struct_key_label_tl` This will hold the label value.

```
61  \tl_new:N \l__tag_struct_key_label_tl
```

(*End of definition for* `\l__tag_struct_key_label_tl`.)

`\l__tag_struct_elem_stash_bool` This will keep track of the stash status

```
62  \bool_new:N \l__tag_struct_elem_stash_bool
```

(*End of definition for* `\l__tag_struct_elem_stash_bool`.)

3.2 Variables used by tagging code of basic elements

`\g__tag_struct_dest_num_prop` This variable records for (some or all, not clear yet) destination names the related structure number to allow to reference them in a Ref. The key is the destination. It is currently used by the toc-tagging and sec-tagging code.

```
63 ⟨/package⟩
64 ⟨base⟩\prop_new:N \g__tag_struct_dest_num_prop
65 ⟨*package⟩
```

(*End of definition for* `\g__tag_struct_dest_num_prop`.)

`\g__tag_struct_ref_by_dest_prop` This variable contains structures whose Ref key should be updated at the end to point to structured related with this destination. As this is probably need in other places too, it is not only a toc-variable.

```
66 \prop_new:N \g__tag_struct_ref_by_dest_prop
```

(*End of definition for* `\g__tag_struct_ref_by_dest_prop`.)

4 Commands

The properties must be in some places handled expandably. So I need an output handler for each prop, to get expandable output see https://tex.stackexchange.com/questions/424208. There is probably room here for a more efficient implementation. TODO check if this can now be implemented with the pdfdict commands. The property contains currently non pdf keys, but e.g. object numbers are perhaps no longer needed as we have named object anyway.

`\__tag_struct_output_prop_aux:nn`
`\__tag_new_output_prop_handler:n`

```
67 \cs_new:Npn \__tag_struct_output_prop_aux:nn #1 #2 %#1 num, #2 key
68   {
69     \prop_if_in:cnT
70       { g__tag_struct_#1_prop }
71       { #2 }
72       {
73         \c_space_tl/#2~ \prop_item:cn{ g__tag_struct_#1_prop } { #2 }
74       }
75   }
76
77 \cs_new_protected:Npn \__tag_new_output_prop_handler:n #1
78   {
79     \cs_new:cn { __tag_struct_output_prop_#1:n }
80       {
81         \__tag_struct_output_prop_aux:nn {#1}{##1}
82       }
83   }
```

(*End of definition for* `\__tag_struct_output_prop_aux:nn` *and* `\__tag_new_output_prop_handler:n`.)

4.1 Initialization of the StructTreeRoot

The first structure element, the StructTreeRoot is special, so created manually. The underlying object is @@/struct/0 which is currently created in the tree code (TODO move it here). The ParentTree and RoleMap entries are added at begin document in the tree code as they refer to object which are setup in other parts of the code. This avoid timing issues.

```
84 \tl_gset:Nn \g__tag_struct_stack_current_tl {0}
```

__tag_pdf_name_e:n

```
85 \cs_new:Npn \__tag_pdf_name_e:n #1{\pdf_name_from_unicode_e:n{#1}}
```

(*End of definition for* __tag_pdf_name_e:n*.*)

g__tag_struct_0_prop
g__tag_struct_kids_0_seq

```
86 \__tag_prop_new:c { g__tag_struct_0_prop }
87 \__tag_new_output_prop_handler:n {0}
88 \__tag_seq_new:c  { g__tag_struct_kids_0_seq }
89
90 \__tag_prop_gput:cnx
91   { g__tag_struct_0_prop }
92   { Type }
93   { \pdf_name_from_unicode_e:n {StructTreeRoot} }
94
95 \__tag_prop_gput:cnx
96   { g__tag_struct_0_prop }
97   { S }
98   { \pdf_name_from_unicode_e:n {StructTreeRoot} }
99
100 \__tag_prop_gput:cnx
101   { g__tag_struct_0_prop }
102   { rolemap }
103   { {StructTreeRoot}{pdf} }
104
105 \__tag_prop_gput:cnx
106   { g__tag_struct_0_prop }
107   { parentrole }
108   { {StructTreeRoot}{pdf} }
109
```

Namespaces are pdf 2.0. If the code moves into the kernel, the setting must be probably delayed.

```
110 \pdf_version_compare:NnF < {2.0}
111   {
112     \__tag_prop_gput:cnx
113       { g__tag_struct_0_prop }
114       { Namespaces }
115       { \pdf_object_ref:n { __tag/tree/namespaces } }
116   }
```

(*End of definition for* g__tag_struct_0_prop *and* g__tag_struct_kids_0_seq*.*)

4.2 Adding the /ID key

Every structure gets automatically an ID which is currently simply calculated from the structure number.

```
117 \cs_new:Npn \__tag_struct_get_id:n #1 %#1=struct num
118   {
119     (
120     ID.
121     \prg_replicate:nn
122     { \int_abs:n{\g__tag_tree_id_pad_int - \tl_count:e { \int_to_arabic:n { #1 } }} }
123     { 0 }
124     \int_to_arabic:n { #1 }
125     )
126   }
```

(*End of definition for* __tag_struct_get_id:n.)

4.3 Filling in the tag info

This adds or updates the tag info to a structure given by a number. We need also the original data, so we store both.

```
127 \pdf_version_compare:NnTF < {2.0}
128   {
129     \cs_new_protected:Npn \__tag_struct_set_tag_info:nnn #1 #2 #3
130       %#1 structure number, #2 tag, #3 NS
131       {
132         \__tag_prop_gput:cnx
133           { g__tag_struct_#1_prop }
134           { S }
135           { \pdf_name_from_unicode_e:n {#2}  } %
136       }
137   }
138   {
139     \cs_new_protected:Npn \__tag_struct_set_tag_info:nnn #1 #2 #3
140       {
141         \__tag_prop_gput:cnx
142           { g__tag_struct_#1_prop }
143           { S }
144           { \pdf_name_from_unicode_e:n {#2} } %
145         \prop_get:NnNT \g__tag_role_NS_prop {#3} \l__tag_get_tmpc_tl
146           {
147             \__tag_prop_gput:cnx
148               { g__tag_struct_#1_prop }
149               { NS }
150               { \l__tag_get_tmpc_tl } %
151           }
152       }
153   }
154 \cs_generate_variant:Nn \__tag_struct_set_tag_info:nnn {eVV}
```

(*End of definition for* __tag_struct_set_tag_info:nnn.)

98

We also need a way to get the tag info needed for parent child check from parent structures.

```
155 \cs_new_protected:Npn \__tag_struct_get_parentrole:nNN #1 #2 #3
156   %#1 struct num, #2 tlvar for tag , #3 tlvar for NS
157     {
158       \prop_get:cnNTF
159         { g__tag_struct_#1_prop }
160         { parentrole }
161         \l__tag_get_tmpc_tl
162         {
163           \tl_set:Nx #2{\exp_last_unbraced:NV\use_i:nn  \l__tag_get_tmpc_tl}
164           \tl_set:Nx #3{\exp_last_unbraced:NV\use_ii:nn \l__tag_get_tmpc_tl}
165         }
166         {
167           \tl_clear:N#2
168           \tl_clear:N#3
169         }
170     }
171 \cs_generate_variant:Nn\__tag_struct_get_parentrole:nNN {eNN}
```

(*End of definition for* `\__tag_struct_get_parentrole:nNN`.)

4.4   Handlings kids

Commands to store the kids. Kids in a structure can be a reference to a mc-chunk, an object reference to another structure element, or a object reference to an annotation (through an OBJR object).

The command to store an mc-chunk, this is a dictionary of type MCR. It would be possible to write out the content directly as unnamed object and to store only the object reference, but probably this would be slower, and the PDF is more readable like this. The code doesn't try to avoid the use of the /Pg key by checking page numbers. That imho only slows down without much gain. In generic mode the page break code will perhaps to have to insert an additional mcid after an existing one. For this we use a property list At first an auxiliary to write the MCID dict. This should normally be expanded!

```
172 \cs_new:Npn \__tag_struct_mcid_dict:n #1 %#1 MCID absnum
173   {
174     <<
175      /Type \c_space_tl /MCR \c_space_tl

218        {
219          \pdf_object_ref_last:
220        }
221    }
222
223  \cs_generate_variant:Nn\__tag_struct_kid_OBJR_gput_right:nnn { xxx }
224
```

(*End of definition for* `\__tag_struct_kid_OBJR_gput_right:nnn`.)

`\__tag_struct_exchange_kid_command:N`
`\__tag_struct_exchange_kid_command:c`

In luamode it can happen that a single kid in a structure is split at a page break into two or more mcid. In this case the lua code has to convert put the dictionary of the kid into an array. See issue 13 at tagpdf repo. We exchange the dummy command for the kids to mark this case.

```
225  \cs_new_protected:Npn\__tag_struct_exchange_kid_command:N #1 %#1 = seq var
```

```
226  {
227    \seq_gpop_left:NN #1 \l__tag_tmpa_tl
228    \regex_replace_once:nnN
229      { \c{\__tag_mc_insert_mcid_kids:n} }
230      { \c{\__tag_mc_insert_mcid_single_kids:n} }
231      \l__tag_tmpa_tl
232    \seq_gput_left:NV #1 \l__tag_tmpa_tl
233  }
234
235  \cs_generate_variant:Nn\__tag_struct_exchange_kid_command:N { c }
```

(*End of definition for* __tag_struct_exchange_kid_command:N.)

__tag_struct_fill_kid_key:n   This command adds the kid info to the K entry. In lua mode the content contains commands which are expanded later. The argument is the structure number.

```
236  \cs_new_protected:Npn \__tag_struct_fill_kid_key:n #1 %#1 is the struct num
237  {
238    \bool_if:NF\g__tag_mode_lua_bool
239      {
240        \seq_clear:N \l__tag_tmpa_seq
241        \seq_map_inline:cn { g__tag_struct_kids_#1_seq }
242          { \seq_put_right:Nx \l__tag_tmpa_seq { ##1 } }
243        %\seq_show:c { g__tag_struct_kids_#1_seq }
244        %\seq_show:N \l__tag_tmpa_seq
245        \seq_remove_all:Nn \l__tag_tmpa_seq {}
246        %\seq_show:N \l__tag_tmpa_seq
247        \seq_gset_eq:cN { g__tag_struct_kids_#1_seq } \l__tag_tmpa_seq
248      }
249
250    \int_case:nnF
251      {
252        \seq_count:c
253          {
254            g__tag_struct_kids_#1_seq
255          }
256      }
257      {
258        { 0 }
259        { } %no kids, do nothing
260        { 1 } % 1 kid, insert
261        {
262          % in this case we need a special command in
263          % luamode to get the array right. See issue #13
264          \bool_if:NT\g__tag_mode_lua_bool
265            {
266              \__tag_struct_exchange_kid_command:c

287                    {
288                      \c_space_tl
289                    }
290                ]
291              }
292          }
293      }
294
```

(*End of definition for* `\__tag_struct_fill_kid_key:n`.)

4.5   Output of the object

`\__tag_struct_get_dict_content:nN`   This maps the dictionary content of a structure into a tl-var. Basically it does what `\pdfdict_use:n` does. TODO!! this looks over-complicated. Check if it can be done with pdfdict now.

```
295  \cs_new_protected:Npn \__tag_struct_get_dict_content:nN #1 #2 %#1: stucture num
296    {
297      \tl_clear:N #2
298      \seq_map_inline:cn
299        {
300          c__tag_struct_
301          \int_compare:nNnTF{#1}={0}{StructTreeRoot}{StructElem}
302          _entries_seq
303        }
304        {
305          \tl_put_right:Nx
306            #2
307            {
308              \prop_if_in:cnT
309                { g__tag_struct_#1_prop }
310                { ##1 }
311                {
312                  \c_space_tl/##1~
```

Some keys needs the option to format the key, e.g. add brackets for an array

```
313                  \cs_if_exist_use:cTF {__tag_struct_format_##1:e}
314                    {
315                      { \prop_item:cn{ g__tag_struct_#1_prop } { ##1 } }
316                    }
317                    {
318                      \prop_item:cn{ g__tag_struct_#1_prop } { ##1 }
```

```
319                           }
320                       }
321                   }
322               }
323           }
```

(*End of definition for* `\__tag_struct_get_dict_content:nN`.)

`\__tag_struct_format_Ref:n` Ref is an array, we store only the content to be able to extend it so the formatting command adds the brackets:

```
324 \cs_new:Nn\__tag_struct_format_Ref:n{[#1]}
325 \cs_generate_variant:Nn\__tag_struct_format_Ref:n{e}
```

(*End of definition for* `\__tag_struct_format_Ref:n`.)

`\__tag_struct_write_obj:n` This writes out the structure object. This is done in the finish code, in the tree module and guarded by the tree boolean.

```
326 \cs_new_protected:Npn \__tag_struct_write_obj:n #1 % #1 is the struct num
327   {
328     \pdf_object_if_exist:nTF { __tag/struct/#1 }
329       {
```

It can happen that a structure is not used and so has not parent. Simply ignoring it is problematic as it is also recorded in the IDTree, so we make an artifact out of it.

```
330         \prop_get:cnNF { g__tag_struct_#1_prop } {P}\l__tag_tmpb_tl
331           {
332             \prop_gput:cnx { g__tag_struct_#1_prop } {P}{\pdf_object_ref:n { __tag/struct/0 }
333             \prop_gput:cnx { g__tag_struct_#1_prop } {S}{/Artifact}
334             \seq_if_empty:cF {g__tag_struct_kids_#1_seq}
335               {
336                 \msg_warning:nnxx
337                   {tag}
338                   {struct-orphan}
339                   { #1 }
340                   {\seq_count:c{g__tag_struct_kids_#1_seq}}
341               }
342           }
343         \__tag_struct_fill_kid_key:n { #1 }
344         \__tag_struct_get_dict_content:nN { #1 } \l__tag_tmpa_tl
345         \exp_args:Nx
346             \pdf_object_write:nnx
347             { __tag/struct/#1 }
348             {dict}
349             {
350               \l__tag_tmpa_tl\c_space_tl
351               /ID~\__tag_struct_get_id:n{#1}
352             }
353
354       }
355       {
356         \msg_error:nnn { tag } { struct-no-objnum } { #1}
357       }
358   }
```

(*End of definition for* `\__tag_struct_write_obj:n`.)

_tag_struct_insert_annot:nn   This is the command to insert an annotation into the structure. It can probably be used
for xform too.

Annotations used as structure content must

1. add a StructParent integer to their dictionary

2. push the object reference as OBJR object in the structure

3. Add a Structparent/obj-nr reference to the parent tree.

For a link this looks like this

```
        \tag_struct_begin:n { tag=Link }
        \tag_mc_begin:n { tag=Link }
(1)     \pdfannot_dict_put:nnx
          { link/URI }
          { StructParent }
          { \int_use:N\c@g_@@_parenttree_obj_int }
   <start link> link text <stop link>
(2+3)   \@@_struct_insert_annot:nn {obj ref}{parent num}
        \tag_mc_end:
        \tag_struct_end:
```

```
359  \cs_new_protected:Npn \__tag_struct_insert_annot:nn #1 #2 %#1 object reference to the annotati
360                                                            %#2 structparent number
361    {
362      \bool_if:NT \g__tag_active_struct_bool
363        {
364          %get the number of the parent structure:
365          \seq_get:NNF
366            \g__tag_struct_stack_seq
367            \l__tag_struct_stack_parent_tmpa_tl
368            {
369              \msg_error:nn { tag } { struct-faulty-nesting }
370            }
371          %put the obj number of the annot in the kid entry, this also creates
372          %the OBJR object
373          \ref_label:nn {__tag_objr_page_#2 }{ tagabspage }
374          \__tag_struct_kid_OBJR_gput_right:xxx
375            {
376              \l__tag_struct_stack_parent_tmpa_tl
377            }
378            {
379              #1 %
380            }
381            {
382              \pdf_pageobject_ref:n { \__tag_ref_value:nnn {__tag_objr_page_#2 }{ tagabspage }{
383            }
384          % add the parent obj number to the parent tree:
385          \exp_args:Nnx
386          \__tag_parenttree_add_objr:nn
387            {
388              #2
389            }
390            {
```

104

```
391             \pdf_object_ref:e { __tag/struct/\l__tag_struct_stack_parent_tmpa_tl }
392           }
393         % increase the int:
394         \stepcounter{ g__tag_parenttree_obj_int }
395       }
396   }
```

(*End of definition for* `\__tag_struct_insert_annot:nn`.)

`\__tag_get_data_struct_tag:`   this command allows `\tag_get:n` to get the current structure tag with the keyword `struct_tag`.

```
397 \cs_new:Npn \__tag_get_data_struct_tag:
398   {
399     \exp_args:Ne
400     \tl_tail:n
401       {
402         \prop_item:cn {g__tag_struct_\g__tag_struct_stack_current_tl _prop}{S}
403       }
404   }
```

(*End of definition for* `\__tag_get_data_struct_tag:`.)

`\__tag_get_data_struct_id:`   this command allows `\tag_get:n` to get the current structure id with the keyword `struct_id`.

```
405 \cs_new:Npn \__tag_get_data_struct_id:
406   {
407     \__tag_struct_get_id:n {\g__tag_struct_stack_current_tl}
408   }
409 ⟨/package⟩
```

(*End of definition for* `\__tag_get_data_struct_id:`.)

`\__tag_get_data_struct_num:`   this command allows `\tag_get:n` to get the current structure number with the keyword `struct_num`. We will need to handle nesting

```
410 ⟨*base⟩
411 \cs_new:Npn \__tag_get_data_struct_num:
412   {
413     \g__tag_struct_stack_current_tl
414   }
415 ⟨/base⟩
```

(*End of definition for* `\__tag_get_data_struct_num:`.)

`\__tag_get_data_struct_counter:`   this command allows `\tag_get:n` to get the current state of the structure counter with the keyword `struct_counter`. By comparing the numbers it can be used to check the number of structure commands in a piece of code.

```
416 ⟨*base⟩
417 \cs_new:Npn \__tag_get_data_struct_counter:
418   {
419     \int_use:N \c@g__tag_struct_abs_int
420   }
421 ⟨/base⟩
```

(*End of definition for* `\__tag_get_data_struct_counter:`.)

5 Keys

This are the keys for the user commands. we store the tag in a variable. But we should be careful, it is only reliable at the begin.

```
422  ⟨*package⟩
423  \keys_define:nn { __tag / struct }
424    {
425      label .tl_set:N       = \l__tag_struct_key_label_tl,
426      stash .bool_set:N      = \l__tag_struct_elem_stash_bool,
427      parent .code:n         =
428        {
429          \bool_lazy_and:nnTF
430            {
431              \prop_if_exist_p:c { g__tag_struct_\int_eval:n {#1}_prop }
432            }
433            {
434              \int_compare_p:nNn {#1}<{\c@g__tag_struct_abs_int}
435            }
436            { \tl_set:Nx \l__tag_struct_stack_parent_tmpa_tl { \int_eval:n {#1} } }
437            {
438              \msg_warning:nnxx { tag } { struct-unknown }
439                { \int_eval:n {#1} }
440                { parent~key~ignored }
441            }
442        },
443      parent .default:n    = {-1},
444      tag   .code:n        = % S property
445        {
446          \seq_set_split:Nne \l__tag_tmpa_seq { / } {#1/\prop_item:Ne\g__tag_role_tags_NS_prop{#
447          \tl_gset:Nx \g__tag_struct_tag_tl   { \seq_item:Nn\l__tag_tmpa_seq {1} }
448          \tl_gset:Nx \g__tag_struct_tag_NS_tl{ \seq_item:Nn\l__tag_tmpa_seq {2} }

(*End of definition for* `label` *(struct-key) and others. These functions are documented on page 91.*)

keys for the AF keys (associated files). They use commands from l3pdffile! The stream variants use txt as extension to get the mimetype. TODO: check if this should be configurable. For math we will perhaps need another extension. AF is an array and can be used more than once, so we store it in a tl. which is expanded. AFinline currently uses the fix extention txt. texsource is a special variant which creates a tex-file, it expects a tl-var as value (e.g. from math grabbing)

This variable is used to number the AF-object names

7   Attributes and attribute classes

```
1013  ⟨*header⟩
1014  \ProvidesExplPackage {tagpdf-attr-code} {2023-08-04} {0.98k}
1015    {part of tagpdf - code related to attributes and attribute classes}
1016  ⟨/header⟩
```

7.1   Variables

\g__tag_attr_entries_prop
\g__tag_attr_class_used_seq
\g__tag_attr_objref_prop
\l__tag_attr_value_tl

\g_@@_attr_entries_prop will store attribute names and their dictionary content. \g_@@_attr_class_used_seq will hold the attributes which have been used as class name. \l_@@_attr_value_tl is used to build the attribute array or key. Everytime an attribute is used for the first time, and object is created with its content, the name-object reference relation is stored in \g_@@_attr_objref_prop

```
1017  ⟨*package⟩
1018  \prop_new:N \g__tag_attr_entries_prop
1019  \seq_new:N  \g__tag_attr_class_used_seq
1020  \tl_new:N   \l__tag_attr_value_tl
1021  \prop_new:N \g__tag_attr_objref_prop %will contain obj num of used attributes
```

(*End of definition for* \g__tag_attr_entries_prop *and others.*)

118

7.2 Commands and keys

__tag_attr_new_entry:nn
newattribute␣(setup-key)

This allows to define attributes. Defined attributes are stored in a global property. `newattribute` expects two brace group, the name and the content. The content typically needs an `/O` key for the owner. An example look like this.

```
\tagpdfsetup
 {
  newattribute =
   {TH-col}{/O /Table /Scope /Column},
  newattribute =
   {TH-row}{/O /Table /Scope /Row},
 }
```

```
1022 \cs_new_protected:Npn \__tag_attr_new_entry:nn #1 #2 %#1:name, #2: content
1023   {
1024     \prop_gput:Nen \g__tag_attr_entries_prop
1025       {\pdf_name_from_unicode_e:n{#1}}{#2}
1026   }
1027
1028 \keys_define:nn { __tag / setup }
1029   {
1030     newattribute .code:n =
1031       {
1032         \__tag_attr_new_entry:nn #1
1033       }
1034   }
```

(*End of definition for* __tag_attr_new_entry:nn *and* newattribute (setup-key)*. This function is documented on page 93.*)

attribute-class␣(struct-key)

attribute-class has to store the used attribute names so that they can be added to the ClassMap later.

```
1035 \keys_define:nn { __tag / struct }
1036   {
1037     attribute-class .code:n =
1038      {
1039        \clist_set:Nx \l__tag_tmpa_clist { #1 }
1040        \seq_set_from_clist:NN \l__tag_tmpb_seq \l__tag_tmpa_clist
```

we convert the names into pdf names with slash

```
1041        \seq_set_map_x:NNn \l__tag_tmpa_seq \l__tag_tmpb_seq
1042          {

Part VIII
The **tagpdf-luatex.def** Driver for luatex
Part of the tagpdf package

```
1 ⟨@@=tag⟩
2 ⟨∗luatex⟩
3 \ProvidesExplFile {tagpdf-luatex.def} {2023-08-04} {0.98k}
4   {tagpdf~driver~for~luatex}
```

1 Loading the lua

The space code requires that the fall back font has been loaded and initialized, so we force that first. But perhaps this could be done in the kernel.

```
5 {
6   \fontencoding{TU}\fontfamily{lmr}\fontseries{m}\fontshape{n}\fontsize{10pt}{10pt}\selectfont
7 }
8 \lua_now:e { tagpdf=require('tagpdf.lua') }
```

The following defines wrappers around prop and seq commands to store the data also in lua tables. I probably want also lua tables I put them in the ltx.@@.tables namespaces The tables will be named like the variables but without backslash To access such a table with a dynamical name create a string and then use ltx.@@.tables[string] Old code, I'm not quite sure if this was a good idea. Now I have mix of table in ltx.@@.tables and ltx.@@.mc/struct. And a lot is probably not needed. TODO: this should be cleaned up, but at least roles are currently using the table!

```

The module declaration

```
63 ⟨*lua⟩
64 -- tagpdf.lua
65 -- Ulrike Fischer
66
67 local ProvidesLuaModule = {
68     name          = "tagpdf",
69     version       = "0.98k",        --TAGVERSION
70     date          = "2023-08-04", --TAGDATE
71     description   = "tagpdf lua code",
72     license       = "The LATEX Project Public License 1.3c"
73 }
74
75 if luatexbase and luatexbase.provides_module then
76   luatexbase.provides_module (ProvidesLuaModule)
77 end
78
79 --[[
```

```
80  The code has quite probably a number of problems
81  - more variables should be local instead of global
82  - the naming is not always consistent due to the development of the code
83  - the traversing of the shipout box must be tested with more complicated setups
84  - it should probably handle more node types
85  -
86  --]]
87
```

Some comments about the lua structure.

```
88  --[[
89  the main table is named ltx.__tag. It contains the functions and also the data
90  collected during the compilation.
91
92  ltx.__tag.mc      will contain mc connected data.
93  ltx.__tag.struct will contain structure related data.
94  ltx.__tag.page    will contain page data
95  ltx.__tag.tables contains also data from mc and struct (from older code). This needs cleaning
96              There are certainly dublettes, but I don't dare yet ...
97  ltx.__tag.func    will contain (public) functions.
98  ltx.__tag.trace   will contain tracing/loging functions.
99  local funktions starts with __
100 functions meant for users will be in ltx.tag
101
102 functions
103  ltx.__tag.func.get_num_from (tag):    takes a tag (string) and returns the id number
104  ltx.__tag.func.output_num_from (tag): takes a tag (string) and prints (to tex) the id number
105  ltx.__tag.func.get_tag_from (num):    takes a num and returns the tag
106  ltx.__tag.func.output_tag_from (num): takes a num and prints (to tex) the tag
107  ltx.__tag.func.store_mc_data (num,key,data): stores key=data in ltx.__tag.mc[num]
108  ltx.__tag.func.store_mc_label (label,num): stores label=num in ltx.__tag.mc.labels
109  ltx.__tag.func.store_mc_kid (mcnum,kid,page): stores the mc-kids of mcnum on page page
110  ltx.__tag.func.store_mc_in_page(mcnum,mcpagecnt,page): stores in the page table the number o
111  ltx.__tag.func.store_struct_mcabs (structnum,mcnum): stores relations structnum<->mcnum (abs
112  ltx.__tag.func.mc_insert_kids (mcnum): inserts the /K entries for mcnum by wandering throught
113  ltx.__tag.func.mark_page_elements(box,mcpagecnt,mccntprev,mcopen,name,mctypeprev) : the main
114  ltx.__tag.func.mark_shipout (): a wrapper around the core function which inserts the last EMC
115  ltx.__tag.func.fill_parent_tree_line (page): outputs the entries of the parenttree for this p
116  ltx.__tag.func.output_parenttree(): outputs the content of the parenttree
117  ltx.__tag.func.pdf_object_ref(name): outputs the object reference for the object name
118  ltx.__tag.func.markspaceon(), ltx.__tag.func.markspaceoff(): (de)activates the marking of pos
119  ltx.__tag.trace.show_mc_data (num,loglevel): shows ltx.__tag.mc[num] is the current log level
120  ltx.__tag.trace.show_all_mc_data (max,loglevel): shows a maximum about mc's if the current lo
121  ltx.__tag.trace.show_seq: shows a sequence (array)
122  ltx.__tag.trace.show_struct_data (num): shows data of structure num
123  ltx.__tag.trace.show_prop: shows a prop
124  ltx.__tag.trace.log
125  ltx.__tag.trace.showspaces : boolean
126 --]]
127
```

This set-ups the main attribute registers. The mc_type attribute stores the type (P, Span etc) encoded as a num, The mc_cnt attribute stores the absolute number and allows so to see if a node belongs to the same mc-chunk.

The interwordspace attr is set by the function `@@_mark_spaces`, and marks the place where spaces should be inserted. The interwordfont attr is set by the function `@@_mark_spaces` too and stores the font, so that we can decide which font to use for the real space char.

```
128 local mctypeattributeid  = luatexbase.new_attribute ("g__tag_mc_type_attr")
129 local mccntattributeid   = luatexbase.new_attribute ("g__tag_mc_cnt_attr")
130 local iwspaceattributeid = luatexbase.new_attribute ("g__tag_interwordspace_attr")
131 local iwfontattributeid  = luatexbase.new_attribute ("g__tag_interwordfont_attr")
```

with this token we can query the state of the boolean and so detect if unmarked nodes should be marked as attributes

```
132 local tagunmarkedbool= token.create("g__tag_tagunmarked_bool")
133 local truebool       = token.create("c_true_bool")
```

Now a number of local versions from global tables. Not all is perhaps needed, most node variants were copied from lua-debug.

```
134 local catlatex        = luatexbase.registernumber("catcodetable@latex")
135 local tableinsert     = table.insert

161 local KERN           = node.id("kern")
162 local PENALTY        = node.id("penalty")
163 local LOCAL_PAR      = node.id("local_par")
164 local MATH           = node.id("math")
```

Now we setup the main table structure. ltx is used by other latex code too!

```
165 ltx              = ltx        or { }
166 ltx.__tag         = ltx.__tag        or { }
167 ltx.__tag.mc      = ltx.__tag.mc     or { } -- mc data
168 ltx.__tag.struct  = ltx.__tag.struct or { } -- struct data
169 ltx.__tag.tables  = ltx.__tag.tables or { } -- tables created with new prop and new seq.
170                                             -- wasn't a so great idea ...
```

```
171                                                 -- g__tag_role_tags_seq used by tag<-> is in this tabl
172                                                 -- used for pure lua tables too now!
173 ltx.__tag.page    = ltx.__tag.page   or  { } -- page data, currently only i->{0->mcnum,1->mcr
174 ltx.__tag.trace   = ltx.__tag.trace  or  { } -- show commands
175 ltx.__tag.func    = ltx.__tag.func   or  { } -- functions
176 ltx.__tag.conf    = ltx.__tag.conf   or  { } -- configuration variables
```

2 Logging functions

__tag_log
ltx.__tag.trace.log

This rather simple log function takes as argument a message (string) and a number and will output the message to the log/terminal if the current loglevel is greater or equal than num.

```
177 local __tag_log =
178  function (message,loglevel)
179   if (loglevel or 3) <= tex.count["l__tag_loglevel_int"] then
180    texio.write_nl("tagpdf: ".. message)
181   end
182  end
183
184 ltx.__tag.trace.log = __tag_log
```

(*End of definition for* `__tag_log` *and* `ltx.__tag.trace.log`.)

ltx.__tag.trace.show_seq

This shows the content of a seq as stored in the tables table. It is used by the \@@_seq_show:N function. It is not used in user commands, only for debugging, and so requires log level >0.

```
185 function ltx.__tag.trace.show_seq (seq)
186  if (type(seq) == "table") then
187   for i,v in ipairs(seq) do
188    __tag_log ("[" .. i .. "] => " .. tostring(v),1)
189   end
190  else
191   __tag_log ("sequence " .. tostring(seq) .. " not found",1)
192  end
193 end
```

(*End of definition for* `ltx.__tag.trace.show_seq`.)

__tag_pairs_prop
ltx.__tag.trace.show_prop

This shows the content of a prop as stored in the tables table. It is used by the \@@_prop_show:N function.

```
194 local __tag_pairs_prop =
195  function  (prop)
196      local a = {}
197      for n in pairs(prop) do tableinsert(a, n) end
198      table.sort(a)
199      local i = 0                -- iterator variable
200      local iter = function ()   -- iterator function
201       i = i + 1
202       if a[i] == nil then return nil
203       else return a[i], prop[a[i]]
204       end
205      end
206      return iter
```

```
207    end
208
209
210 function ltx.__tag.trace.show_prop (prop)
211  if (type(prop) == "table") then
212   for i,v in __tag_pairs_prop (prop) do
213     __tag_log ("[" .. i .. "] => " .. tostring(v),1)
214   end
215  else
216    __tag_log ("prop " .. tostring(prop) .. " not found or not a table",1)
217  end
218  end
```

(*End of definition for* __tag_pairs_prop *and* ltx.__tag.trace.show_prop.)

ltx.__tag.trace.show_mc_data   This shows some data for a mc given by num. If something is shown depends on the log
level. The function is used by the following function and then in \ShowTagging

```
219 function ltx.__tag.trace.show_mc_data (num,loglevel)
220  if ltx.__tag and ltx.__tag.mc and ltx.__tag.mc[num] then
221   for k,v in pairs(ltx.__tag.mc[num]) do
222    __tag_log  ("mc"..num..": "..tostring(k).."=>"..tostring(v),loglevel)
223   end
224   if ltx.__tag.mc[num]["kids"] then
225   __tag_log ("mc" .. num .. " has " .. #ltx.__tag.mc[num]["kids"] .. " kids",loglevel)
226    for k,v in ipairs(ltx.__tag.mc[num]["kids"]) do
227     __tag_log ("mc ".. num .. " kid "..k.." =>" .. v.kid.." on page " ..v.page,loglevel)
228    end
229   end
230  else
231    __tag_log  ("mc"..num.." not found",loglevel)
232  end
233 end
```

(*End of definition for* ltx.__tag.trace.show_mc_data.)

ltx.__tag.trace.show_all_mc_data   This shows data for the mc's between min and max (numbers). It is used by the
\ShowTagging function.

```
234 function ltx.__tag.trace.show_all_mc_data (min,max,loglevel)
235  for i = min, max do
236   ltx.__tag.trace.show_mc_data (i,loglevel)
237  end
238  texio.write_nl("")
239 end
```

(*End of definition for* ltx.__tag.trace.show_all_mc_data.)

ltx.__tag.trace.show_struct_data   This function shows some struct data. Unused but kept for debugging.

```
240 function ltx.__tag.trace.show_struct_data (num)
241  if ltx.__tag and ltx.__tag.struct and ltx.__tag.struct[num] then
242   for k,v in ipairs(ltx.__tag.struct[num]) do
243    __tag_log  ("struct "..num..": "..tostring(k).."=>"..tostring(v),1)
244   end
245  else
246    __tag_log   ("struct "..num.." not found ",1)
247  end
248 end
```

(*End of definition for* `ltx.__tag.trace.show_struct_data`.)

3 Helper functions

3.1 Retrieve data functions

`__tag_get_mc_cnt_type_tag` This takes a node as argument and returns the mc-cnt, the mc-type and and the tag (calculated from the mc-cnt.

```
249 local __tag_get_mc_cnt_type_tag = function (n)
250   local mccnt      = nodegetattribute(n,mccntattributeid)  or -1
251   local mctype     = nodegetattribute(n,mctypeattributeid)  or -1
252   local tag        = ltx.__tag.func.get_tag_from(mctype)
253   return mccnt,mctype,tag
254 end
```

(*End of definition for* `__tag_get_mc_cnt_type_tag`.)

`__tag_get_mathsubtype` This function allows to detect if we are at the begin or the end of math. It takes as argument a mathnode.

```
255 local function __tag_get_mathsubtype  (mathnode)
256   if mathnode.subtype == 0 then
257     subtype = "beginmath"
258   else
259     subtype = "endmath"
260   end
261   return subtype
262 end
```

(*End of definition for* `__tag_get_mathsubtype`.)

`ltx.__tag.tables.role_tag_attribute` The first is a table with key a tag and value a number (the attribute) The second is an array with the attribute value as key.

```
263 ltx.__tag.tables.role_tag_attribute = {}
264 ltx.__tag.tables.role_attribute_tag = {}
```

(*End of definition for* `ltx.__tag.tables.role_tag_attribute`.)

`ltx.__tag.func.alloctag`

```
265 local __tag_alloctag =
266   function (tag)
267     if not ltx.__tag.tables.role_tag_attribute[tag] then
268       table.insert(ltx.__tag.tables.role_attribute_tag,tag)
269       ltx.__tag.tables.role_tag_attribute[tag]=#ltx.__tag.tables.role_attribute_tag
270       __tag_log  ("Add "..tag.." "..ltx.__tag.tables.role_tag_attribute[tag],3)
271     end
272   end
273 ltx.__tag.func.alloctag = __tag_alloctag
```

(*End of definition for* `ltx.__tag.func.alloctag`.)

These functions take as argument a string `tag`, and return the number under which is it recorded (and so the attribute value). The first function outputs the number for lua, while the `output` function outputs to tex.

```
274 local __tag_get_num_from =
275  function (tag)
276   if ltx.__tag.tables.role_tag_attribute[tag] then
277     a= ltx.__tag.tables.role_tag_attribute[tag]
278   else
279     a= -1
280   end
281   return a
282  end
283
284 ltx.__tag.func.get_num_from = __tag_get_num_from
285
286 function ltx.__tag.func.output_num_from (tag)
287  local num = __tag_get_num_from (tag)
288  tex.sprint(catlatex,num)
289  if num == -1 then
290    __tag_log ("Unknown tag "..tag.." used")
291  end
292 end
```

(*End of definition for* __tag_get_num_from *,* ltx.__tag.func.get_num_from *, and* ltx.__tag.func.output_-num_from *.*)

These functions are the opposites to the previous function: they take as argument a number (the attribute value) and return the string `tag`. The first function outputs the string for lua, while the `output` function outputs to tex.

```
293 local __tag_get_tag_from =
294  function  (num)
295   if ltx.__tag.tables.role_attribute_tag[num] then
296     a = ltx.__tag.tables.role_attribute_tag[num]
297   else
298     a= "UNKNOWN"
299   end
300   return a
301 end
302
303 ltx.__tag.func.get_tag_from = __tag_get_tag_from
304
305 function ltx.__tag.func.output_tag_from (num)
306    tex.sprint(catlatex,__tag_get_tag_from (num))
307 end
```

(*End of definition for* __tag_get_tag_from *,* ltx.__tag.func.get_tag_from *, and* ltx.__tag.func.output_-tag_from *.*)

This function stores for `key=data` for mc-chunk `num`. It is used in the tagpdf-mc code, to store for example the tag string, and the raw options.

```
308 function ltx.__tag.func.store_mc_data (num,key,data)
309  ltx.__tag.mc[num] = ltx.__tag.mc[num] or { }
310  ltx.__tag.mc[num][key] = data
311  __tag_log  ("INFO TEX-STORE-MC-DATA: "..num.." => "..tostring(key).." => "..tostring(data),3)
312 end
```

(*End of definition for* `ltx.__tag.func.store_mc_data`.)

ltx.__tag.func.store_mc_label   This function stores the `label=num` relationship in the `labels` subtable. TODO: this is probably unused and can go.

```
313 function ltx.__tag.func.store_mc_label (label,num)
314  ltx.__tag.mc["labels"] = ltx.__tag.mc["labels"] or { }
315  ltx.__tag.mc.labels[label] = num
316 end
```

(*End of definition for* `ltx.__tag.func.store_mc_label`.)

ltx.__tag.func.store_mc_kid   This function is used in the traversing code. It stores a sub-chunk of a mc `mcnum` into the `kids` table.

```
317 function ltx.__tag.func.store_mc_kid (mcnum,kid,page)
318  ltx.__tag.trace.log("INFO TAG-STORE-MC-KID: "..mcnum.." => " .. kid.." on page " .. page,3)
319  ltx.__tag.mc[mcnum]["kids"] = ltx.__tag.mc[mcnum]["kids"] or { }
320  local kidtable = {kid=kid,page=page}
321  tableinsert(ltx.__tag.mc[mcnum]["kids"], kidtable )
322 end
```

(*End of definition for* `ltx.__tag.func.store_mc_kid`.)

ltx.__tag.func.mc_num_of_kids   This function returns the number of kids a mc `mcnum` has. We need to account for the case that a mc can have no kids.

```
323 function ltx.__tag.func.mc_num_of_kids (mcnum)
324  local num = 0
325  if ltx.__tag.mc[mcnum] and ltx.__tag.mc[mcnum]["kids"] then
326    num = #ltx.__tag.mc[mcnum]["kids"]
327  end
328  ltx.__tag.trace.log ("INFO MC-KID-NUMBERS: " .. mcnum .. "has " .. num .. "KIDS",4)
329  return num
330 end
```

(*End of definition for* `ltx.__tag.func.mc_num_of_kids`.)

3.2 Functions to insert the pdf literals

__tag_backend_create_emc_node
__tag_insert_emc_node

This insert the emc node. We support also dvips and dvipdfmx backend

```
331 local __tag_backend_create_emc_node
332 if tex.outputmode == 0 then
333  if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
334    function __tag_backend_create_emc_node ()
335      local emcnode = nodenew("whatsit","special")
336        emcnode.data = "pdf:code EMC"
337      return emcnode
338    end
339  else -- assume a dvips variant
340    function __tag_backend_create_emc_node ()
341      local emcnode = nodenew("whatsit","special")
342        emcnode.data = "ps:SDict begin mark /EMC pdfmark end"
343      return emcnode
344    end
345  end
346 else -- pdf mode
```

```
347   function __tag_backend_create_emc_node ()
348     local emcnode = nodenew("whatsit","pdf_literal")
349       emcnode.data = "EMC"
350       emcnode.mode=1
351     return emcnode
352   end
353 end
354
355 local function __tag_insert_emc_node (head,current)
356   local emcnode= __tag_backend_create_emc_node()
357   head = node.insert_before(head,current,emcnode)
358   return head
359 end
```

(*End of definition for* __tag_backend_create_emc_node *and* __tag_insert_emc_node.)

__tag_backend_create_bmc_node
__tag_insert_bmc_node

This inserts a simple bmc node

```
360 local __tag_backend_create_bmc_node
361 if tex.outputmode == 0 then
362  if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
363   function __tag_backend_create_bmc_node (tag)
364     local bmcnode = nodenew("whatsit","special")
365     bmcnode.data = "pdf:code /"..tag.." BMC"
366     return bmcnode
367   end
368  else -- assume a dvips variant
369   function __tag_backend_create_bmc_node (tag)
370     local bmcnode = nodenew("whatsit","special")
371     bmcnode.data = "ps:SDict begin mark/"..tag.." BMC pdfmark end"
372     return bmcnode
373   end
374  end
375 else -- pdf mode
376   function __tag_backend_create_bmc_node (tag)
377     local bmcnode = nodenew("whatsit","pdf_literal")
378     bmcnode.data = "/"..tag.." BMC"
379     bmcnode.mode=1
380     return bmcnode
381   end
382 end
383
384 local function __tag_insert_bmc_node (head,current,tag)
385   local bmcnode = __tag_backend_create_bmc_node (tag)
386   head = node.insert_before(head,current,bmcnode)
387   return head
388 end
```

(*End of definition for* __tag_backend_create_bmc_node *and* __tag_insert_bmc_node.)

__tag_backend_create_bdc_node
__tag_insert_bdc_node

This inserts a bcd node with a fix dict. TODO: check if this is still used, now that we create properties.

```
389 local __tag_backend_create_bdc_node
390
391 if tex.outputmode == 0 then
```

131

```
392  if token.get_macro("c_sys_backend_str") == "dvipdfmx" then
393   function __tag_backend_create_bdc_node (tag,dict)
394     local bdcnode = nodenew("whatsit","special")
395     bdcnode.data = "pdf:code /"..tag.."<<"..dict..">> BDC"
396     return bdcnode
397   end
398  else -- assume a dvips variant
399   function __tag_backend_create_bdc_node (tag,dict)
400     local bdcnode = nodenew("whatsit","special")
401     bdcnode.data = "ps:SDict begin mark/"..tag.."<<"..dict..">> BDC pdfmark end"
402     return bdcnode
403   end
404  end
405  else -- pdf mode
406   function __tag_backend_create_bdc_node (tag,dict)
407     local bdcnode = nodenew("whatsit","pdf_literal")
408     bdcnode.data = "/"..tag.."<<"..dict..">> BDC"
409     bdcnode.mode=1
410     return bdcnode
411   end
412  end
413
414  local function __tag_insert_bdc_node (head,current,tag,dict)
415   bdcnode= __tag_backend_create_bdc_node (tag,dict)
416   head = node.insert_before(head,current,bdcnode)
417   return head
418  end
```

(*End of definition for* `__tag_backend_create_bdc_node` *and* `__tag_insert_bdc_node`.)

`__tag_pdf_object_ref`
ltx.__tag.func.pdf_object_ref

This allows to reference a pdf object reserved with the l3pdf command by name. The return value is n 0 R, if the object doesn't exist, n is 0. TODO: is uses internal l3pdf commands, this should be properly supported by l3pdf

```
419  local function __tag_pdf_object_ref (name)
420     local tokenname = 'c__pdf_backend_object_'..name..'_int'
421     local object = token.create(tokenname).index..' 0 R'
422     return object
423  end
424  ltx.__tag.func.pdf_object_ref=__tag_pdf_object_ref
```

(*End of definition for* `__tag_pdf_object_ref` *and* `ltx.__tag.func.pdf_object_ref`.)

4   Function for the real space chars

`__tag_show_spacemark`

A debugging function, it is used to inserts red color markers in the places where space chars can go, it can have side effects so not always reliable, but ok.

```
425  local function __tag_show_spacemark (head,current,color,height)
426   local markcolor = color or "1 0 0"
427   local markheight = height or 10
428   local pdfstring
429   if tex.outputmode == 0 then
430     -- ignore dvi mode for now
431   else
```

132

```
432    pdfstring = node.new("whatsit","pdf_literal")
433        pdfstring.data =
434        string.format("q "..markcolor.." RG "..markcolor.." rg 0.4 w 0 %g m 0 %g l S Q",-
    3,markheight)
435        head = node.insert_after(head,current,pdfstring)
436    return head
437  end
438 end
```

(*End of definition for* `__tag_show_spacemark`.)

`__tag_fakespace` This is used to define a lua version of `\pdffakespace`
`ltx.__tag.func.fakespace`
```
439 local function __tag_fakespace()
440     tex.setattribute(iwspaceattributeid,1)
441     tex.setattribute(iwfontattributeid,font.current())
442 end
443 ltx.__tag.func.fakespace = __tag_fakespace
```

(*End of definition for* `__tag_fakespace` *and* `ltx.__tag.func.fakespace`.)

`__tag_mark_spaces` a function to mark up places where real space chars should be inserted. It only sets attributes, these are then be used in a later traversing which inserts the actual spaces. When space handling is activated this function is inserted in some callbacks.

```
444 --[[ a function to mark up places where real space chars should be inserted
445     it only sets an attribute.
446 --]]
447
448 local function __tag_mark_spaces (head)
449   local inside_math = false
450   for n in nodetraverse(head) do
451     local id = n.id
452     if id == GLYPH then
453       local glyph = n
454       if glyph.next and (glyph.next.id == GLUE)
455         and not inside_math  and (glyph.next.width >0)
456       then
457         nodesetattribute(glyph.next,iwspaceattributeid,1)
458         nodesetattribute(glyph.next,iwfontattributeid,glyph.font)
459       -- for debugging
460        if ltx.__tag.trace.showspaces then
461         __tag_show_spacemark (head,glyph)
462        end
463      elseif glyph.next and (glyph.next.id==KERN) and not inside_math then
464        local kern = glyph.next
465        if kern.next and (kern.next.id== GLUE)  and (kern.next.width >0)
466        then
467         nodesetattribute(kern.next,iwspaceattributeid,1)
468         nodesetattribute(kern.next,iwfontattributeid,glyph.font)
469        end
470       end
471      --  look also back
472      if glyph.prev and (glyph.prev.id == GLUE)
473         and not inside_math
474         and (glyph.prev.width >0)
```

```
475        and not nodehasattribute(glyph.prev,iwspaceattributeid)
476      then
477        nodesetattribute(glyph.prev,iwspaceattributeid,1)
478        nodesetattribute(glyph.prev,iwfontattributeid,glyph.font)
479      -- for debugging
480       if ltx.__tag.trace.showspaces then
481         __tag_show_spacemark (head,glyph)
482       end
483      end

```

(*End of definition for* `__tag_activate_mark_space`, `ltx.__tag.func.markspaceon`, *and* `ltx.__tag.func.markspaceoff`.)
    We need two local variable to setup a default space char.

```
520 local default_space_char = nodenew(GLYPH)
```

```
521 local default_fontid    = fontid("TU/lmr/m/n/10")
522 default_space_char.char  = 32
523 default_space_char.font  = default_fontid
```

And a function to check as best as possible if a font has a space:

```
524 local function __tag_font_has_space (fontid)
525   t= fonts.hashes.identifiers[fontid]
526   if luaotfload.aux.slot_of_name(fontid,"space")
527     or t.characters and t.characters[32] and t.characters[32]["unicode"]==32
528   then
529     return true
530   else
531     return false
532   end
533 end
```

__tag_space_chars_shipout
ltx.__tag.func.space_chars_shipout

These is the main function to insert real space chars. It inserts a glyph before every glue which has been marked previously. The attributes are copied from the glue, so if the tagging is done later, it will be tagged like it.

```
534 local function __tag_space_chars_shipout (box)
535   local head = box.head
536   if head then
537     for n in node.traverse(head) do

5   Function for the tagging

ltx.__tag.func.mc_insert_kids   This is the main function to insert the K entry into a StructElem object. It is used in
tagpdf-mc-luacode module. The `single` attribute allows to handle the case that a single
mc on the tex side can have more than one kid after the processing here, and so we get
the correct array/non array setup.

```
571 function ltx.__tag.func.mc_insert_kids (mcnum,single)
572   if ltx.__tag.mc[mcnum] then
573   ltx.__tag.trace.log("INFO TEX-MC-INSERT-KID-TEST: " .. mcnum,4)
574    if ltx.__tag.mc[mcnum]["kids"] then
575     if #ltx.__tag.mc[mcnum]["kids"] > 1 and single==1 then
576      tex.sprint("[")
577     end
578     for i,kidstable in ipairs( ltx.__tag.mc[mcnum]["kids"] ) do
579      local kidnum  = kidstable["kid"]
580      local kidpage = kidstable["page"]
581      local kidpageobjnum = pdfpageref(kidpage)
582      ltx.__tag.trace.log("INFO TEX-MC-INSERT-KID: " .. mcnum ..
583                         " insert KID " ..i..
584                         " with num " .. kidnum ..
585                         " on page " .. kidpage.."/"..kidpageobjnum,3)
586     tex.sprint(catlatex,"<</Type /MCR /Pg "..kidpageobjnum .. " 0 R /MCID "..kidnum.. ">> " )
587     end
588     if #ltx.__tag.mc[mcnum]["kids"] > 1 and single==1 then
589      tex.sprint("]")
590     end
591    else
592     -- this is typically not a problem, e.g. empty hbox in footer/header can
593     -- trigger this warning.
594     ltx.__tag.trace.log("WARN TEX-MC-INSERT-NO-KIDS: "..mcnum.." has no kids",2)
595     if single==1 then
596       tex.sprint("null")
597     end
598    end
599   else
600    ltx.__tag.trace.log("WARN TEX-MC-INSERT-MISSING: "..mcnum.." doesn't exist",0)
601   end
602 end
```

(*End of definition for* `ltx.__tag.func.mc_insert_kids`.)

ltx.__tag.func.store_struct_mcabs   This function is used in the tagpdf-mc-luacode. It store the absolute count of the mc
into the current structure. This must be done ordered.

```
603 function ltx.__tag.func.store_struct_mcabs (structnum,mcnum)
604   ltx.__tag.struct[structnum]=ltx.__tag.struct[structnum] or { }
605   ltx.__tag.struct[structnum]["mc"]=ltx.__tag.struct[structnum]["mc"] or { }
606   -- a structure can contain more than on mc chunk, the content should be ordered
607   tableinsert(ltx.__tag.struct[structnum]["mc"],mcnum)
```

```
608  ltx.__tag.trace.log("INFO TEX-MC-INTO-STRUCT: "..
609                       mcnum.." inserted in struct "..structnum,3)
610  -- but every mc can only be in one structure
611  ltx.__tag.mc[mcnum]= ltx.__tag.mc[mcnum] or { }
612  ltx.__tag.mc[mcnum]["parent"] = structnum
613  end
614
```

(*End of definition for* `ltx.__tag.func.store_struct_mcabs`.)

<div style="text-align: right"><code>ltx.__tag.func.store_mc_in_page</code></div>

This is used in the traversing code and stores the relation between abs count and page count.

```
615  -- pay attention: lua counts arrays from 1, tex pages from one
616  -- mcid and arrays in pdf count from 0.
617  function ltx.__tag.func.store_mc_in_page (mcnum,mcpagecnt,page)
618   ltx.__tag.page[page] = ltx.__tag.page[page] or {}
619   ltx.__tag.page[page][mcpagecnt] = mcnum
620   ltx.__tag.trace.log("INFO TAG-MC-INTO-PAGE: page " .. page ..
621                       ": inserting MCID " .. mcpagecnt .. " => " .. mcnum,3)
622  end
```

(*End of definition for* `ltx.__tag.func.store_mc_in_page`.)

<div style="text-align: right"><code>ltx.__tag.func.update_mc_attributes</code></div>

This updates the mc-attributes of a box. It should only be used on boxes which don't contain structure elements. The arguments are a box, the mc-num and the type (as a number)

```
623  local function __tag_update_mc_attributes (head,mcnum,type)
624   for n in node.traverse(head) do
625     node.set_attribute(n,mccntattributeid,mcnum)
626     node.set_attribute(n,mctypeattributeid,type)
627     if n.id == HLIST or n.id == VLIST then
628       __tag_update_mc_attributes (n.list,mcnum,type)
629     end
630   end
631   return head
632  end
633  ltx.__tag.func.update_mc_attributes = __tag_update_mc_attributes
```

(*End of definition for* `ltx.__tag.func.update_mc_attributes`.)

<div style="text-align: right"><code>ltx.__tag.func.mark_page_elements</code></div>

782                        " TYPE ".. node.type(node.getid(box)),4)
783   return mcopen,mcpagecnt,mccntprev,mctypeprev
784 end
785
```

(*End of definition for* `ltx.__tag.func.mark_page_elements`.)

`ltx.__tag.func.mark_shipout`   This is the function used in the callback. Beside calling the traversing function it also checks if there is an open MC-chunk from a page break and insert the needed EMC literal.

```
786 function ltx.__tag.func.mark_shipout (box)
787  mcopen = ltx.__tag.func.mark_page_elements (box,-1,-100,0,"Shipout",-1)
788  if mcopen~=0 then -- there is a chunk open, close it (hope there is only one ...
789   local emcnode = __tag_backend_create_emc_node ()
790   local list = box.list
791   if list then
792      list = node.insert_after (list,node.tail(list),emcnode)
793      mcopen = mcopen - 1
794      ltx.__tag.trace.log ("INFO SHIPOUT-INSERT-LAST-EMC: MCOPEN " .. mcopen,3)
795   else
796      ltx.__tag.trace.log ("WARN SHIPOUT-UPS: this shouldn't happen",0)
797   end
798   if mcopen ~=0 then
799      ltx.__tag.trace.log ("WARN SHIPOUT-MC-OPEN: " .. mcopen,1)
800   end
801  end
802 end
```

140

(*End of definition for* `ltx.__tag.func.mark_shipout`.)

6 Parenttree

These functions create the parent tree. The second, main function is used in the tagpdf-tree code. TODO check if the tree code can move into the backend code.

```
803 function ltx.__tag.func.fill_parent_tree_line (page)
804     -- we need to get page-> i=kid -> mcnum -> structnum
805     -- pay attention: the kid numbers and the page number in the parent tree start with 0!
806     local numsentry =""
807     local pdfpage = page-1
808     if ltx.__tag.page[page] and ltx.__tag.page[page][0] then
809     mcchunks=#ltx.__tag.page[page]
810     ltx.__tag.trace.log("INFO PARENTTREE-NUM:  page "..
811                 page.." has "..mcchunks.."+1 Elements ",4)
812     for i=0,mcchunks do
813     -- what does this log??
814      ltx.__tag.trace.log("INFO PARENTTREE-CHUNKS:   "..
815        ltx.__tag.page[page][i],4)
816     end
817     if mcchunks == 0 then
818      -- only one chunk so no need for an array
819      local mcnum  = ltx.__tag.page[page][0]
820      local structnum = ltx.__tag.mc[mcnum]["parent"]
821      local propname  = "g__tag_struct_"..structnum.."_prop"
822      --local objref  = ltx.__tag.tables[propname]["objref"] or "XXXX"
823      local objref = __tag_pdf_object_ref('__tag/struct/'..structnum)
824      ltx.__tag.trace.log("INFO PARENTTREE-STRUCT-OBJREF:  =====>"..
825        tostring(objref),5)
826      numsentry = pdfpage .. " ["..  objref .. "]"
827      ltx.__tag.trace.log("INFO PARENTTREE-NUMENTRY: page " ..
828        page.. " num entry = ".. numsentry,3)

Part IX

The **tagpdf-roles** module
Tags, roles and namesspace code
Part of the tagpdf package

<div style="font-family:monospace">
add-new-tag␣(setup-key)
tag␣(rolemap-key)
namespace␣(rolemap-key)
role␣(rolemap-key)
role-namespace␣(rolemap-key)
</div>

The `add-new-tag` key can be used in `\tagpdfsetup` to declare and rolemap new tags. It takes as value a key-value list or a simple `new-tag/old-tag`.

The key-value list knows the following keys:

tag This is the name of the new tag as it should then be used in `\tagstructbegin`.

namespace This is the namespace of the new tag. The value should be a shorthand of a namespace. The allowed values are currently `pdf`, `pdf2`, `mathml`,`latex`, `latex-book` and `user`. The default value (and recommended value for a new tag) is `user`. The public name of the user namespace is `tag/NS/user`. This can be used to reference the namespace e.g. in attributes.

role This is the tag the tag should be mapped too. In a PDF 1.7 or earlier this is normally a tag from the `pdf` set, in PDF 2.0 from the `pdf`, `pdf2` and `mathml` set. It can also be a user tag. The tag must be declared before, as the code retrieves the class of the new tag from it. The PDF format allows mapping to be done transitively. But tagpdf can't/won't check such unusual role mapping.

role-namespace If the role is a known tag the default value is the default namespace of this tag. With this key a specific namespace can be forced.

Namespaces are mostly a PDF 2.0 property, but it doesn't harm to set them also in a PDF 1.7 or earlier.

`\tag_check_child:nn`_TF_   `\tag_check_child:nn{`⟨*tag*⟩`}{`⟨*namespace*⟩`} {`⟨*true code*⟩`} {`⟨*false code*⟩`}`

This checks if the tag ⟨*tag*⟩ from the name space ⟨*namespace*⟩ can be used at the current position. In tagpdf-base it is always true.

```

1   Code related to roles and structure names

⟨∗package⟩

1.1 Variables

Tags are used in structures (`\tagstructbegin`) and mc-chunks (`\tagmcbegin`).

They have a name (a string), in lua a number (for the lua attribute), and in PDF 2.0 belong to one or more name spaces, with one being the default name space.

Tags of structures are classified, e.g. as grouping, inline or block level structure (and a few special classes like lists and tables), and must follow containments rules depending on their classification (for example a inline structure can not contain a block level structure). New tags inherit their classification from their rolemapping to the standard namespaces (`pdf` and/or `pdf2`). We store this classification as it will probably be needed for tests but currently the data is not much used. The classification for math (and the containment rules) is unclear currently and so not set.

The attribute number is only relevant in lua and only for the MC chunks (so tags with the same name from different names spaces can have the same number), and so only stored if luatex is detected.

Due to the namespaces the storing and processing of tags and there data are different in various places for PDF 2.0 and PDF <2.0, which makes things a bit difficult and leads to some duplications. Perhaps at some time there should be a clear split.

This are the main variables used by the code:

`\g__tag_role_tags_NS_prop` This is the core list of tag names. It uses tags as keys and the shorthand (e.g. pdf2, or mathml) of the default name space as value.

In pdf 2.0 the value is needed in the structure dictionaries.

`\g__tag_role_tags_class_prop` This contains for each tag a classification type. It is used in pdf <2.0.

`\g__tag_role_NS_prop` This contains the names spaces. The values are the object references. They are used in pdf 2.0.

`\g__tag_role_rolemap_prop` This contains for each tag the role to a standard tag. It is used in pdf<2.0 for tag checking and to fill at the end the RoleMap dictionary.

`g_@@_role/RoleMap_dict` This dictionary contains the standard rolemaps. It is relevant only for pdf <2.0.

`\g__tag_role_NS_<ns>_prop` This prop contains the tags of a name space and their role. The props are also use for remapping. As value they contain two brace groups: tag and namespace. In pdf <2.0 the namespace is empty.

`\g__tag_role_NS_<ns>_class_prop` This prop contains the tags of a name space and their type. The value is only needed for pdf 2.0.

`\g__tag_role_index_prop` This prop contains the standard tags (pdf in pdf<2.0, pdf,pdf2 + mathml in pdf 2.0) as keys, the values are a two-digit number. These numbers are used to get the containment rule of two tags from the intarray.

`\l__tag_role_debug_prop` This property is used to pass some info around for info messages or debugging.

`\g__tag_role_tags_NS_prop` This is the core list of tag names. It uses tags as keys and the shorthand (e.g. pdf2, or mathml) of the default name space as value. We store the default name space also in pdf <2.0, even if not needed: it doesn't harm and simplifies the code. There is no need to access this from lua, so we use the standard prop commands.

```
7 \prop_new:N    \g__tag_role_tags_NS_prop
```

(*End of definition for* `\g__tag_role_tags_NS_prop`.)

`\g__tag_role_tags_class_prop` With pdf 2.0 we store the class in the NS dependant props. With pdf <2.0 we store for now the type(s) of a tag in a common prop. Tags that are rolemapped should get the type from the target.

```
8 \prop_new:N    \g__tag_role_tags_class_prop
```

(*End of definition for* `\g__tag_role_tags_class_prop`.)

`\g__tag_role_NS_prop` This holds the list of supported name spaces. The keys are the name tagpdf will use, the values the object reference. The urls identifier are stored in related dict object.

mathml http://www.w3.org/1998/Math/MathML

pdf2 http://iso.org/pdf2/ssn

pdf http://iso.org/pdf/ssn (default)

user `\c__tag_role_userNS_id_str` (random id, for user tags)

latex https://www.latex-project.org/ns/dflt/2022

latex-book https://www.latex-project.org/ns/book/2022

latex-inline https://www.latex-project.org/ns/inline/2022

More namespaces are possible and their objects references and their rolemaps must be collected so that an array can be written to the StructTreeRoot at the end (see tagpdf-tree). We use a prop to store the object reference as it will be needed rather often.

```
9 \prop_new:N \g__tag_role_NS_prop
```

(*End of definition for* `\g__tag_role_NS_prop`.)

`\g__tag_role_index_prop` This prop contains the standard tags (pdf in pdf<2.0, pdf,pdf2 + mathml in pdf 2.0) as keys, the values are a two-digit number. These numbers are used to get the containment rule of two tags from the intarray.

```
10 \prop_new:N \g__tag_role_index_prop
```

(*End of definition for* `\g__tag_role_index_prop`.)

`\l__tag_role_debug_prop` This variable is used to pass more infos to debug messages.

```
11 \prop_new:N \l__tag_role_debug_prop
```

(*End of definition for* `\l__tag_role_debug_prop`.)

We need also a bunch of temporary variables.

`\l__tag_role_tag_tmpa_tl`
`\l__tag_role_tag_namespace_tmpa_tl`
`\l__tag_role_role_tmpa_tl`
`\l__tag_role_role_namespace_tmpa_tl`
`\l__tag_role_tmpa_seq`

```
12 \tl_new:N \l__tag_role_tag_tmpa_tl
13 \tl_new:N \l__tag_role_tag_namespace_tmpa_tl
14 \tl_new:N \l__tag_role_role_tmpa_tl
15 \tl_new:N \l__tag_role_role_namespace_tmpa_tl
16 \seq_new:N\l__tag_role_tmpa_seq
```

(*End of definition for* `\l__tag_role_tag_tmpa_tl` *and others.*)

1.2 Namespaces

The following commands setups a name space. With pdf version <2.0 this is only a prop with the rolemap. With pdf 2.0 a dictionary must be set up. Such a name space dictionaries can contain an optional `/Schema` and `/RoleMapNS` entry. We only reserve the objects but delay the writing to the finish code, where we can test if the keys and the name spaces are actually needed. This commands setups objects for the name space and its rolemap. It also initialize a dict to collect the rolemaps if needed, and a property with the tags of the name space and their rolemapping for loops. It is unclear if a reference to a schema file will be ever needed, but it doesn't harm . . . .

`g__tag_role/RoleMap_dict`
`\g__tag_role_rolemap_prop`

This is the object which contains the normal RoleMap. It is probably not needed in pdf 2.0 but currently kept.

```
17 \pdfdict_new:n {g__tag_role/RoleMap_dict}
18 \prop_new:N \g__tag_role_rolemap_prop
```

(*End of definition for* `g__tag_role/RoleMap_dict` *and* `\g__tag_role_rolemap_prop`.)

`\__tag_role_NS_new:nnn` `\__tag_role_NS_new:nnn{`⟨*shorthand*⟩`}{`⟨*URI-ID*⟩`}Schema`

`\__tag_role_NS_new:nnn`

```
19 \pdf_version_compare:NnTF < {2.0}
20  {
21    \cs_new_protected:Npn \__tag_role_NS_new:nnn #1 #2 #3
22      {
23        \prop_new:c { g__tag_role_NS_#1_prop }
24        \prop_new:c { g__tag_role_NS_#1_class_prop }
25        \prop_gput:Nnx \g__tag_role_NS_prop {#1}{}
26      }
27  }
28  {
29    \cs_new_protected:Npn \__tag_role_NS_new:nnn #1 #2 #3
30      {
31        \prop_new:c { g__tag_role_NS_#1_prop }
32        \prop_new:c { g__tag_role_NS_#1_class_prop }
33        \pdf_object_new:n {tag/NS/#1}
34        \pdfdict_new:n      {g__tag_role/Namespace_#1_dict}
35        \pdf_object_new:n {__tag/RoleMapNS/#1}
36        \pdfdict_new:n      {g__tag_role/RoleMapNS_#1_dict}
37        \pdfdict_gput:nnn
38          {g__tag_role/Namespace_#1_dict}
39          {Type}
40          {/Namespace}
41        \pdf_string_from_unicode:nnN{utf8/string}{#2}\l__tag_tmpa_str
42        \tl_if_empty:NF \l__tag_tmpa_str
43          {
44            \pdfdict_gput:nnx
45              {g__tag_role/Namespace_#1_dict}
46              {NS}
47              {\l__tag_tmpa_str}
48          }
49        %RoleMapNS is added in tree
50        \tl_if_empty:nF  {#3}
```

```
51        {
52          \pdfdict_gput:nnx{g__tag_role/Namespace_#1_dict}
53           {Schema}{#3}
54        }
55      \prop_gput:Nnx \g__tag_role_NS_prop {#1}{\pdf_object_ref:n{tag/NS/#1}~}
56    }
57  }
```

(*End of definition for* `\__tag_role_NS_new:nnn`.)

We need an id for the user space. For the tests it should be possible to set it to a fix value. So we use random numbers which can be fixed by setting a seed. We fake a sort of GUID but do not try to be really exact as it doesn't matter ...

`\c__tag_role_userNS_id_str`

```
58  \str_const:Nx \c__tag_role_userNS_id_str
59   { data:,
60     \int_to_Hex:n{\int_rand:n {65535}}
61     \int_to_Hex:n{\int_rand:n {65535}}
62     -
63     \int_to_Hex:n{\int_rand:n {65535}}
64     -
65     \int_to_Hex:n{\int_rand:n {65535}}
66     -
67     \int_to_Hex:n{\int_rand:n {65535}}
68     -
69     \int_to_Hex:n{\int_rand:n {16777215}}
70     \int_to_Hex:n{\int_rand:n {16777215}}
71   }
```

(*End of definition for* `\c__tag_role_userNS_id_str`.)

Now we setup the standard names spaces. The mathml space is currently only loaded for pdf 2.0.

```
72  \__tag_role_NS_new:nnn {pdf}    {http://iso.org/pdf/ssn}{}
73  \__tag_role_NS_new:nnn {pdf2}   {http://iso.org/pdf2/ssn}{}
74  \pdf_version_compare:NnF < {2.0}
75   {
76     \__tag_role_NS_new:nnn {mathml}{http://www.w3.org/1998/Math/MathML}{}
77   }
78  \__tag_role_NS_new:nnn {latex} {https://www.latex-project.org/ns/dflt/2022}{}
79  \__tag_role_NS_new:nnn {latex-book} {https://www.latex-project.org/ns/book/2022}{}
80  \__tag_role_NS_new:nnn {latex-inline} {https://www.latex-project.org/ns/inline/2022}{}
81  \exp_args:Nnx
82    \__tag_role_NS_new:nnn {user}{\c__tag_role_userNS_id_str}{}
```

1.3 Adding a new tag

Both when reading the files and when setting up a tag manually we have to store data in various places.

`\__tag_role_alloctag:nnn`   This command allocates a new tag without role mapping. In the lua backend it will also record the attribute value.

```
83  \pdf_version_compare:NnTF < {2.0}
84   {
```

```
85    \sys_if_engine_luatex:TF
86      {
87        \cs_new_protected:Npn \__tag_role_alloctag:nnn #1 #2 #3 %#1 tagname, ns, type
88          {
89            \lua_now:e { ltx.__tag.func.alloctag ('#1') }
90            \prop_gput:Nnn \g__tag_role_tags_NS_prop    {#1}{#2}
91            \prop_gput:cnn {g__tag_role_NS_#2_prop}  {#1}{{}{}}

100           \prop_gput:cnn {g__tag_role_NS_#2_prop}  {#1}{{}{}}
101           \prop_gput:Nnn \g__tag_role_tags_class_prop {#1}{#3}
102           \prop_gput:cnn {g__tag_role_NS_#2_class_prop}  {#1}{--UNUSED--}
103         }
104     }
105   }
106   {
107    \sys_if_engine_luatex:TF
108      {
109        \cs_new_protected:Npn \__tag_role_alloctag:nnn #1 #2 #3 %#1 tagname, ns, type
110          {
111            \lua_now:e { ltx.__tag.func.alloctag ('#1') }
112            \prop_gput:Nnn \g__tag_role_tags_NS_prop    {#1}{#2}
113            \prop_gput:cnn {g__tag_role_NS_#2_prop}  {#1}{{}{}}
114            \prop_gput:Nnn \g__tag_role_tags_class_prop {#1}{--UNUSED--}
115            \prop_gput:cnn {g__tag_role_NS_#2_class_prop}  {#1}{#3}
116          }
117      }
118      {
119        \cs_new_protected:Npn \__tag_role_alloctag:nnn #1 #2 #3
120          {
121            \prop_gput:Nnn \g__tag_role_tags_NS_prop    {#1}{#2}
122            \prop_gput:cnn {g__tag_role_NS_#2_prop}  {#1}{{}{}}
123            \prop_gput:Nnn \g__tag_role_tags_class_prop {#1}{--UNUSED--}
124            \prop_gput:cnn {g__tag_role_NS_#2_class_prop}  {#1}{#3}
125          }
126      }
127   }
128 \cs_generate_variant:Nn  \__tag_role_alloctag:nnn {nnV}
```

(*End of definition for* __tag_role_alloctag:nnn.)

1.3.1   pdf 1.7 and earlier

__tag_role_add_tag:nn   The pdf 1.7 version has only two arguments: new and rolemap name. The role must be an existing tag and should not be empty. We allow to change the role of an existing tag: as the rolemap is written at the end not confusion can happen.

```
129 \cs_new_protected:Nn \__tag_role_add_tag:nn % (new) name, reference to old
130   {
```

checks and messages

```
131        \__tag_check_add_tag_role:nn {#1}{#2}

133          {
134            \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
135              {
136                \msg_info:nnn { tag }{new-tag}{#1}
137              }
138          }
```

now the addition

```
139        \prop_get:NnN \g__tag_role_tags_class_prop {#2}\l__tag_tmpa_tl
140        \quark_if_no_value:NT \l__tag_tmpa_tl
141          {
142            \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
143          }
144        \__tag_role_alloctag:nnV {#1}{user}\l__tag_tmpa_tl
```

We resolve rolemapping recursively so that all targets are stored as standard tags.

```
145        \tl_if_empty:nF { #2 }
146          {
147            \prop_get:NnN \g__tag_role_rolemap_prop {#2}\l__tag_tmpa_tl
148            \quark_if_no_value:NTF \l__tag_tmpa_tl
149              {
150                \prop_gput:Nnx \g__tag_role_rolemap_prop {#1}{\tl_to_str:n{#2}}
151              }
152              {
153                \prop_gput:NnV \g__tag_role_rolemap_prop {#1}\l__tag_tmpa_tl
154              }
155          }
156      }
157   \cs_generate_variant:Nn \__tag_role_add_tag:nn {VV,ne}
```

(*End of definition for* __tag_role_add_tag:nn.)

For the parent-child test we must be able to get the role. We use the same number of arguments as for the 2.0 command. If there is no role, we assume a standard tag.

__tag_role_get:nnNN

```
158   \pdf_version_compare:NnT < {2.0}
159     {
160       \cs_new:Npn \__tag_role_get:nnNN #1#2#3#4 %#1 tag, #2 NS, #3 tlvar which hold the role tag
161         {
162           \prop_get:NnNF \g__tag_role_rolemap_prop {#1}#3
163             {
164               \tl_set:Nn #3 {#1}
165             }
166           \tl_set:Nn #4 {}
167         }
168       \cs_generate_variant:Nn \__tag_role_get:nnNN {VVNN}
169     }
170
```

(*End of definition for* __tag_role_get:nnNN.)

1.3.2 The pdf 2.0 version

`\__tag_role_add_tag:nnnn` The pdf 2.0 version takes four arguments: tag/namespace/role/namespace

```
171 \cs_new_protected:Nn \__tag_role_add_tag:nnnn %tag/namespace/role/namespace
172   {
173     \__tag_check_add_tag_role:nnn {#1/#2}{#3}{#4}
174     \int_compare:nNnT {\l__tag_loglevel_int} > { 0 }
175       {
176         \msg_info:nnn { tag }{new-tag}{#1}
177       }
178     \prop_get:cnN { g__tag_role_NS_#4_class_prop } {#3}\l__tag_tmpa_tl
179     \quark_if_no_value:NT \l__tag_tmpa_tl
180       {
181         \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
182       }
183     \__tag_role_alloctag:nnV {#1}{#2}\l__tag_tmpa_tl
```

Do not remap standard tags. TODO add warning?

```
184     \tl_if_in:nnF {-pdf-pdf2-mathml-}{-#2-}
185      {
186        \pdfdict_gput:nnx {g__tag_role/RoleMapNS_#2_dict}{#1}
187          {
188            [
189              \pdf_name_from_unicode_e:n{#3}
190              \c_space_tl
191              \pdf_object_ref:n {tag/NS/#4}
192            ]
193          }
194      }
```

We resolve rolemapping recursively so that all targets are stored as standard tags for the tests.

```
195     \tl_if_empty:nF { #2 }
196       {
197         \prop_get:cnN { g__tag_role_NS_#4_prop } {#3}\l__tag_tmpa_tl
198         \quark_if_no_value:NTF \l__tag_tmpa_tl
199           {
200             \prop_gput:cnx { g__tag_role_NS_#2_prop } {#1}
201               {{\tl_to_str:n{#3}}{\tl_to_str:n{#4}}}
202           }
203           {
204             \prop_gput:cno { g__tag_role_NS_#2_prop } {#1}{\l__tag_tmpa_tl}
205           }
206       }
207   }
208 \cs_generate_variant:Nn \__tag_role_add_tag:nnnn {VVVV}
```

(*End of definition for* `\__tag_role_add_tag:nnnn`.)

For the parent-child test we must be able to get the role. We use the same number of arguments as for the <2.0 command (and assume that we don't need a name space)

`\__tag_role_get:nnNN`

```
209 \pdf_version_compare:NnF < {2.0}
210  {
211    \cs_new:Npn \__tag_role_get:nnNN #1#2#3#4
```

```
212    %#1 tag, #2 NS,
213    %#3 tlvar which hold the role tag
214    %#4 tlvar which hold the name of the target NS
215    {
216      \prop_get:cnNTF {g__tag_role_NS_#2_prop} {#1}\l__tag_tmpa_tl
217        {
218        \tl_set:Nx #3 {\exp_last_unbraced:NV\use_i:nn   \l__tag_tmpa_tl}
219        \tl_set:Nx #4 {\exp_last_unbraced:NV\use_ii:nn  \l__tag_tmpa_tl}
220        }
221        {
222        \tl_set:Nn #3 {#1}
223        \tl_set:Nn #4 {#2}
224        }
225    }
226    \cs_generate_variant:Nn \__tag_role_get:nnNN {VVNN}
227  }
```

(*End of definition for* `\__tag_role_get:nnNN`.)

1.4 Helper command to read the data from files

In this section we setup the helper command to read namespace files.

`\__tag_role_read_namespace_line:nw` This command will process a line in the name space file. The first argument is the name of the name space. The definition differ for pdf 2.0. as we have proper name spaces there. With pdf<2.0 special name spaces shouldn't update the default role or add to the rolemap again, they only store the values for later uses. We use a boolean here.

```
228  \bool_new:N\l__tag_role_update_bool
229  \bool_set_true:N \l__tag_role_update_bool

230  \pdf_version_compare:NnTF < {2.0}
231  {
232    \cs_new_protected:Npn \__tag_role_read_namespace_line:nw #1#2,#3,#4,#5,#6\q_stop %
233    % #1 NS, #2 tag, #3 rolemap, #4 NS rolemap #5 type
234      {
235        \tl_if_empty:nF { #2 }
236          {
237          \bool_if:NTF \l__tag_role_update_bool
238            {
239            \tl_if_empty:nTF {#5}
240              {
241                \prop_get:NnN \g__tag_role_tags_class_prop  {#3}\l__tag_tmpa_tl
242                \quark_if_no_value:NT \l__tag_tmpa_tl
243                  {
244                    \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
245                  }
246              }
247              {
248                \tl_set:Nn \l__tag_tmpa_tl {#5}
249              }
250            \__tag_role_alloctag:nnV {#2}{#1}\l__tag_tmpa_tl
251            \tl_if_eq:nnF {#2}{#3}
252              {
253                \__tag_role_add_tag:nn {#2}{#3}
254              }
```

```
255         \prop_gput:cnn {g__tag_role_NS_#1_prop}  {#2}{{#3}{}}
256           }
257           {
258             \prop_gput:cnn {g__tag_role_NS_#1_prop}  {#2}{{#3}{}}
259             \prop_gput:cnn {g__tag_role_NS_#1_class_prop}  {#2}{--UNUSED--}
260           }
261         }
262     }
263 }
264 {
265   \cs_new_protected:Npn \__tag_role_read_namespace_line:nw #1#2,#3,#4,#5,#6\q_stop %
266   % #1 NS, #2 tag, #3 rolemap, #4 NS rolemap #5 type
267   {
268     \tl_if_empty:nF {#2}
269       {
270       \tl_if_empty:nTF {#5}
271         {
272           \prop_get:cnN { g__tag_role_NS_#4_class_prop } {#3}\l__tag_tmpa_tl
273           \quark_if_no_value:NT \l__tag_tmpa_tl
274             {
275               \tl_set:Nn\l__tag_tmpa_tl{--UNKNOWN--}
276             }
277         }
278         {
279           \tl_set:Nn \l__tag_tmpa_tl {#5}
280         }
281       \__tag_role_alloctag:nnV {#2}{#1}\l__tag_tmpa_tl
282       \bool_lazy_and:nnT
283         { ! \tl_if_empty_p:n {#3} }{! \str_if_eq_p:nn {#1}{pdf2}}
284         {
285          \__tag_role_add_tag:nnnn {#2}{#1}{#3}{#4}
286         }
287       \prop_gput:cnn {g__tag_role_NS_#1_prop}  {#2}{{#3}{#4}}
288       }
289     }
290 }
```

(*End of definition for* __tag_role_read_namespace_line:nw.)

__tag_role_read_namespace:nn This command reads a namespace file in the format tagpdf-ns-XX.def

```
291 \cs_new_protected:Npn \__tag_role_read_namespace:nn #1 #2 %name of namespace #2 name of file
292   {
293     \prop_if_exist:cF {g__tag_role_NS_#1_prop}
294       { \msg_warning:nnn {tag}{namespace-unknown}{#1} }
295     \file_if_exist:nTF { tagpdf-ns-#2.def }
296      {
297        \ior_open:Nn \g_tmpa_ior {tagpdf-ns-#2.def}
298        \msg_info:nnn {tag}{read-namespace}{#2}
299        \ior_map_inline:Nn \g_tmpa_ior
300          {
301            \__tag_role_read_namespace_line:nw {#1} ##1,,,,\q_stop
302          }
303        \ior_close:N\g_tmpa_ior
304      }
```

```
305        {
306          \msg_info:nnn{tag}{namespace-missing}{#2}
307        }
308     }
309
```

(*End of definition for* `\__tag_role_read_namespace:nn`.)

`\__tag_role_read_namespace:n` This command reads the default namespace file.

```
310 \cs_new_protected:Npn \__tag_role_read_namespace:n #1 %name of namespace
311   {
312     \__tag_role_read_namespace:nn {#1}{#1}
313   }
```

(*End of definition for* `\__tag_role_read_namespace:n`.)

1.5 Reading the default data

The order is important as we want pdf2 and latex as default: if two namespace define the
same tag, the last one defines which one is used if the namespace is not explicitly given.

```
314 \__tag_role_read_namespace:n {pdf}
315 \__tag_role_read_namespace:n {pdf2}
316 \pdf_version_compare:NnF < {2.0}
317   {\__tag_role_read_namespace:n {mathml}}
```

in pdf 1.7 the following namespaces should only store the settings for later use:

```
318 \bool_set_false:N\l__tag_role_update_bool
319 \__tag_role_read_namespace:n {latex-inline}
320 \__tag_role_read_namespace:n {latex-book}
321 \bool_set_true:N\l__tag_role_update_bool
322 \__tag_role_read_namespace:n {latex}
323 \__tag_role_read_namespace:nn {latex} {latex-lab}
324 \__tag_role_read_namespace:n {pdf}
325 \__tag_role_read_namespace:n {pdf2}
```

But is the class provides a `\chapter` command then we switch

```
326 \pdf_version_compare:NnTF < {2.0}
327   {
328     \hook_gput_code:nnn {begindocument}{tagpdf}
329       {
330         \cs_if_exist:NT \chapter
331           {
332             \prop_map_inline:cn{g__tag_role_NS_latex-book_prop}
333               {
334                 \__tag_role_add_tag:ne {#1}{\use_i:nn #2\c_empty_tl\c_empty_tl}
335               }
336           }
337       }
338   }
339   {
340     \hook_gput_code:nnn {begindocument}{tagpdf}
341       {
342         \cs_if_exist:NT \chapter
343           {
344             \prop_map_inline:cn{g__tag_role_NS_latex-book_prop}
```

```
345              {
346                  \prop_gput:Nnn \g__tag_role_tags_NS_prop    { #1 }{ latex-book }
347              }
348          }
349      }
350  }
```

1.6 Parent-child rules

PDF define various rules about which tag can be a child of another tag. The following code implements the matrix to allow to use it in tests.

\g__tag_role_parent_child_intarray   This intarray will store the rule as a number. For parent nm and child ij (n,m,i,j digits) the rule is at position nmij. As we have around 56 tags, we need roughly a size 6000.

```
351  \intarray_new:Nn \g__tag_role_parent_child_intarray {6000}
```

(*End of definition for* \g__tag_role_parent_child_intarray.)

\c__tag_role_rules_prop   These two properties map the rule strings to numbers and back. There are in tagpdf-
\c__tag_role_rules_num_prop   data.dtx near the csv files for easier maintenance.

(*End of definition for* \c__tag_role_rules_prop *and* \c__tag_role_rules_num_prop.)

__tag_store_parent_child_rule:nnn   The helper command is used to store the rule. It assumes that parent and child are given as 2-digit number!

```
352  \cs_new_protected:Npn \__tag_store_parent_child_rule:nnn #1 #2 #3 % num parent, num child, #3
353      {
354          \intarray_gset:Nnn \g__tag_role_parent_child_intarray
355              { #1#2 }{0\prop_item:Nn\c__tag_role_rules_prop{#3}}
356      }
```

(*End of definition for* __tag_store_parent_child_rule:nnn.)

1.6.1 Reading in the csv-files

This counter will be used to identify the first (non-comment) line

```
357  \int_zero:N  \l__tag_tmpa_int
```

Open the file depending on the PDF version

```
358  \pdf_version_compare:NnTF < {2.0}
359      {
360          \ior_open:Nn \g_tmpa_ior {tagpdf-parent-child.csv}
361      }
362      {
363          \ior_open:Nn \g_tmpa_ior {tagpdf-parent-child-2.csv}
364      }
```

Now the main loop over the file

```
365  \ior_map_inline:Nn \g_tmpa_ior
366      {
```

ignore lines containing only comments

```
367      \tl_if_empty:nF{#1}
368          {
```

count the lines ...

```
369          \int_incr:N\l__tag_tmpa_int
```

put the line into a seq. Attention! empty cells are dropped.

```
370          \seq_set_from_clist:Nn\l__tag_tmpa_seq { #1 }
371          \int_compare:nNnTF {\l__tag_tmpa_int}=1
```

This handles the header line. It gives the tags 2-digit numbers

```
372            {
373              \seq_map_indexed_inline:Nn \l__tag_tmpa_seq
374                {
375                  \prop_gput:Nnx\g__tag_role_index_prop
376                    {##2}
377                    {\int_compare:nNnT{##1}<{10}{0}##1}
378                }
379            }
```

now the data lines.

```
380            {
381              \seq_set_from_clist:Nn\l__tag_tmpa_seq { #1 }
```

get the name of the child tag from the first column

```
382              \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_tl
```

get the number of the child, and store it in `\l__tag_tmpb_tl`

```
383              \prop_get:NVN \g__tag_role_index_prop \l__tag_tmpa_tl \l__tag_tmpb_tl
```

remove column 2+3

```
384              \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_tl
385              \seq_pop_left:NN\l__tag_tmpa_seq\l__tag_tmpa_tl
```

Now map over the rest. The index `##1` gives us the number of the parent, `##2` is the data.

```
386              \seq_map_indexed_inline:Nn \l__tag_tmpa_seq
387                {
388                  \exp_args:Nnx
389                  \__tag_store_parent_child_rule:nnn {##1}{\l__tag_tmpb_tl}{ ##2 }
390                }
391            }
392        }
393    }
```

close the read handle.

```
394  \ior_close:N\g_tmpa_ior
```

The Root, Hn and mathml tags are special and need to be added explicitly

```
395  \prop_get:NnN\g__tag_role_index_prop{StructTreeRoot}\l__tag_tmpa_tl
396  \prop_gput:Nnx\g__tag_role_index_prop{Root}{\l__tag_tmpa_tl}
397  \prop_get:NnN\g__tag_role_index_prop{Hn}\l__tag_tmpa_tl
398  \pdf_version_compare:NnTF < {2.0}
399    {
400      \int_step_inline:nn{6}
401        {
402          \prop_gput:Nnx\g__tag_role_index_prop{H#1}{\l__tag_tmpa_tl}
403        }
404    }
405    {
```

```
406        \int_step_inline:nn{10}
407          {
408            \prop_gput:Nnx\g__tag_role_index_prop{H#1}{\l__tag_tmpa_tl}
409          }
```

all mathml tags are currently handled identically

```
410        \prop_get:NnN\g__tag_role_index_prop {mathml}\l__tag_tmpa_tl
411        \prop_get:NnN\g__tag_role_index_prop {math}\l__tag_tmpb_tl
412        \prop_map_inline:Nn \g__tag_role_NS_mathml_prop
413          {
414            \prop_gput:NnV\g__tag_role_index_prop{#1}\l__tag_tmpa_tl
415          }
416        \prop_gput:NnV\g__tag_role_index_prop{math}\l__tag_tmpb_tl
417    }
```

1.6.2 Retrieving the parent-child rule

_tag_role_get_parent_child_rule:nnnN   This command retrieves the rule (as a number) and stores it in the tl-var. It assumes that the tag in #1 is a standard tag after role mapping for which a rule exist and is *not* one of Part, Div, NonStruct as the real parent has already been identified. #3 can be used to pass along data about the original tags and is only used in messages.

TODO check temporary variables. Check if the tl-var should be fix.

```
418  \tl_new:N \l__tag_parent_child_check_tl
419  \cs_new_protected:Npn \__tag_role_get_parent_child_rule:nnnN #1 #2 #3 #4
420    % #1 parent (string) #2 child (string) #3 text for messages (eg. about Div or Rolemapping)
421    % #4 tl for state
422    {
423        \prop_get:NnN \g__tag_role_index_prop{#1}\l__tag_tmpa_tl
424        \prop_get:NnN \g__tag_role_index_prop{#2}\l__tag_tmpb_tl
425        \bool_lazy_and:nnTF
426          { ! \quark_if_no_value_p:N \l__tag_tmpa_tl }
427          { ! \quark_if_no_value_p:N \l__tag_tmpb_tl }
428          {
```

Get the rule from the intarray

```
429            \tl_set:Nx#4
430              {
431                \intarray_item:Nn
432                \g__tag_role_parent_child_intarray
433                {\l__tag_tmpa_tl\l__tag_tmpb_tl}
434              }
```

If the state is something is wrong ...

```
435            \int_compare:nNnT
436              {#4} = {\prop_item:Nn\c__tag_role_rules_prop{}}
437              {
438                %warn ?
```

we must take the current child from the stack if is already there, depending on location the check is called, this could also remove the parent, but that is ok too.

```
439              }
```

This is the message, this can perhaps go into debug mode.

```
440            \group_begin:
441            \int_compare:nNnT {\l__tag_tmpa_int*\l__tag_loglevel_int} > { 0 }
442              {
443                \prop_get:NVNF\c__tag_role_rules_num_prop #4 \l__tag_tmpa_tl

469          }
470    }
471  \cs_generate_variant:Nn\__tag_role_get_parent_child_rule:nnnN {VVVN,VVnN}
```

(*End of definition for* __tag_role_get_parent_child_rule:nnnN.)

__tag_check_parent_child:nnnnN   This commands translates rolemaps its arguments and then calls __tag_role_get_-
parent_child_rule:nnnN. It does not try to resolve inheritance of Div etc but instead
warns that the rule can not be detected in this case. In pdf 2.0 the name spaces of the
tags are relevant, so we have arguments for them, but in pdf <2.0 they are ignored and
can be left empty.

```
472  \pdf_version_compare:NnTF < {2.0}
473    {
474    \cs_new_protected:Npn \__tag_check_parent_child:nnnnN #1 #2 #3 #4 #5
475    %#1 parent tag,#2 NS, #3 child tag, #4 NS, #5 tl var
476      {
```

for debugging messages we store the arguments.

```
477          \prop_put:Nnn \l__tag_role_debug_prop {parent} {#1}
478          \prop_put:Nnn \l__tag_role_debug_prop {child}  {#3}
```

get the standard tags through rolemapping if needed at first the parent

```
479          \prop_get:NnNTF \g__tag_role_index_prop {#1}\l__tag_tmpa_tl
480            {
```

```
481         \tl_set:Nn \l__tag_tmpa_tl {#1}
482       }
483       {
484         \prop_get:NnNF \g__tag_role_rolemap_prop {#1}\l__tag_tmpa_tl
485           {
486             \tl_set:Nn \l__tag_tmpa_tl {\q_no_value}
487           }
488       }
```

now the child

```
489       \prop_get:NnNTF \g__tag_role_index_prop {#3}\l__tag_tmpb_tl
490         {
491           \tl_set:Nn \l__tag_tmpb_tl {#3}
492         }
493         {
494           \prop_get:NnNF \g__tag_role_rolemap_prop {#3}\l__tag_tmpb_tl
495             {
496               \tl_set:Nn \l__tag_tmpb_tl {\q_no_value}
497             }
498         }
```

if we got tags for parent and child we call the checking command

```
499       \bool_lazy_and:nnTF
500         { ! \quark_if_no_value_p:N \l__tag_tmpa_tl }
501         { ! \quark_if_no_value_p:N \l__tag_tmpb_tl }
502         {
503           \__tag_role_get_parent_child_rule:VVnN
504             \l__tag_tmpa_tl \l__tag_tmpb_tl
505             {Rolemapped~from:~'#1'~-->~'#3'}
506             #5
507         }
508         {
509           \tl_set:Nn #5 {0}
510           \msg_warning:nnxxx
511             { tag }
512             {role-parent-child}
513             { #1 }
514             { #3 }
515             { unknown! }
516         }
517     }
518   \cs_new_protected:Npn \__tag_check_parent_child:nnN #1#2#3
519     {
520       \__tag_check_parent_child:nnnnN {#1}{}{#2}{}#3
521     }
522 }
```

and now the pdf 2.0 version The version with three arguments retrieves the default names space and then calls the full command. Not sure if this will ever be needed but we leave it for now.

```
523   {
524   \cs_new_protected:Npn \__tag_check_parent_child:nnN #1 #2 #3
525     {
526       \prop_get:NnN\g__tag_role_tags_NS_prop {#1}\l__tag_role_tag_namespace_tmpa_tl
527       \prop_get:NnN\g__tag_role_tags_NS_prop {#2}\l__tag_role_tag_namespace_tmpb_tl
```

158

```
528        \str_if_eq:nnT{#2}{MC}{\tl_clear:N \l__tag_role_tag_namespace_tmpb_tl}
529        \bool_lazy_and:nnTF
530          { ! \quark_if_no_value_p:N \l__tag_role_tag_namespace_tmpa_tl }
531          { ! \quark_if_no_value_p:N \l__tag_role_tag_namespace_tmpb_tl }
532          {
533            \__tag_check_parent_child:nVnVN
534              {#1}\l__tag_role_tag_namespace_tmpa_tl
535              {#2}\l__tag_role_tag_namespace_tmpb_tl
536              #3
537          }
538          {
539            \tl_set:Nn #3 {0}
540            \msg_warning:nnxxx
541              { tag }
542              {role-parent-child}
543              { #1 }
544              { #2 }
545              { unknown! }
546          }
547      }
```

and now the real command.

```
548      \cs_new_protected:Npn \__tag_check_parent_child:nnnnN #1 #2 #3 #4 #5 %tag,NS,tag,NS, tl var
549        {
550          \prop_put:Nnn \l__tag_role_debug_prop {parent} {#1/#2}
551          \prop_put:Nnn \l__tag_role_debug_prop {child}  {#3/#4}
```

If the namespace is empty, we assume a standard tag, otherwise we retrieve the rolemapping from the namespace

```
552          \tl_if_empty:nTF  {#2}
553            {
554              \tl_set:Nn \l__tag_tmpa_tl {#1}
555            }
556            {
557              \prop_get:cnNTF
558                { g__tag_role_NS_#2_prop }
559                {#1}
560                \l__tag_tmpa_tl
561                {
562                  \tl_set:Nx \l__tag_tmpa_tl {\tl_head:N\l__tag_tmpa_tl}
563                  \tl_if_empty:NT\l__tag_tmpa_tl
564                    {
565                      \tl_set:Nn \l__tag_tmpa_tl {#1}
566                    }
567                }
568                {
569                  \tl_set:Nn \l__tag_tmpa_tl {\q_no_value}
570                }
571            }
```

and the same for the child If the namespace is empty, we assume a standard tag, otherwise we retrieve the rolemapping from the namespace

```
572          \tl_if_empty:nTF  {#4}
573            {
574              \tl_set:Nn \l__tag_tmpb_tl {#3}
```

```
575                    }
576                    {
577                       \prop_get:cnNTF
578                         { g__tag_role_NS_#4_prop }
579                         {#3}
580                         \l__tag_tmpb_tl
581                         {
582                            \tl_set:Nx \l__tag_tmpb_tl { \tl_head:N\l__tag_tmpb_tl }
583                            \tl_if_empty:NT\l__tag_tmpb_tl
584                              {
585                                 \tl_set:Nn \l__tag_tmpb_tl {#3}
586                              }
587                         }
588                         {
589                            \tl_set:Nn \l__tag_tmpb_tl {\q_no_value}
590                         }
591                    }
```
and now get the relation
```
592            \bool_lazy_and:nnTF

(*End of definition for* `\tag_check_child:nnTF`. *This function is documented on page 143.*)

1.7   Remapping of tags

In some context it can be necessary to remap or replace the tags. That means instead of tag=H1 or tag=section one wants the effect of tag=Span. Or instead of tag=P one wants tag=Code.

The following command provide some general interface for this. The core idea is that before a tag is set it is fed through a function that can change it. We want to be able to chain such functions, so all of them manipulate the same variables.

`\l__tag_role_remap_tag_tl`
`\l__tag_role_remap_NS_tl`

```
633  \tl_new:N \l__tag_role_remap_tag_tl
634  \tl_new:N \l__tag_role_remap_NS_tl
```

(*End of definition for* `\l__tag_role_remap_tag_tl` *and* `\l__tag_role_remap_NS_tl`.)

`\__tag_role_remap:`   This function is used in the structure and the mc code before using a tag. By default it does nothing with the tl vars. Perhaps this should be a hook?

```
635  \cs_new_protected:Npn \__tag_role_remap: {  }
```

(*End of definition for* `\__tag_role_remap:`.)

`\__tag_role_remap_id:`   This is copy in case we have to restore the main command.

```
636  \cs_set_eq:NN \__tag_role_remap_id: \__tag_role_remap:
```

(*End of definition for* `\__tag_role_remap_id:`.)

`\__tag_role_remap_inline:`   The mapping is meant to "degrade" tags, e.g. if used inside some complex object. The pdf<2.0 code maps the tag to the new role, the pdf 2.0 code only switch the NS.

```
637  \pdf_version_compare:NnTF < {2.0}
638    {
639      \cs_new_protected:Npn \__tag_role_remap_inline:

(*End of definition for* tag (rolemap-key) *and others. These functions are documented on page* *143.*)

Part X

The **tagpdf-space** module
Code related to real space chars
Part of the tagpdf package

This key allows to activate/deactivate the real space chars if the engine supports it. The allowed values are `true`, `on`, `false`, `off`.

This key works only with luatex and shows with small red bars where spaces have been inserted. This is only for debugging and is not completly reliable (and change affect other literals and tagging), so it should be used with care.

```
1  ⟨@@=tag⟩
2  ⟨*header⟩
3  \ProvidesExplPackage {tagpdf-space-code} {2023-08-04} {0.98k}
4   {part of tagpdf - code related to real space chars}
5  ⟨/header⟩
```

1   Code for interword spaces

The code is engine/backend dependant. Basically only pdftex and luatex support real space chars. Most of the code for luatex which uses attributes is in the lua code, here are only the keys.

interwordspace␣(setup-key)
show-spaces␣(setup-key)
```
6  ⟨*package⟩
7  \keys_define:nn { __tag / setup }
