2 Introduction

This file contains all the macros for typesetting *TUGboat* with both plain \TeX\ and \LaTeX\ 2 ϵ .

2.1 Summary of control sequences

Abbreviations. Just a listing with indications of expansion where that may not be obvious. For full definitions, see real code below (Section 3.4).

\AllTeX	(\La)TeX
\AMS	American Mathematical Society
\AmSTeX	
\aw	A-W (abbreviation for Addison-Wesley)
\API	
\AW	Addison-Wesley

\VorTeX	
\XeT	
\XeTeX	reflected and lowered first ‘E’
\XeLaTeX	with extra space before ‘L’
\XML	
\WEB	
\WEAVE	
\WYSIWYG	

Macros for things that are slightly more significant.

\NoBlackBoxes	turns off marginal rules marking overfull boxes
\BlackBoxes	turns them back on
\newline	horizontal glue plus a break
\ifundefined#1	checks argument with \csname against \relax
\topsmash	smashes above baseline (from AMSTeX)
\botsmash	smashes below baseline (from AMSTeX)
\smash	smashes both (from plain)
\ulap	lap upwards
\dlap	lap downwards
\xlap	reference point at center horizontally; 0 width
\ylap	reference point at center vertically; 0 height, depth
\zlap	combination \xlap and \ylap
\basezero	to avoid insertion of baselineskip and lineskip glue
\nullhrule	empty \hrule
\nullvrule	empty \vrule
\makestrut[#1;#2]	ad hoc struts; #1=height, #2=depth
\today	today’s date
\SetTime	converts \time to hours, minutes
\now	displays time in hours and minutes
\Now	shows current date and time
\ifPrelimDraft	flag to indicate status as preliminary draft

\rttitle	<i>TUGboat</i> volume and number info for running head
\midrttitle	information for center of running head
\rtitlenexttopage	next to page number in running head
\HorzR@gisterRule	pieces of registration marks ('trimmarks')
\DownShortR@gisterRule	
\UpShortR@gisterRule	
\ttopregister	top registration line with 'T' in center
\tbotregister	bottom registration line with inverted 'T' in center
\topregister	register actually used
\botregister	
\raggedskip	
\raggedstretch	
\raggedparfill	
\raggedspaces	
\raggedright	
\raggedleft	
\raggedcenter	
\normalspaces	
\raggedbottom	
\bull	square bullet
\cents	'cents' sign
\Dag	superscripted dagger
\careof	c/o
\sfrac	slashed fraction (arguments optionally separated by a slash)
\cs	control sequence name
\env	\cs{name}→\name
\meta	environment name
\dash	\env{name}→\begin{name}
\Dash	meta-argument name
\hyph	\meta{name}→⟨name⟩
\slash	en-dash surrounded by thinspace; only breakable AFTER
\nth	em-dash, as above
\tubissue	permit automatic hyphenation after an actual hyphen
\xEdNote	'breakable' slash
\Review:	for obtaining '1 st ', '2 nd ', 3 rd , etc.
\reviewitem	gets \TUB followed by volume and issue numbers
\revauth	Editor's Note:
\revtitle	Review: (for title of book review article)
\revpubinfo	begin data for item being reviewed
\endreviewitem	with one argument, author(s) of item being reviewed
	with one argument, title of ...
	with one argument, other info pertaining to ...
	end data for item being reviewed

\titleref	with one argument, format title as straight text (slanted, frenchspacing)
\Input	\input with some other bookkeeping for case where multiple articles are put together
\TBremark	reminder to <i>TUGboat</i> editorial staff
\TBEEnableRemarks	enable \TBremarks (normally suppressed)
\pagexref	used to write out page numbers to screen and external files
\pagexrefON	
\pagexrefOFF	
\xrefeto	used for symbolic cross-reference to other pages in <i>TUGboat</i>
\xrefetoON	
\xrefetoOFF	
\TBdriver	marks code which only takes effect when articles are run together in a driver file
\signaturemark	items for signatures
\signaturewidth	

3 L^AT_EX 2 _{ε} *TUGboat* class file

3.1 Setup and options

Occasionally we need to do different things when running under traditional (pdf)latex or a native Unicode engine. Since we don't need any fancier distinctions, instead of reading the `iftex` or another package, do the test directly.

```
19 <*common>
20 \newif\ifTBUncodeengine
21 \ifx\Umathchardef\@thisisundefined % not (xetex|luatex)
22   \TBUncodeenginefalse
23 \else
24   \TBUncodeenginetru
25 \fi
26 </common>
```

Check for reloading. Hmm... Does this happen with L^AT_EX 2 _{ε} classes? Probably, in fact, as well that it doesn't, since the `\tugstyinit` referenced here doesn't exist; however, it's possible that we might need a similar mechanism in the future, so we retain its skeleton, without fleshing out the `\tugstyinit` bones.

```
27 <*ltugboatcls>
28 \csname tugstyloaded@\endcsname
29 \def\tugstyloaded@{\tugstyinit\endinput}
```

Acquire a name for this class if we don't already have one (by virtue of having been loaded by `tugproc.cls`). This name will be used in error messages and the like.

```
30 \providetcommand{\@tugclass}{ltugboat}
```

Warnings/error messages/information messages—if we're using L^AT_EX 2 _{ε} we can use the `\Class*` commands:

```
31 \def\TBInfo{\ClassInfo{\@tugclass}}
32 \def\TBError{\ClassError{\@tugclass}}
33 \def\TBWarning{\ClassWarning{\@tugclass}}
```

```

34 \def\TBWarningNL{\ClassWarningNoLine{@tugclass}}
      Class options: draft vs. preprint vs. final.
35 \DeclareOption{draft}{%
36   % [draft], the default
37   % If the user loads hyperref, avoid passing on the global draft option
38   % (which would remove all links in the pdf).
39   \PassOptionsToPackage{final}{hyperref}
40   %
41   \AtEndOfClass{%
42     \setcounter{page}{901}%
43     \BlackBoxes
44     \def\MakeRegistrationMarks{}%
45     \PrelimDrafttrue
46   }%
47 }
48 \newif\ifpreprint
49 \def\preprint{\preprinttrue} % [preprint], hardly used
50 \DeclareOption{preprint}{%
51   \preprinttrue
52 }
53
54 \newif\iftubfinaloption % [final], manually inserted by us for processing
55 \DeclareOption{final}{%
56   \tubfinaloptiontrue
57   \AtEndOfClass{%
58     % Insert draft date into the header even with [final], if we are not
59     % doing a production run. (tugboat.dates sets up page numbers
60     % above 900 in such pseudo-draft mode.) We use [final] in the first
61     % place for this case because draft vs. final can change page
62     % layout, wrt registration marks, etc. (Not good, but too painful to
63     % change at this late date.)
64     \ifnum\value{page}>900 \PrelimDrafttrue \else \PrelimDraftfalse \fi
65     \tubrunningfull
66   }%
67 }

```

We want to use `hyperref`'s `\texorpdfstring`, e.g., in the `draft` option above. If `hyperref` is not loaded, define our own trivial fallback to expand to the `TEX` (first) argument.

Similarly, disable and more if we have `hyperref`, so section titles using them don't cause useless warnings.

```

68 \AtBeginDocument{%
69   \ifx\undefined\texorpdfstring
70     \DeclareRobustCommand{\texorpdfstring}[2]{#1}%
71   \fi
72   %
73   \ifx\undefined\pdfstringdefDisableCommands\else
74     \pdfstringdefDisableCommands{%
75       \let\acro\relax
76       \let\origDash=\Dash \def\Dash{\texorpdfstring{\origDash}{--}}%
77       % lots more could/should be added.
78     }%
79   \fi

```

```

80 }

TUGboat uses only 10pt for the main text.

81 \DeclareOption{11pt}{%
82   \TBTWarning{The \@tugclass\space class only supports 10pt fonts:}%
83   \MessageBreak option \CurrentOption\space ignored}%
84 }
85 \DeclareOption{12pt}{\csname ds@11pt\endcsname}

Similarly, ignore one/two-side options.

86 \DeclareOption{oneside}{\TBTWarning{Option \CurrentOption\space ignored}}
87 \DeclareOption{twoside}{\ds@oneside}

There are these people who seem to think tugproc is an option rather than a
class... (Note that it's already been filtered out if we were calling from ltugproc.)

88 \DeclareOption{tugproc}{%
89   \TBTWarning{Option \CurrentOption\space ignored: use class ltugproc
90   instead of \@tugclass}%
91 }

Option rawcite (the default) specifies the default citation mechanism (as
built-in to LATEX); option harvardcite specifies the author-date citation mecha-
nism defined in section 3.24 below.

92 \DeclareOption{rawcite}{\let\if@Harvardcite\iffalse}
93 \DeclareOption{harvardcite}{\let\if@Harvardcite\iftrue}

Option extralabel (the default) specifies that the publication years of two
successive references with otherwise identical labels will be tagged with distin-
guishing letters; option noextralabel causes those letters to be suppressed. Note
that (a) no two references will in any case have the same labels in the default
(plain) rawcite setup, and that (b) the distinguishing letters appear in the labels
themselves; the reader can work out the correspondence one with the other...

94 \DeclareOption{extralabel}{\let\UseExtraLabel\@firstofone}
95 \DeclareOption{noextralabel}{\let\UseExtraLabel\@gobble}

The section-numbering style, so that we can allow the same heading layout
as in the plain macros.

96 \DeclareOption{numbersec}{\let\if@numbersec\iftrue}
97 \DeclareOption{nonumber}{\let\if@numbersec\iffalse}

Minimal running headers/footers contain just the TUGboat volume/issue
identification and page numbers. ‘runningfull’ is the default, and includes title
and author. ‘runningoff’ makes both headers and footers empty.

98 \DeclareOption{runningoff}{\AtEndOfClass{\@tubrunningoff}}
99 \DeclareOption{runningminimal}{\AtEndOfClass{\@tubrunningminimal}}
100 \DeclareOption{runningfull}{\AtEndOfClass{\@tubrunningfull}}

Usually we want to print the doi if [final], else not. But sometimes we want
to omit it even if [final], namely when we're posting a review or other item early.

101 \newif\iftubomitdoiption
102 \DeclareOption{omitdoi}{%
103   \tubomitdoiptiontrue
104 }

```

\if@tubtwocolumn Occasionally (tb107jackowski, and past conference preprints), we need the option `onecolumn`. For alternative approaches to one-column articles, see tb92hagen-euler and tb78milo.

```
105 \newif\if@tubtwocolumn \tubtwocolumntrue
106 \DeclareOption{onecolumn}{\tubtwocolumnfalse}
```

\ifsecondcolstart Occasionally, we need to start an article in the second column of a page, due to splicing with a previous article. Let's try declaring that. Then, before `\maketitle`, we'll force the move to the second column.

And sometimes we need to add space at the top of that second column (e.g., tb136lettre); there's no way to intervene in the article source, so define a hook `\tubsecondcolstartextra`.

```
107 \newif\iftubsecondcolstart
108 \DeclareOption{secondcolstart}{\tubsecondcolstarttrue}
109 \let\tubsecondcolstartextra\relax
```

Any other options, we pass on to `article.cls` before we load it:

```
110 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{article}}
```

Request default options (draft mode, standard citation, numbered sections, etc.), process all options, and then get the base document class on top of which we reside, namely `article`. Always call `article` with the `twoside` option, since we want the ability to have odd/even headers/footers.

```
111 \ExecuteOptions{draft,extralabel,numbersec,rawcite,runningminimal}
112 \ProcessOptions
113 \LoadClass[twoside]{article}
```

Various fonts used throughout. Some effort has been made to suppress these things with explicit sizes in the macro name (`\tensl` is an example below), but keeping in step with the documentation is one thing that restricts such a move.

```
114 \def\sectitlefont{\fontfamily{sfdefault}\fontseries{bx}\fontshape{n}%
115           \fontsize@\xviipt\stbaselineskip\selectfont}
116 \def\tensl{\fontseries{m}\fontshape{sl}\fontsize@\xpt\xiipt
117           \selectfont}
```

This font selection command is used *only* for the ‘Editor’s Note’ introduction to notes; sadly it makes explicit reference to CMR, and Barbara Beeton has agreed that the reference may be constructed to use the current family such that, if no upright italic is defined, ordinary italics are used. A project for later...

```
118 \ifTBunicodeengine
119   % there is no "LM unslanted" in OpenType, so use the standard cmu
120   % scaled for the current text size. Not worth more effort.
121   \def\EdNoteFont{\font\ednotefont = cmu10 at 1em }
122 \else % traditional engine:
123   \def\EdNoteFont{\fontfamily{cmr}\fontseries{m}\fontshape{ui}\selectfont}
124 \fi
125 
```

If Ulrik Vieth’s `mflogo.sty` is around, we’ll use it. Otherwise (pro tem, at least) we’ll warn the user and define the absolute minimum of machinery that *TUGboat* requires (that which was used prior to the invention of L^AT_EX 2 _{ε}).

```
126 <*common>
```

```

127 \IfFileExists{mflogo.sty}%
128   {\RequirePackage{mflogo}}%

149     <->ssub*logo/m/sl%
150   }{}%
151 }

```

3.2 Resetting at start of paper

`\ResetCommands` We store a set of commands that should be executed at the start of each paper, `\AddToResetCommands` before any paper-specific customisation. These commands (stored in the token `\StartNewPaper` register `\ResetCommands`) include things such as resetting section and footnote numbers, re-establishing default settings of typesetting parameters, and so on. The user (or more typically, editor) may execute the commands by using the command `\StartNewPaper`. Things I've not yet thought of may be added to the list of commands, by

```

152 \newtoks\ResetCommands
153 \ResetCommands{%
154   \setcounter{part}{0}%
155   \setcounter{section}{0}%
156   \setcounter{footnote}{0}%
157   \authornumber\z@
158 }
159 \newcommand{\AddToResetCommands}[1]{%
160   \AddToResetCommands\expandafter{\AddToResetCommands#1}%
161 }

```

3.3 Helpful shorthands (common code with Plain styles)

`\makeescape`, ..., `\makecomment` allow users to change the category code of a single character a little more easily. These require that the character be addressed as a control sequence: e.g., `\makeescape{/}` will make `'/'` an escape character.

```
162 <*!l@tex>
```

```

163 \def\makeescape#1{\catcode`#1=0 }
164 \def\makebgroup#1{\catcode`#1=1 }
165 \def\makeegroup#1{\catcode`#1=2 }
166 \def\makemath #1{\catcode`#1=3 }
167 <!--tex>
168 <--tex>
169 \def\makeescape#1{\catcode`#1=\z@}
170 \def\makebgroup#1{\catcode`#1=@ne}
171 \def\makeegroup#1{\catcode`#1=\tw@}
172 \def\makemath #1{\catcode`#1=thr@@}
173 </tex>
174 \def\makealign #1{\catcode`#1=4 }
175 \def\makeeol #1{\catcode`#1=5 }
176 \def\makeparam #1{\catcode`#1=6 }
177 \def\makesup #1{\catcode`#1=7 }
178 \def\makesub #1{\catcode`#1=8 }
179 \def\makeignore#1{\catcode`#1=9 }
180 \def\makespace #1{\catcode`#1=10 }
181 \def\makeletter#1{\catcode`#1=11 }
182 \chardef\other=12
183 \let\makeother\@makeother
184 \def\makeactive#1{\catcode`#1=13 }
185 \def\makecomment#1{\catcode`#1=14 }

\savecat#1 and \restorecat#1 will save and restore the category of a given
character. These are useful in cases where one doesn't wish to localize the settings
and therefore be required to globally define or set things.

186 \def\savecat#1{%
187   \expandafter\xdef\csname\string#1\endcsname{\the\catcode`#1}
188 \def\restorecat#1{\catcode`#1=\csname\string#1\endcsname}
189 <!--tex>\savecat\@%
190 <!--tex>\makeletter\@%

```

\SaveCS#1 and \RestoreCS#1 save and restore ‘meanings’ of control sequences. Again this is useful in cases where one doesn’t want to localize or where global definitions clobber a control sequence which is needed later with its ‘old’ definition.

```

191 \def\SaveCS#1{\expandafter\let\csname saved@@#1\expandafter\endcsname
192   \csname#1\endcsname}
193 \def\RestoreCS#1{\expandafter\let\csname#1\expandafter\endcsname
194   \csname saved@@#1\endcsname}

```

To distinguish between macro files loaded

```

195 \def\plaintubestyle{plain}
196 \def\latextubestyle{latex}

```

Control sequences that were first defined in L^AT_EX 2_E of 1995/06/01 (or later), but which we merrily use. Only define if necessary:

```

197 \providecommand\hb@xt@{\hbox to}
198 \providecommand\textsuperscript[1]{\ensuremath{\m@th
199   ^{\mbox{\scriptsize\sf@size}\z@}}}
200   \selectfont #1}}}

```

(Note that that definition of \textsuperscript isn’t robust, but probably doesn’t need to be... What’s more, it doesn’t appear in the mythical 2.09 version of the package.)

We end up wanting this fairly often, and L^AT_EX removed \line.

```
201 \def\tubline{\hbox to \hsize}
```

3.4 Abbreviations and logos

Font used for the METAFONT logo, etc.

```
202 \DeclareRobustCommand{\AllTeX}{%

XeTeX requires reflecting the first E, hence we complain if the graphics package is not present. (For plain documents, this can be loaded via `miniltx` or `Eplain`.) Also, at Barbara's suggestion, if the current font is slanted, we rotate by 180 instead of reflecting so there is a better chance to look ok. (The magic values here seem more or less ok for `cmsl` and `cmti`.)

\tubsentence Occasionally, notably after citations that need to come after a sentence-ending period, we want to tell TeX that it's still at the end of a sentence. As in: ... whatever. \cite{foo}\tubsentence This happens when, e.g., the reference applies to more than the final sentence. Also can be needed when \c@ cannot be used because the sentence-ending punctuation itself occurs inside a control sequence that prevents it.

```
473 \def\tubsentence{\spacefactor=3000{}\space\ignorespaces}
```

Latin Modern and many other fonts irritatingly make the Unicode ellipsis character (U+2026) a single character's width, typically more squashed together than three period characters. This just looks wrong. It is too painful to try to redefine in general, but provide the normal definition to reset in individual papers with, e.g.: \ifx\tubdots\undefined \else \let\ dots\tubdots \let\ldots\tubdots \fi

\allowhyphens Hyphen control: first, we save (via \edef) the hyphenpenalties in \allowhyphens. This allows us to permit hyphens temporarily in things like \netaddresses, which typically occur when \raggedright is set, but which need to be allowed to break at their artificial discretionaries.

```

474 \edef\allowhyphens{\noexpand\hyphenpenalty\the\hyphenpenalty\relax

3.6 Utility registers and definitions

We define a few scratch registers (and the like) for transient use; they're all paired: an internal one (`\T@st*`) and an external one (`\Test*`).

Comment: Exercise for an idle day: find whether all these are necessary, or whether we can use the L^AT_EX temporaries for some (or all) of the `\T@st*` ones.

Comment: (bb) All these registers are used in the plain version, `tugboat.sty`.

```
477 \newbox\T@stBox          \newbox\TestBox
478 \newcount\T@stCount      \newcount\TestCount
479 \newdimen\T@stDimen       \newdimen\TestDimen
480 \newif\ifT@stIf          \newif\ifTestIf
```

Control sequence existence test, stolen from T_EXbook exercise 7.7 (note that this provides functionality that in some sense duplicates something within L^AT_EX).

```
481 \def\ifundefined#1{\expandafter\ifx\csname#1\endcsname\relax }
```

L^AT_EX conventions which are also useful here.

```

3.7 Ragged right and friends

\raggedskip Plain *TeX*'s definition of \raggedright doesn't permit any stretch, and results in \raggedstretch too many overfull boxes. We also turn off hyphenation. This code lies somewhere \raggedparfill between that of Plain *TeX* and of *L^ATeX*.

```

\raggedspaces 532 \newdimen\raggedskip    \raggedskip=\z@
533 \newdimen\raggedstretch \raggedstretch=5em    % ems of font set now (10pt)
534 \newskip\raggedparfill \raggedparfill=\z@\@plus 1fil
535 \def\raggedspaces{\spaceskip=.3333em \relax \xspaceskip=.5em \relax }

```

\raggedright Some applications may have to add stretch, in order to avoid all overfull boxes.

\raggedleft We define the following uses of the above skips, etc.

```

\raggedcenter 536 \def\raggedright{%
\ normalspaces 537 \nohyphens \raggedspaces
538 \rightskip=\raggedskip\@plus\raggedstretch
539 \parfillskip=\raggedparfill
540 }
541 \def\raggedleft{%

```

558 \def\tubjustifiedpar{\rightskip=0pt \parfillskip=0pt plusifil
559   \allowhyphens \normalspaces}

```

3.8 Assorted user-level markup

L^AT_EX 2 _{ε} defines a robust \~, we provide a new definition of ~ by redefining \~ (\DeclareRobustCommand doesn't mind redefinition, fortunately). This is based on the version in AMS-T_EX—the L^AT_EX 2 _{ε} version (`ltspace.dtx`) has \leavevmode and does not do anything with the surrounding space(s). Our version messes up with the \pfill used in doc-generated indexes (github.com/latex3/latex2e/issues/75), but later (2018++) versions of doc should be protected against our redefinition.

```

560 \let\latexnobreakspace=\nobreakspace
561 \DeclareRobustCommand{\nobreakspace}{\unskip\nobreak\ignorespaces}

```

Plain T_EX defines \newbox as \outer. We solemnly preserve the following, which removes the \outerness; of course, we carefully exclude it from what we generate... (\outerness is a spawn of the devil, is it not? Barbara Beeton responded to the previous sentence “\outerness has its place: it avoids register buildup, hence running out of memory”. In another context, David Carlisle remarked that an error control mechanism that causes more confusing errors than it prevents is rather a poor one. This is perhaps not the place to conduct a serious debate...)

3.10 Dates, volume and issue numbers, etc.

Dates and other items which identify the volume and issue. `\issueseqno` is a sequential issue number starting from the first issue published; volume 15,4 has `\issueseqno=45`.

```

\vol 19, 1.
To use: \issdate March 1998.
\issueseqno=58

```

Starting with volume 23 (nominal 2002), we have `\issyear` instead of `\issdate`, because issues don't have months any more.

For production, these are set in a separate file, `tugboat.dates`, which is issue-specific.

```

755 \newcount\issueseqno \issueseqno=-1

```

In L^AT_EX 2 _{ε} , `twoside` option is forced on when `article.cls` is loaded.

3.12 Messing about with the L^AT_EX logo

Barbara Beeton's pleas for L^AT_EX logos that look right in any font shape provoked me to generate the following stuff that is configurable.

Here's the command for the user to define a new version. The arguments are font family, series and shape, and then the two kern values used in placing the raised 'A' of L^AT_EX.

```

945 \newcommand{\DeclareLaTeXLogo}[5]{\expandafter\def
946   \csname @LaTeX@#1/#2/#3\endcsname{{#4}{#5}}}

```

The default values are as used in the source of L^AT_EX itself:

```

947 \def\@LaTeX@default{{.36}{.15}}

```

More are defined in the initial version, for bold CM sans (which is used as `\SectTitleFont`), and CM italic medium and bold, and Bitstream Charter (which Nelson Beebe likes to use). Duplicate for Latin Modern.

```

948 \DeclareLaTeXLogo{cmss}{bx}{n}{.3}{.15}
949 \DeclareLaTeXLogo{lmss}{bx}{n}{.3}{.15}
950 %
951 \DeclareLaTeXLogo{cmr}{m}{it}{.29}{.2}
952 \DeclareLaTeXLogo{lmr}{m}{it}{.29}{.2}
953 %
954 \DeclareLaTeXLogo{cmr}{m}{s1}{.29}{.15}
955 \DeclareLaTeXLogo{lmr}{m}{s1}{.29}{.15}
956 %
957 \DeclareLaTeXLogo{cmr}{bx}{it}{.29}{.2}
958 \DeclareLaTeXLogo{lmr}{bx}{it}{.29}{.2}
959 %
960 \DeclareLaTeXLogo{cmr}{bx}{s1}{.29}{.2}
961 \DeclareLaTeXLogo{lmr}{bx}{s1}{.29}{.2}
962 %
963 \DeclareLaTeXLogo{bch}{m}{n}{.2}{.08}
964 \DeclareLaTeXLogo{bch}{m}{it}{.2}{.08}

```

Redefine `\LaTeX` to choose the parameters for the current font, or to use the default value otherwise:

```

965 \ DeclareRobustCommand{\LaTeX}{\expandafter\let\expandafter\reserved@a
966   \csname @LaTeX@\f@family/\f@series/\f@shape\endcsname
967   \ifx\reserved@a\relax\let\reserved@a\@LaTeX@default\fi
968   \expandafter\@LaTeX\reserved@a}

```

Here's the body of what was originally \LaTeX, pulled out with its roots dripping onto the smoking ruin of original L^AT_EX, and then bits stuck in on the side.

\@LaTeX@default provides parameters as one finds in the original; other versions are added as needed.

```

969 \newcommand{\@LaTeX}[2]{%
970   \%wlog{latex logo family=\f@family/\f@series/\f@shape -> #1, #2.}%
971   L\kern-#1em
972   {\sbox\z@\kern-#1em
973    \vbox to\ht0{\hbox{$\m@th$%
974      \csname S@\f@size\endcsname
975      \fontsize\sf@size\z@
976      \math@fontsfalse\selectfont
977      A}%
978    \vss}%
979  }%
980  \kern-#2em%
981  \TeX}

```

3.13 Authors, contributors, addresses, signatures

An article may have several authors (of course), so we permit an \author command for each of them. The names are then stored in a set of \csnames called \author1, \author2, ... Similarly, there are several \address<n> and \netaddress<n> and \PersonalURL<n> and \ORCID<n> commands set up for each article.

Comment: I would like to make provision for several authors at the same address, but (short of preempting the * marker, which it would be nice to retain so as to preserve compatibility with the plain style) I'm not sure how one would signal it.

```

982 \def\theauthor#1{\csname theauthor#1\endcsname}
983 \def\theaddress#1{\csname theaddress#1\endcsname}
984 \def\thenetaddress#1{\csname thenetaddress#1\endcsname}
985 \def\thePersonalURL#1{\csname thePersonalURL#1\endcsname}
986 \def\theORCID#1{\csname theORCID#1\endcsname}

```

The standard way of listing authors is to iterate from 1 to \count@ and to pick the author names as we go.

```

987 {!!\def\newcount{\tempcnta}
988 \def\@defaultauthorlist{%
989   \getauthorlist\@firstofone
990 }

```

\@getauthorlist processes the author list, passing every bit of stuff that needs to be typeset to the macro specified as its argument.

```

991 \def\@getauthorlist#1{%
992   \count@\authornumber
993   \advance\count@ by -2
994   \tempcnta0

```

Loop to output the first $n - 2$ of the n authors (the loop does nothing if there are two or fewer authors)

```

995   \loop
996     \ifnum\count@>0
997       \advance\@tempcnta by \@ne
998       #1{\ignorespaces\theauthor{\number\@tempcnta}\unskip, }%
999       \advance\count@ by \m@ne
1000   \repeat
1001 \count@\authornumber
1002 \advance\count@ by -\@tempcnta
1003 \ifnum\authornumber>0

```

If there are two or more authors, we output the penultimate author's name here, followed by 'and'

```

1004   \ifnum\count@>1
1005     \count@\authornumber
1006     \advance\count@ by \m@ne
1007     #1{\ignorespaces\theauthor{\number\count@}\unskip\@tubauthorlastsep}%
1008   \fi

```

Finally (if there were any authors at all) output the last author's name:

```

1009   #1{\ignorespaces\theauthor{\number\authornumber}\unskip}
1010   \fi
1011 }
1012 %
1013 \def\@tubauthorlastsep{, }% until 2018, was: "\ and "

```

Signature blocks. The author can (in principle) define a different sort of signature block using `\signature`, though this could well cause the editorial group to have collective kittens (unless it had been discussed in advance...)

```

1014 \def\signature#1{\def\@signature{#1}}
1015 \def\@signature{\@defaultsignature}

```

`\@defaultsignature` loops through all the authors, outputting the details we have about that author, or (if we're in a sub-article) outputs the contributor's name and closes the group opened by `\contributor`. It is (as its name implies) the default body for `\makesignature`

```

1016 \def\@defaultsignature{{%
1017   \let\thanks\gobble
1018   \frenchspacing
1019   %

```

The idea here is that if multiple authors share affiliation information, we need only typeset the affiliation once. We separate by commas for the `\maketitle`, and put on separate lines, also with commas, in the `\makesignature`.

Similarly, within `\netaddress`, `!tubmultipleaffilnet` separates with a space before and after the comma. (All this per bb.) See `tb122childstrotter.ltx`, `tb131sojka-czech.ltx` for examples.

```

1072 \def\tubmultipleaffilauthor{\unskip,\ \ignorespaces}%
1073 \def\tubmultipleaffilnet{\unskip\textrm{.,}\ \ignorespaces}%

```

Now all the awful machinery of author definitions. `\authornumber` records the number of authors we have recorded to date.

```

1074 \newcount\authornumber
1075 \authornumber=0

```

`\author` ‘allocates’ another author name (by bumping `\authornumber`) and also sets up the address and netaddress for this author to produce a warning and to prevent oddities if they’re invoked. This last assumes that invocation will be in the context of `\signature` (`ltugboat.cls`) or `\maketitle` (`ltugproc.cls`); in both cases, invocation is followed by a line break (tabular line break `\`\\` in `ltugproc`, `\endgraf` in `\makesignature` in `ltugboat`).

```

1076 \def\author{%
1077   \global\advance\authornumber\@ne
1078   \TB@author
1079 }

```

`\contributor` is for a small part of a multiple-part article; it begins a group that will be ended in `\makesignature`.

```

1080 \def\contributor{%
1081   \begingroup
1082   \authornumber\m@ne
1083   \TB@author
1084 }

```

Both ‘types’ of author fall through here to set up the author name and to initialise author-related things. `\EDITORno*` commands allow the editor to record that there’s good reason for an *address* or *netaddress* not to be there (the *personalURL* and *ORCID* are optional anyway).

```

1085 \def\TB@author#1{%
1086   \expandafter\def\csname theauthor\number\authornumber\endcsname

1172   {\leavevmode \ignorespaces {\SMC ORCID} #1\unskip}}
```

For the online re-publication (as of 2009) by Mathematical Sciences Publishers <http://mathscipub.org>, lots and lots of metadata is needed, much of it redundant with things we already do. They are flexible enough to allow us to specify it in any reasonable way, so let’s make one command `\mspmetavar` which takes two arguments. Example: `\mspmetavar{volumenumber}{30}`. For our purposes, it is just a no-op. And this initiative never came to anything, so it is not used at all.

```
\mspmetavar
1173 \def\mspmetavar#1#2{}
```

3.14 Article title

`\if@articletitle \maketitle` takes an optional “*”; if present, the operation is not defining the `\maketitle` title of a paper, merely that of a “business” section (such as the participants at `\@r@maketitle` a meeting) that has no credited author or other title. In this case, the command flushes out the latest `\sectitle` (or whatever) but does nothing else.

Provide machinery (`\PreTitleDrop` to skip extra space, even one or more full columns, above the top of an article to leave space to paste up a previous article that has finished on the same page. This is a fall back to accommodate the fact that multiple articles cannot be run together easily.

In addition, if the `secondcolstart` option was specified, do `\null\newpage` to move over. This is separate from `\PreTitleDrop`, for no particular reason.

```
1174 \newif\if@articletitle
1175 \def\maketitle{\ifstar

3.15 Section titles

The following macros are used to set the large *TUGboat* section heads (e.g. “General Delivery”, “Fonts”, etc.)

Define the distance between articles which are run together:

```
1212 \def\secsep{\vskip 5\baselineskip}
```

Note that \stbaselineskip is used in the definition of \sectitlefont, in
 $\text{\LaTeX} 2_{\varepsilon}$, so that it has (at least) to be defined before \sectitlefont is used (we
do the whole job).

```

1213 \newdimen\stbaselineskip          \stbaselineskip=18\p@
1214 \newdimen\stfontheight
1215 \settoheight{\stfontheight}{\sectitlefont 0}

```

Declaring section titles; the conditional \ifSecTitle records the occurrence
of a \sectitle command. If (when) a subsequent \maketitle occurs, the section
title box will get flushed out; as a result of this, one could in principle have a set of
\sectitle commands in a semi-fixed steering file, and inclusions of files inserted
only as and when papers have appeared. Only the last \sectitle will actually
be executed.

```

1216 \newif\ifWideSecTitle
1217 \newif\iftubtitlerulefullwidth
1218 \newif\ifSecTitle \SecTitlefalse
1219 \newcommand{\sectitle}{%
1220   \SecTitletrue
1221   \@ifstar
1222     {\WideSecTitletrue\def\s@ctitle}{%

```

```
1223     {\WideSecTitlefalse\def\s@ctitle}%
1224 }
```

\PreTitleDrop records the amount of column-space we need to eject before we start any given paper. It gets zeroed after that ejection has happened.

```
1225 \newdimen\PreTitleDrop \PreTitleDrop=\z@
```

The other parameters used in \@sectitle; I don't think there's the slightest requirement for them to be registers (since they're constant values, AFAIK), but converting them to macros would remove the essentially useless functionality of being able to change them using assignment, which I'm not about to struggle with just now...

\AboveTitleSkip and \BelowTitleSkip are what you'd expect; \strulethickness is the value to use for \fboxrule when setting the title, and for the rule above titles when there is no box.

```
1226 \newskip\AboveTitleSkip \AboveTitleSkip=12\p@
1227 \newskip\BelowTitleSkip \BelowTitleSkip=8\p@
1228 \newdimen\strulethickness \strulethickness=.6\p@
```

\@sectitle actually generates the section title (in a rather generous box). It gets called from \maketitle under conditional \ifSecTitle; by the time \@sectitle takes control, we already have \SecTitlefalse. This implementation uses L^AT_EX's \framebox command, on the grounds that one doesn't keep a dog and bark for oneself...

```
1229 \def\@sectitle #1{%
1230   \par
1231   \penalty-1000
```

If we're setting a wide title, the stuff will be at the top of a page (let alone a column) but inside a box, so that the separator won't be discardable: so don't create the separator in this case.

```
1232 \ifWideSecTitle\else\secsep\fi
1233 {%

3.16 Section headings

Redefine style of section headings to match plain *TUGboat*. Negative beforeskip suppresses following parindent. (So negate the stretch and shrink too).

These macros are called `*head` in the plain styles.

Relaying via `\TB@startsection` detects inappropriate use of `\section*`. Of course, if (when) *we* use it, we need to avoid that relaying; this can be done by letting `\TB@startsection` to `\TB@safe@startsection`, within a group.

First the version for use in the default case, when class option `NUMBERSEC` is in effect.

The `\tubsecfmt` macro defines our standard formatting for section titles: ragged right, french spacing, no hyphenation. The `\tubsechook` macro allows overriding the defaults.

```
1342 \def\tubsechook{}  
1343 \def\tubsecfmt{\normalsize\bf\raggedright\frenchspacing\nohyphens\tubsechook}  
1344 %  
1345 \if@numbersec  
1346   \def\section{\TB@startsection{section}{  
1347     1%  
1348     \z@  
1349     {-8\p@ \oplus-2\p@ \ominus-2\p@}%  
1350     {4\p@}}%  
1351   {\tubsecfmt}}}  
1352 \def\subsection{\TB@startsection{subsection}{  
1353   2%  
1354   \z@  
1355   {-8\p@ \oplus-2\p@ \ominus-2\p@}%  
1356   {4\p@}}%  
1357   {\tubsecfmt}}}  
1358 \def\subsubsection{\TB@startsection{subsubsection}{  
1359   3%  
1360   \z@  
1361   {-8\p@ \oplus-2\p@ \ominus-2\p@}%  
1362   {4\p@}}%  
1363   {\tubsecfmt}}}  
1364 \def\paragraph{\TB@startsection{paragraph}{  
1365   4%  
1366   \z@  
1367   {4\p@ \oplus1\p@ \ominus1\p@}%  
1368   {-1em}}%  
1369   {\normalsize\bf\tubsechook}}}
```

Now the version if class option `NONUMBER` is in effect, i.e., if `\if@numbersec` is false.

```
1370 \else  
1371   \setcounter{secnumdepth}{0}  
1372   \def\section{\TB@nolimelabel  
1373     \TB@startsection{section}{  
1374       1%  
1375       \z@  
1376       {-8\p@ \oplus-2\p@ \ominus-2\p@}%  
1377       {4\p@}}%  
1378     {\tubsecfmt}}}
```

```

1379 \def\subsection{\TB@nolimelabel
1380         \TB@startsection{{subsection}}%
1381         2%
1382         \z@%
1383         {-8\p@ \cplus-2\p@ \cminus-2\p@}%
1384         {-0.5em\cplus-\fontdimen3\font}%
1385         {\tubsecfmt}}}
1386 \def\subsubsection{\TB@nolimelabel
1387         \TB@startsection{{subsubsection}}%
1388         3%
1389         \parindent%
1390         {-8\p@ \cplus-2\p@ \cminus-2\p@}%
1391         {-0.5em\cplus-\fontdimen3\font}%
1392         {\tubsecfmt}}}
1393 \fi

```

`\TB@startsection` used to warn about `*` versions of sectioning commands when numbering wasn't in effect. But that eventually seemed a useless complaint, since it can be useful to switch back and forth between numbered and unnumbered can be useful during article development. So now `\TB@startsection` is just a synonym for `\@startsection`.

```
1394 \def\TB@startsection#1{\@startsection#1}%
```

`\TB@safe@startsection` is to be used where `\section*` (etc.) appear in places where the request is OK (because it's built in to some macro we don't fiddle with).

```
1395 \def\TB@safe@startsection#1{\@startsection#1}
```

The `SafeSection` environment allows use of `*-forms` of sectioning environments. It's not documented for the general public: it's intended as an editor's facility.

```

1396 \newenvironment{SafeSection}%
1397   {\let\TB@startsection\TB@safe@startsection}%
1398   {}
```

And now for the exciting sectioning commands that L^AT_EX defines but we don't have a definition for (whatever else, we don't want Lamport's originals, which come out 'like the blare of a bugle in a lullaby'¹).

The three inappropriate ones are subparagraph (indistinguishable from paragraph), and chapter and part. The last seemed almost to be defined in an early version of these macros, since there was a definition of `\l@part`. I've not got down to where that came from (or why). If class option NONUMBER is in effect, we also suppress `\paragraph`, since it has no parallel in the plain style.

```

1399 \if@numbersec
1400   \def\subparagraph{\TB@nosection\subparagraph\paragraph}%
1401 \else
1402   \def\paragraph{\TB@nosection\paragraph\subsubsection}%
1403   \def\subparagraph{\TB@nosection\subparagraph\subsubsection}%
1404 \fi
1405 \def\chapter{\TB@nosection\chapter\section}%
1406 \def\part{\TB@nosection\part\section}%

```

¹Thurber, *The Wonderful O*

```

1407 \def\TB@nosection#1#2{\TBWarning{class does not support \string#1,
1408     \string#2\space used instead}#2}

```

\l@<sectioning-name> is for table of contents (of an article). We define new macros to allow easily changing the font used for toc entries (for *TUGboat*, we usually want roman, not bold), and the space between entries. Nelson Beebe and Frank Mittelbach's articles often have toc's (and few others). Also turn off microtype protrusion after

Contents

or leaders get messed up.

```

1409 \def\TBtocsectionfont{\normalfont}
1410 \newskip\TBtocsectionspace \TBtocsectionspace=1.0ex\@plus\p@
1411 % |#1| is both the section number and title; |#2| is the page number.

```

```

1449     \fi
1450   }\par
1451 \endgroup}

```

3.17 Appendices

Appendices (which are really just another sort of section heading) raise a problem: if the sections are unnumbered, we plainly need to restore the section numbering, which in turn allows labelling of section numbers again (`\TBnolimelabel` happens before the `\refstepcounter`, so its effects get lost ... what a clever piece of design that was). So here we go:

```

1452 \renewcommand{\appendix}{\par
1453   \renewcommand{\thesection}{\@Alph\c@section}%
1454   \setcounter{section}{0}%
1455   \if@numbersec
1456   \else
1457     \setcounter{secnumdepth}{1}%
1458   \fi

```

Now: is this the start of an appendix environment? This can be detected by looking at `\@currenvir`; if we are, we need to relay to `\@appendix@env` to pick up the optional argument.

```

1459 \def\@tempa{appendix}
1460 \ifx\@tempa\@currenvir
1461   \expandafter\@appendix@env
1462 \fi
1463 }

```

Here we deal with `\begin{appendix}[\langle app-name\rangle]`

```

1464 \newcommand{\app@prefix@section}{}%
1465 \newcommand{\@appendix@env}[1][Appendix]{%
1466   \renewcommand{\seccntformat}[1]{\csname app@prefix@\#1\endcsname
1467   \csname the\#1\endcsname\quad}%
1468   \renewcommand{\app@prefix@section}{\#1}%
1469 }

```

Ending an appendix environment is pretty trivial...

```

1470 \let\endappendix\relax

```

3.18 References

If the sections aren't numbered, the natural tendency of the author to cross-reference (which, after all, is one of the things L^AT_EX is for ever being advertised as being good at) can cause headaches.

The following command is used by each of the sectioning commands to make a following `\ref` command bloop at the author. Even if the author then ignores the complaint, the poor old editor may find the offending `\label` rather more easily.

(Note that macro name is to be read as “*noli me label*” (I don't know the mediaeval Latin for ‘label’)).

Comment To come (perhaps): detection of the act of labelling, and an analogue of `\ifG@refundefined` for this sort of label

```

1471 \def\TB@nolimelabel{%
1472   \def\@currentlabel{%
1473     \protect\TBTWarning{%
1474       Invalid reference to numbered label on page \thepage
1475       \MessageBreak made%
1476     }%
1477     \textbf{?}%
1478   }%
1479 }

```

3.19 Title references

This is a first cut at a mechanism for referencing by the title of a section; it employs the delightfully simple idea Sebastian Rahtz has in the `nameref` package (which is part of `hyperref`). As it stands, it lacks some of the bells and whistles of the original, but they could be added; this is merely proof-of-concept.

The name label comes from the moveable bit of the section argument; we subvert the `\@sect` and `\@ssect` commands (the latter deals with starred section commands) to grab the relevant argument.

As of the June 2023 L^AT_EX (or somewhat earlier, but this is good enough), there are hooks that allow us to avoid redefining `\@sect` and `\@ssect`.

```

1480 \cfile@r\fmtversion{2023-06-01}{%
1481 \let\TB@@sect\@sect
1482 \let\TB@@ssect\@ssect
1483 \def\@sect#1#2#3#4#5#6[#7]#8{%
1484   \def\@currentlabelname{#7}%
1485   \TB@@sect{#1}{#2}{#3}{#4}{#5}{#6}{#7}{#8}%
1486 }
1487 \def\@ssect#1#2#3#4#5{%
1488   \def\@currentlabelname{#5}%
1489   \TB@@ssect{#1}{#2}{#3}{#4}{#5}%
1490 }
1491 } % LaTeX earlier than June 2023

```

We output the name label as a second `\newlabel` command in the `.aux` file. That way, packages such as `varioref` which also read the `.aux` information can still work. So we redefine `\label` to first call the standard L^AT_EX `\label` and then write our named label as `nr<label>`.

Similarly, we only need this with pre-June 2023 L^AT_EX. With more recent L^AT_EX, define `currentlabelname` via hooks.

```

1492 \cfile@r\fmtversion{2023-06-01}{%
1493   \AddToHookWithArguments{cmd/@sect/before}{\def\@currentlabelname{#7}}%
1494   \AddToHookWithArguments{cmd/@ssect/before}{\def\@currentlabelname{#5}}%
1495 }{%
1496   \let@savelatexlabel=\label % so save original LaTeX command
1497   %
1498   \def\label#1{%
1499     \savelatexlabel{#1}%
1500     \bsphack
1501     \if@filesw
1502       \protected@write\auxout{}{%
1503         \string\newlabel{nr@#1}{\@currentlabelname}%
1504       }%
1505     \fi
}

```

```

1505     \@esphack}
1506 % in case there are no sectioning commands:
1507 \let\@currentlabelname\empty
1508 }

```

Getting named references is then just like getting page references in the L^AT_EX kernel (see `ltxref.dtx`).

The above was written by RobinF decades ago; the macros in *TUGboat* were never changed. Meanwhile, the `\nameref` in `hyperref` has changed many times, and we want to use its version if available. So we provide our `\nameref` `\AtBeginDocument`, so as not to overwrite any previous version. Until May 2022, `hyperref` silently overwrote an existing definition, that is, *TUGboat*'s. But now it is no longer silent.

It seems that all the internal definitions above do not cause problems, so just let them alone.

```

1509 \AtBeginDocument{%
1510   \@ifl@t@r\fmtversion{2023-06-01}%
1511   { % after June 2023, LaTeX stores the label name; use that.
1512     \long\def\@thirdoffive#1#2#3#4#5{#3}
1513     \providecommand\nameref[1]{%
1514       \expandafter\@setref
1515       \csname r@#1\endcsname\@thirdoffive{#1}}%
1516   }
1517   { % for earlier versions, still avoid overwriting \nameref per above.
1518     % but if not otherwise defined, use the "nr" label defined by our \label.
1519     \providecommand\nameref[1]{%
1520       \expandafter\@setref
1521       \csname r@nr@#1\endcsname\@secondoftwo{#1}}%
1522   }%
1523 }

```

3.20 Float captions

By analogy with what we've just done to section titles and the like, we now do our best to discourage hyphenation within captions. We also typeset them in `\small` (actually `\tubcaptionfonts`).

First, let's define a dimension by which we will indent full-page captions. We'll also use this to indent abstracts in proceedings style.

```

\@tubfullpageindent

```

3.23 Some fun with verbatim

The plain *TUGboat* style allows [optional] arguments to its `\verb+at+` command. This will allow the author (or editor) to specify a range of exciting features; we would definitely like the numbered verbatim style for code (that facility is reserved for a future version of this package), and the present little bit of code imposes the `\rule` option on the built-in `\verb+` environment. (Note that we don't yet deal with `\verb+*`, which is in itself an option to the `plain` original.)

We start by saving various bits and bobs whose operation we're going to subvert.

```

1626 \%let\@TB@\verb+at+\@verb+at+
1627 \let\@TBverb+at+\verb+at+
1628 \let\@TBendverb+at+\endverb+at+

```

Impose an optional argument on the environment.

We start the macro with `\par` to avoid a common error: if the optional argument is `\small`, and the document has no blank line before the verbatim block, we don't want that preceding paragraph to be set with `\small`'s line spacing.

(`\obeylines` added to prevent the `\futurelet` from propagating into the body of the verbatim, thus causing lines that start with odd characters (like `#` or even `\`) to behave peculiarly.)

```

1629 \def\verb+at+\par\obeylines
1630 \futurelet\reserved@a\@switch@sqbverb+at+
1631 %
1632 \def\@switch@sqbverb+at+\ifx\reserved@a[%
1633   \expandafter\@sbverb+at+\else
1634   \def\reserved@b{\@sbverb[]}\expandafter\reserved@b\fi}
1635 %
1636 \def\@sbverb[#1]{%

```

The optional argument consists entirely of functions that modify the appearance of the environment. Following the `plain` style, we define the functions we can execute in the optional argument here.

The command `\rule` tells us that there should be rules above and below the verbatim block.

```
1637 \def\rule{\let\if@ruled\iftrue}%

```

The command `\makevmeta` says to make `!j...j` do `<...>`.

```

1638 \def\makevmeta{\makeescape\! \let\<\tubverb@meta \tubverb@clearlist}
1639 \def\tubverb@meta##1>{\meta{##1}}

```

The default verbatim defines “*\-*” as active characters to stop ligatures; remove *\-* from the list so we get normal characters. Just hope that the CM *\-* ligatures aren’t used.

```
1640 \def\tubverb@clearliglist{%
1641   \def\verbatim@nolig@list{\do{\`}\do{\,\do{\'}\do{\-}}{}}%
1642 }
```

Then we execute the arguments we’ve got, and relay to a (hacked) copy of the L^AT_EX verbatim environment.

```
1643 #1\@TBverbatim}
```

The built-in environment itself relays to `\@verbatim`, which we’ve subverted to impose our views on appearance.

```
1644 \def\@verbatim{%
```

First, we deal with `\ruled`:

```
1645 \if@ruled\trivlist\item\hrule\kern5\p@\nobreak\fi
```

Now, the code out of the original `verbatim` environment:

```
1646 \trivlist \item\relax
1647 \if@minipage\else\vskip\parskip\fi
1648 \leftskip\@totalleftmargin\rightskip\z@skip
1649 \parindent\z@ \parfillskip\@flushglue\parskip\z@skip
1650 \@@par
1651 \tempswafalse
1652 \def\par{%
1653   \if@tempswa
1654     \leavevemode \null \@@par\penalty\interlinepenalty
1655   \else
1656     \tempswatrue
1657     \ifhmode\@@par\penalty\interlinepenalty\fi
1658   \fi}%
1659 \obeylines \verbatim@font \noligs
1660 \let\do\@makeother \dospecials
1661 \everypar \expandafter{\the\everypar \unpenalty}%
1662 }% end |\@sqbverbatim|
```

To end the environment, we do everything in reverse order: relay via the copy we made of `\endverbatim`, and then finish off the option changes (again `\ruled` only, so far).

```
1663 \def\endverbatim{\@TBendverbatim
1664 \if@ruled\kern5\p@\hrule\endtrivlist\fi}
```

Define the `\if` used by the `\ruled` option:

```
1665 \let\if@ruled\iffalse
```

Finally, if `microtype` is loaded, we want it to be deactivated in verbatim blocks. It often manipulates a leading `\` rather too much, thus messing with the visible fixed-width alignment.

```
1666 \AtBeginDocument{%
1667   \@ifpackageloaded{microtype}{%
1668     {\g@addto@macro\@verbatim{\microtypesetup{activate=false}}}{}}{}%
1669 }
```

3.24 Bibliography

This is more or less copied verbatim from Glenn Paulley's *chicago.sty* (`gnpaulle@bluebox.uwaterloo.ca`). It produces an author-year citation style bibliography, using output from the `BIBTEX` style file based on that by Patrick Daly. It needs extra macros beyond those in standard `LATEX` to function properly. The form of the bibitem entries is:

```
\bibitem[\protect\citeauthoryear{Jones, Baker, and Smith}{Jones et al.}{1990}{key}...]
```

The available citation commands are:

```
\cite{key}      → (Jones, Baker, and Smith 1990)
\citeA{key}    → (Jones, Baker, and Smith)
\citeNP{key}   → Jones, Baker, and Smith 1990
\citeANP{key}  → Jones, Baker, and Smith
\citeN{key}    → Jones, Baker, and Smith (1990)
\shortcite   → (Jones et al. 1990)
\citeyear    → (1990)
\citeyearNP  → 1990
```

First of all (after checking that we're to use Harvard citation at all), make a copy of `LATEX`'s default citation mechanism.

```
1670 \if@Harvardcite
1671 \let\@internalcite\cite
```

Normal forms.

```

```

`\thebibliography` If the user's asked to use L^AT_EX's default citation mechanism (using the `rawcite` `\TB@@thebibliography` option), we still need to patch `\sloppy` to support justification of the body of the bibliography. We kludge in a call to `\frenchspacing` too, since there is no reason to change only period's `\sfcode`, as L^AT_EX's original `thebibliography` (in `classes.dtx`) does.

By the way, `amsgen.sty` changes `\frenchspacing` to set the `\sfcode` of punctuation character to successively decreasing integers ending at 1001 for comma. Thus its 1006 for period is overwritten to 1000 for `thebibliography`, making `amsgen`'s `\@addpunct` ineffective. Don't know what that means in practice, if anything.

Back here, we also play with *The T_EXbook*@startsection since we always have, though that is no longer needed.

```

1771 \else % not harvardcite
1772 \let\TB@origthebibliography\thebibliography
1773 \def\thebibliography{%
1774   \let\TB@startsection\TB@safe@startsection

1777 \fi % not harvardcite

```

`\BibJustification` `\BibJustification` defines how the bibliography is to be justified. The Lamport `\SetBibJustification` default is simply “`\sloppy`”, but we regularly find some sort of ragged right setting `\TB@@sloppy` is appropriate. (`\BibJustification` is nevertheless reset to its default value at the start of a paper.)

```

Typeset the doi. The format we decided on looks like: <https://doi.org/10.47397/tb/41-3/tb129> where the last element is the \jobname.

We put this below the footnote. The footer definitions above specify that it is always called, even if the regular footer is empty.

If the article started in the second column (option [secondcolstart]), we manually move the doi over.

We do not check for validity of \volno, \issno, \jobname. For testing, etc., seems simpler to just typeset what we've got. Other scripts will verify consistency.

3.27 Output routine

Modified to alter `\brokenpenalty` across columns

Comment We're playing with fire here: for example, `\outputdblcol` has changed in L^AT_EX 2_< for 1995/06/01 (with the use of `\hb@xt@`). This time there's no semantic change, but...

```
1906 \def\outputdblcol{\if@firstcolumn \global\@firstcolumnfalse
1907   \global\setbox\@leftcolumn\box\@outputbox
1908   \global\brokenpenalty10000
1909 \else \global\@firstcolumntrue
1910   \global\brokenpenalty100
1911   \setbox\@outputbox\vbox{\hb@xt@\textwidth{\hb@xt@\columnwidth
1912     {\box\@leftcolumn \hss}\hfil \vrule \@width\columnsep\hfil
1913     \hb@xt@\columnwidth{\box\@outputbox \hss}}}\@combinedblfloats
1914   \outputpage \begingroup \@dblfloatplacement \@startdblcolumn
1915   \whilesw\if\fcolmade \fi{\outputpage\@startdblcolumn}\endgroup
1916 \fi}
```

3.28 Font-related definitions and machinery

These are mostly for compatibility with plain `tugboat.sty`

```
1917 \newif\ifFirstPar \FirstParfalse
1918 \def\smc{\sc}
1919 \def\ninepoint{\small}
1920 </clastail>
```

`\SMC` isn't small caps—Barbara Beeton says she thinks of it as “big small caps”. She says (modulo capitalisation of things...):

For the things it's used for, regular small caps are not appropriate—they're too small. Real small caps are appropriate for author names (and are so used in continental bibliographies), section headings, running heads, and, on occasion, words to which some emphasis is to be given. `\SMC` was designed to be used for acronyms and all-caps abbreviations, which look terrible in small caps, but nearly as bad in all caps in the regular text size. The principle of using “one size smaller” than the text size is similar to the design of caps in German—where they are smaller relative to lowercase than are caps in fonts intended for English, to improve the appearance of regular text in which caps are used at the heads of all nouns, not just at the beginnings of sentences.

We define this in terms of the memory of the size currently selected that's maintained in `\@currsize`: if the user does something silly re. selecting fonts, we'll get the wrong results. The following code is adapted from an old version of `relsize.sty` by Donald Arseneau and Matt Swift. (The order of examination of `\@currsize` is to get the commonest cases out of the way first.)

```
1921 <*common>
1922 \DeclareRobustCommand{\SMC}{%
1923   \ifx\@currsize\normalsize\small\else
1924   \ifx\@currsize\small\footnotesize\else
```

```

1925   \ifx\@currsize\footnotesize\scriptsize\else
1926     \ifx\@currsize\large\normalsize\else
1927       \ifx\@currsize\Large\large\else
1928         \ifx\@currsize\LARGE\Large\else
1929           \ifx\@currsize\scriptsize\tiny\else
1930             \ifx\@currsize\tiny\tiny\else
1931               \ifx\@currsize\huge\LARGE\else
1932                 \ifx\@currsize\Huge\huge\else
1933                   \small\SMC@unknown@warning
1934     \fi\fi\fi\fi\fi\fi\fi
1935 }
1936 \newcommand{\SMC@unknown@warning}{\TWarning{\string\SMC: nonstandard
1937   text font size command -- using \string\small}}
1938 \newcommand{\textSMC}[1]{\{\SMC #1\}}

```

The `\acro` command uses `\SMC` as it was originally intended. Since these things are uppercase-only, it fiddles with the spacefactor after inserting its text.

```

1939 \newcommand{\acro}[1]{\textSMC{#1}\@}
1940 
```

3.29 Editor's notes and other footnotes

`\EdNote` allows the editor to enter notes in the text of a paper. If the command is given something that appears like an optional argument, the entire text of the note is placed in square brackets. (Yes, it really is!)

```

1941 <*classtail>

3.30 Initialization

If we’re going to use Harvard-style bibliographies, we set up the bibliography style: the user doesn’t get any choice. (Not recommended.)

```

1997 \if@Harvardcite
1998   \AtBeginDocument{%
1999     \bibliographystyle{ltugbib}%
2000   }
2001 \fi
2002 \authornumber\z@%
2003 \let\@signature\@defaultsignature
2004 \InputIfFileExists{ltugboat.cfg}{\TBInfo{Loading ltugboat
2005                                     configuration information}}{}%
2006 </clastail>

```

4 L^AT_EX 2 _{ϵ} Proceedings class

\@tugclass Make the code of `ltugboat.cls` (when we load it) say it's really us:

```
2007 <*ltugprocls>
2008 \def\@tugclass{ltugproc}
```

\if@proc@sober TUG'96 proceedings switched to more sober headings still; so the `tug95` option
\if@proc@enumerable establishes the original state. In the absence of any other guidance, we use the '96
for TUG'97 proceedings, but also allow numbering of sections.

```
2009 \newif\if@proc@sober
2010 \newif\if@proc@enumerable
2011 \DeclareOption{tug95}{%
2012   \@proc@soberfalse
2013   \@proc@enumerablefalse
2014 }
2015 \DeclareOption{tug96}{%
2016   \@proc@sobertrue
2017   \@proc@enumerablefalse
2018 }
2019 \DeclareOption{tug97}{%
2020   \@proc@sobertrue
2021   \@proc@enumerabletrue
2022 }
2023 \DeclareOption{tug2002}{%
2024   \@proc@sobertrue
2025   \@proc@enumerabletrue
2026   \let\if@proc@numbersec\iftrue
2027   \PassOptionsToClass{numbersec}{ltugboat}%
2028 }
```

\if@proc@numbersec If we're in a class that allows section numbering (the actual check occurs after
\ProcessOptions, we can have the following:

```
2029 \DeclareOption{numbersec}{\let\if@proc@numbersec\iftrue
2030   \PassOptionsToClass{numbersec}{ltugboat}%
2031 }
2032 \DeclareOption{nonumber}{\let\if@proc@numbersec\iffalse
2033   \PassOptionsToClass{nonumber}{ltugboat}%
2034 }
```

\ifTB@title If we have a paper for which we want to create a detached title, with an editor's
note, and then set the paper separately, we use option `notitle`.

```
2035 \newif\ifTB@title
2036 \DeclareOption{title}{\TB@titletrue}
2037 \DeclareOption{notitle}{\TB@titlefalse
2038   \AtBeginDocument{\stepcounter{page}}}
```

There are these people who seem to think `tugproc` is an option as well as a
class...

```
2039 \DeclareOption{tugproc}{%
2040   \ClassWarning{\@tugclass}{Option \CurrentOption\space ignored}%
2041 }
```

All other options are simply passed to `\ltugboat`...

```
2042 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{\ltugboat}}
```

If there's a `tugproc` defaults file, input it now: it may tell us which year we're to perform for... (Note: this code *is* millenium-proof. It's not terribly classy for years beyond 2069, but then I'm not going to be around then—this will be an interesting task for a future `TEXie`...)

```
2043 \InputIfFileExists{@tugclass.cfg}{\ClassInfo{\ltugproc}%
2044     {Loading \ltugproc configuration information}}{%
2045 \ifundefined{TUGprocExtraOptions}%
2046     {\let\TUGprocExtraOptions\empty}%
2047     {\edef\TUGprocExtraOptions{\TUGprocExtraOptions}}}
```

`\tugProcYear` Now work out what year it is

```
2048 \tempcnta\year
2049 \ifnum\tempcnta<2000
2050     \divide\tempcnta by100
2051     \multiply\tempcnta by100
2052     \advance\tempcnta-\year
2053     \tempcnta-\tempcnta
2054 \fi
```

And use that for calculating a year for us to use.

```
2055 \edef\tempa{\noexpand\providecommand\noexpand\tugProcYear
2056     {\ifnum10>\tempcnta\fi\the\tempcnta}}
2057 \tempa
2058 \ClassInfo{\ltugproc}{Class believes year is
2059     \expandafter\ifnum\tugProcYear<2000 19\fi\tugProcYear
2060     \gobble}
```

Check that this is a “sensible year” (one for which we have a class option defined). If not, make it a ‘suitable’ year, in particular, one that allows numbering sections.

```
2061 \expandafter\ifx\csname ds@tug\tugProcYear\endcsname\relax
2062     \def\tugProcYear{2002}\fi
```

Now execute the default ‘year’ option and get on with processing. Note that this command gets ignored if the configuration file specifies a silly year.

```
2063 \ExecuteOptions{tug\tugProcYear,title\TUGprocExtraOptions}
2064 \ProcessOptions
2065 \if@proc@numbersec
2066     \if@proc@numerable
2067     \else
2068         \ClassWarning{@tugclass}{This year's proceedings may not have
2069             numbered sections}%
2070     \fi
2071 \fi
```

Call `\ltugboat`, adding whichever section numbering option is appropriate

```
2072 \LoadClass[\if@proc@numbersec numbersec\else nonumber\fi]{\ltugboat}
```

4.1 Proceedings titles

\maketitle There's no provision for 'section titles' in proceedings issues, as there are in *TUG*.
\ifTB@madetitle *boat* proper. Note the tedious L^AT_EX bug-avoidance in the \CTB@test@document macro.

```
2073 \def\maketitle{%
2074   \begingroup
```

first, a bit of flim-flam to generate an initial value for \rhAuthor (unless the user's already given one with a \shortAuthor command).

```

\@abstract@getbody gets chunks of the body (up to the next occurrence of \end) and appends them to \abstract@toks. It then uses \@abstract@findend to detect whether this \end is followed by {abstract}

```

2166 \long\def\@abstract@getbody#1\end{%
2167   \global\abstract@toks\expandafter{\the\abstract@toks#1}%
2168   \@abstract@findend}

```

Here we've got to \end in the body of the abstract. \@abstract@findend takes the ‘argument’ of the \end do its argument.

```

2169 \def\@abstract@findend#1{%
2170   \def\@tempa{#1}%

```

If we've found an ‘end’ to match the ‘begin’ that we started with, we're done with gathering the abstract up; otherwise we stuff the end itself into the token register and carry on.

```

2171  \ifx\@tempa\@abstract@
2172    \expandafter\@abstract@end
2173  \else

```

It's not \end{abstract}—check that it's not \end{document} either (which signifies that the author's forgotten about ending the abstract)

```

2174  \def\@tempb{document}%
2175  \ifx\@tempa\@tempb
2176    \TBEerror{\string\begin{\@abstract@}%
2177      ended by \string\end{\@tempb}}%
2178    {You've forgotten \string\end{\@abstract@}}
2179  \else
2180    \global\abstract@toks\expandafter{\the\abstract@toks\end{#1}}%
2181    \expandafter\expandafter\expandafter\@abstract@getbody
2182  \fi
2183 \fi}

```

In our case, the action at the ‘proper’ \end is a lot simpler than what appears in tabularx.dtx ... don't be surprised!

```

2184 \def\@abstract@end{\ifnum0='}\fi}%
2185 \expandafter\end\expandafter{\@abstract@}}

```

```

4.2 Section divisions

Neither sections nor subsections are numbered by default in the proceedings style: note that this puts a degree of stress on authors' natural tendency to reference sections, which is a matter that needs attention. The class option NUMBERSEC once again numbers the sections (and noticeably changes the layout).

```

2228 \if@proc@numbersec
2229 \else
2230   \setcounter{secnumdepth}{0}
2231 \fi

```

Otherwise, the `\section` command is pretty straightforward. However, the `\subsection` and `\subsubsection` are run-in, and we have to remember to have negative stretch (and shrink if we should in future choose to have one) on the `afterskip` parameter of `\@startsection`, since the whole skip is going to end up getting negated. We use `\TB@startsection` to detect inappropriate forms.

```
